## Chapter 21 ELEMENT

### INTRODUCTION

THE words atom and element express basic notions in the analysis of matter. To some extent their meaning seems to be the same. Atoms or elements are usually understood to be ultimate units, the parts out of which other things are formed by combination. But as soon as further questions are asked—about the divisibility or indivisibility of these units or about their number and variety—we are confronted with differing conceptions of the atom and with a theory of the elements which is opposed to the atomic analysis of matter.

Even when the two notions are not opposed to one another they are not interchangeable.

Atom has a much narrower meaning. It usually designates a small particle of matter whereas element signifies the least part into which anything at all can be divided. It is this broader meaning of element which permits Euclid to call his collection of the theorems in terms of which all geometric problems can be solved the elements of geometry. According to Aristotle this is true not only of geometrical proofs but also in general of the elements of demonstration for the primary demonstrations each of which is implied in many demonstrations he says are called elements of demonstration. From this it follows that elements will be found in any subject matter or science in which analysis occurs and not only in physics.

An element writes Nicomachus in his *Introduction to Arithmetic* is the smallest thing which enters into the composition of an object and the least thing into which it can be analyzed. Letters for example are called the elements of literate speech for out of them all articulate speech is composed and into them finally it is resolved. Sounds are the elements of all melody for they are the beginning of its

composition and into them it is resolved. The so called four elements of the universe in general are simple bodies fire water air and earth for out of them in the first instance we account for the constitution of the universe and into them finally we conceive of it as being resolved.

This explains why books in so many different fields have the word element in their titles. There are the elements of grammar or logic the elements of language or music the elements of psychology or economics. Elements in one subject matter or science are analogous to elements in another because in each sphere they stand to everything else as the simple to the complex the pure to the mixed the parts to the whole. Thus the factors of price may be said to function in economic analysis as do the parts of speech in grammatical analysis.

Another illustration comes from the theory of the four bodily humors in ancient physiology. In the traditional enumeration which goes back to Hippocrates they are blood phlegm yellow bile and black bile and they function analytically as do fire water air and earth in ancient physics. They make up the nature of the body of man according to a Hippocratic treatise on the nature of man and through them he feels pain or enjoys health. Perfect health is enjoyed by a man when these elements are duly proportioned to one another in respect of compounding power and bulk and when they are perfectly mingled. Galen in an analysis of temperaments explains all varieties of temperament and all complexions of physique in terms of these humors either by their mixture or by the predominance of one or another. Thus the sanguine phlegmatic choleric or melancholic temperament is accounted for by the excess of one and a deficiency of the other humors.

Still also her physiological application of the notion of element is to be found in the ancient division of tissue into flesh and bone or in the more elaborate modern analysis of the types of cells which comprise all living matter.

These illustrations indicate that the irreducibility of elements to anything simpler than themselves does not necessarily mean that they are absolutely indivisible. Cells can be further divided into nucleus, protoplasm, and membrane without ceasing to be the elements of tissue. The parts of speech—nouns, verbs, adjectives—can be further divided into syllables and letters without ceasing to be the elements of significant utterance. Letters, treated as the elements of language can be physically divided. The fact that terms are sometimes regarded as the logical elements out of which propositions and inferences are formed does not prevent a distinction from being made between simple and complex terms. Nicomachus calls the triangle the elementary among all plane figures, for even this, also, is resolved into it, but it into nothing, else—but the triangle is divisible into the lines which compose it and these lines in turn are divisible into points.

When Nicomachus says that the triangle is the element of all other figures "and has itself no element" he does not mean that the triangle is absolutely indivisible, but only relatively so. Relative to the analysis of plane figures there is no simpler figure out of which the triangle can be formed. Similarly relative to the analysis of significant speech there is no simpler part than the word. Relative to the analysis of melody there is no simpler part than the tone. Musical tones may be physically but they are not musically complex.

The definition of element can also be approached by comparing its meaning with that of principle and cause. All three terms are brought together by Aristotle in the beginning of his Physics when he declares that we attain scientific knowledge through acquaintance with the principles, causes, and elements" of things.

The word principle occurs almost as frequently as element in the titles of books which claim to be basic expositions or analyses.

The two words are often used as synonymous. La Mettrie, for example, says that we can use "the term *element* or *principle* of bodies to express our idea of the last point which analysis is capable of reaching."

To discover any difference in the meaning of "element" and "principle" it is necessary to specify their correlates precisely. Out of elements, compounds or matters are formed. From principles, consequences are derived. In logic, for example we say that terms are the elements of propositions (the proposition Socrates is a man comprises the terms Socrates and man) but we say that axioms are the principles from which conclusions are derived. This does not prevent the same thing from being viewed in different connections as both element and principle—as an element because it is the simple part out of which a more complex whole is composed and as a principle because it is the source from which something else is derived. The parts of speech in grammar are the elementary components of phrases and sentences; they are also the principles from which the rules of syntax are derived.

The third notion which belongs with element and principle is cause. Its correlate is effect. Again it can be said that that which is an element in one connection and a principle in another can be regarded as a cause from still a third point of view. In Aristotle's physical treatises, for example matter is regarded in all three ways: it is an element of all bodies, for they are substances composed of matter and form; it is a principle of change since from matter form and privation change is derived; it is a cause (i.e., the material cause) of certain results.

But it must also be observed that everything which is any one of these three is not necessarily both of the others also. Since an element according to Aristotle is a component ingredient in a thing, anything that is an extrinsic principle or cause cannot be an element. Thus the action of one body upon another is a cause and a principle but not an element. Referring to these distinctions, Aquinas declares that *principle* is a wider term than *cause*: just as *cause* is more common than *element*. The chapters on Cause and Principle tend to substantiate this observation about the scope of these ideas in the tradition of western thought.

## Chapter 21 ELEMENT

### INTRODUCTION

THE words atom and element express basic notions in the analysis of matter. To some extent their meaning seems to be the same. Atoms or elements are usually understood to be ultimate units the parts out of which other things are formed by combination. But as soon as further questions are asked—about the divisibility or indivisibility of these units or about their number and variety—we are confronted with differing conceptions of the atom and with a theory of the elements which is opposed to the atomic analysis of matter.

Even when the two notions are not opposed to one another they are not interchangeable. Atom has a much narrower meaning. It usually designates a small particle of matter whereas element signifies the least part into which anything at all can be divided. It is this broader meaning of element which permits Euclid to call his collection of the theorems in terms of which all geometric problems can be solved the elements of geometry. According to Aristotle this is true not only of geometrical proofs but also in general of the elements of demonstration for the primary demonstrations each of which is implied in many demonstrations he says are called elements of demonstration. From this it follows that elements will be found in any subject matter or science in which analysis occurs and not only in physics.

An element writes Nicomachus in his *Introduction to Arithmetic* is the smallest thing which enters into the composition of an object and the least thing into which it can be analyzed. Letters for example are called the elements of literate speech for out of them all articulate speech is composed and into them finally it is resolved. Sounds are the elements of all melody for they are the beginning of its

composition and into them it is resolved. The so called four elements of the universe in general are simple bodies fire water air and earth for out of them in the first instance we account for the constitution of the universe and into them finally we conceive of it as being resolved.

This explains why books in so many different fields have the word element in their titles. There are the elements of grammar or logic the elements of language or music the elements of psychology or economics. Elements in one subject matter or science are analogous to elements in another because in each sphere they stand to everything else as the simple to the complex the pure to the mixed the parts to the whole. Thus the factors of price may be said to function in economic analysis as do the parts of speech in grammatical analysis.

Another illustration comes from the theory of the four bodily humors in ancient physiology. In the traditional enumeration which goes back to Hippocrates they are blood phlegm yellow bile and black bile and they function analytically as do fire water air and earth in ancient physics. They make up the nature of the body of man according to a Hippocratic treatise on the nature of man and through them he feels pain or enjoys health. Perfect health is enjoyed by a man when these elements are duly proportioned to one another in respect of compounding power and bulk and when they are perfectly mingled. Galen in an analysis of temperaments explains all varieties of temperament and all complexities of physique in terms of these humors either by their mixture or by the predominance of one or another. Thus the sanguine phlegmatic choleric or melancholic temperament is accounted for by the excess of one and a deficiency of the other humors.

tive indivisibility. The atom is the least quantity of matter. It cannot be broken into quantitative parts. The elementary body is not atomic. It is always capable of division into smaller units but all of these units must be of the same kind as the elementary body under going division.

The element is indivisible only in the sense that it cannot be decomposed into other kind of matter as a mixed body can be decomposed into its diverse elements. The atom can not be divided in any way. Only compound bodies can be divided into their constituent atoms all of which are alike in kind differing only quantitatively—in size shape or weight. Different kinds of matter occur only on the level of compounds and as the result of diverse combinations of atoms.

This last point indicates another contrast between atoms and elements in ancient physical theory. The elements are defined as we have seen by their qualitative differences from one another or more strictly according to combinations of elementary sensible qualities—hot and cold moist and dry. By virtue of the qualities peculiar to them the four elements stand in a certain order to one another. Water and air according to Plato are in the mean between fire and earth and have the same proportion so far as possible as fire is to air so is air to water and air is to water so is water to earth. The quality which two of the elements have in common provides the mean. Thus fire and air are joined by the common quality of hot air and water by moist and water and earth by cold.

When their analysis reached its greatest refinement the ancients recognized that the earth air fire and water of common experience do not actually have the purity requisite for element. They are not simple but blended. Aristotle writes and while the elements are indeed similar in nature to them [they] are not identical with them. The element corresponding to fire is such as fire not fire that which corresponds to air is such as air and so on with the rest of them. Thus the four elements are only analogous to for they are purer than ordinary earth air fire and water yet their names continued to be used as symbols for the true elements a connotation which is

still retained when we speak of men struggling against or battling with the elements.

It will no doubt be a matter of surprise Lavoisier writes in the Preface to his *Elements of Chemistry* that in a treatise upon the elements of chemistry there should be no chapter on the constituent and elementary parts of matter but I shall take occasion in this place to remark that the fondness for reducing all the bodies in nature to three or four elements proceeds from a prejudice which has descended to us from the Greek philosophers. The notion of four elements which by the variety of their proportions compose all the known substances in nature is a mere hypothesis, assumed long before the first principles of experimental philosophy or of chemistry had any existence.

This does not mean that Lavoisier entirely rejects the notion of elements in chemical analysis. On the contrary he says that we must admit as elements all the substances into which we are capable by any means to reduce bodies by decomposition. His quarrel with the ancients chiefly concerns two points. The first is on the number of the elements which he thinks experiment has shown to be much greater than the four of classical theory. The second is on the simplicity of the experimentally discovered elements. They can be called atoms or simple bodies only if we do not thereby imply that we know them to be absolutely indivisible—either qualitatively or quantitatively. We are not entitled to affirm that these substances we consider as simple may not be compounded of two or even of a greater number of principles merely because we have not yet discovered the means of separating them.

In modern physics and chemistry the distinction between element and atom seems to be abolished. The same unit of matter is at once both an atom and an element. The table of atomic weights is also a chart of the elements. The classification of atoms is both quantitative and qualitative—qualitative in the sense that the atoms of different elementary kinds of matter differ in their active properties.

According to the ancient meaning of the terms, the molecule would seem to be both a mixture and a compound—mixed in that it can

THE BASIC ISSUES concerning elements occur in the analysis of matter. Before Plato and Aristotle the early Greek physicists had asked such questions as 'From what do all things come?' 'Of what are all things made?' A number of answers were given ranging from one kind of ultimate such as earth or fire through a small set of ultimate kinds to an infinite variety. The classical theory of the four elements is the middle answer avoiding the extremes of unity and infinity.

According to Galen it was Hippocrates who first took in hand to demonstrate that there are in all four mutually interacting qualities and who provided at least the beginnings of the proofs to which Aristotle later set his hand in developing the theory of the four elements. Galen also indicates that it was a subject of controversy among the ancients whether the substances as well as the qualities of the four elements undergo this intimate mingling from which results the genesis and destruction of all things that come into and pass out of being.

Aristotle in his treatise *On Generation and Corruption* enumerates the various senses in which the physicist considers elements. We have to recognize three originative sources (or elements) he writes firstly that which is potentially perceptible body; secondly the contrarieties (e.g. heat and cold) and thirdly Fire Water and the like. The potentially perceptible body is identified with prime matter and since this has no separate existence but is always bound up with a contrariety it can be ruled out from the usual notion of element. The elementary qualities the contrarieties named secondly are the hot and cold and dry and moist. The so called elements Fire Air Water and Earth are left to the last and are mentioned only thirdly. Aristotle says because they change into one another whereas the contrarieties do not change.

The elementary qualities attach themselves by couples to the apparently simple bodies. In consequence Aristotle writes 'Fire is hot and dry whereas Air is hot and moist and Water is cold and moist while Earth is cold and dry'. Each of them however is characterized *par excellence* by a single quality

In terms of these simple bodies and the elementary qualities all other material things can be explained.

In contrast to the elements stand the mixed or compound bodies in the constitution of which two or more elements combine. There may be many kinds of mixed bodies but none is irreducible in kind as are the four elements. Any mixed body can be divided into the different kinds of elementary bodies which compose it whereas the elementary bodies cannot be divided into parts which are different in kind from themselves. A living body for example may contain parts of earth and water but the parts of earth are earth the parts of water water.

It is precisely the mode of divisibility that Aristotle declares is the fundamental question. In answering this question he opposes the theory of the four elements to another Greek account of the constitution of matter—the atomic theory developed by Leucippus and Democritus and expounded for us in Lucretius' poem *On the Nature of Things*.

According to the Greek atomists matter is not infinitely divisible. If nature had set no limit to the breaking of things Lucretius writes by this time the bodies of matter could have been so far reduced that nothing could within a fixed time be conceived out of them and reach its utmost growth of being. There must then be a fixed limit to their breaking—a limit in physical division which ultimately reaches units of matter that are absolutely indivisible. Lucretius calls them first beginnings of solid singleness not compounded out of a union of parts but rather strong in everlasting singleness—the seed of things or atoms. The Greek word from which atom comes literally means *uncuttable*.

From this it is evident that Aristotle can deny the existence of atoms while at the same time he affirms the existence of elementary bodies. The elements unlike the atoms are not conceived as indivisible in *quantitas* but only as incapable of division into diverse kinds of matter.

In the Greek conception of atom and element the difference between them lies in this distinction between quantitative and qualita-

stance of nature and the indestructibility of matter depend on the absolute solidity and impenetrability of matter's ultimate parts. The negative arguments of Aristotle and Descartes proceed from the divisibility of whatever is continuous to the conclusion that any unit of matter must have parts.

The philosophical doctrine of atomism in the form in which Lucretius adopts it from Epicurus insists upon void as the other basic principle of the universe. Nature, he writes, is founded on two things: there are bodies and there is void in which these bodies are placed and through which they move about. Compound bodies are divisible because the atoms of which they are composed are not absolutely continuous with one another but are separated by void or empty space. That is why they are not solid or impenetrable as are the atomic particles which are composed of matter entirely without void. In Newton's language hardness must be reckoned the property of all uncompounded matter, for if compound bodies are so very hard as we find some of them to be and yet are very porous, how much harder must be simple particles which are void of pores?

The opponents of atomism tend to deny the existence not only of atoms but of the void as well. Descartes, for example, denies that there can be any atoms or parts of matter which are divisible of their own nature. For however small the parts are supposed to be, yet because they are necessarily extended, we are always able in thought to divide any one of them into two or more parts. For the same reason he maintains there cannot be a space in which there is no substance because the extension of space or internal place is not different from that of body. The physical world, therefore, is conceived as what the ancients called a plenum, continuously filled with matter. This controversy over void and plenum is elaborated in the chapter on SPACE.

Although he uses the language of the atomist, Faraday seems to agree with Descartes rather than with Newton. He pictures matter as continuous throughout with no distinction between its atoms and any intervening space. Atoms, he thinks, instead of being absolutely hard are highly elastic and they are

all mutually penetrable. He compares the combination and separation of two atoms with the conjunction of two sea waves of different velocities into one, their perfect union for a time and final separation into the constituent waves. Such a view of the constitution of matter, Faraday writes, leads to the conclusion that matter fills all space or at least all space to which gravitation extends.

The very continuity—the voidlessness or lack of pores—which the opponents of atomism insist is the source of matter's infinite divisibility the atomists seem to give as the reason why the ultimate particles are without parts, hence simple, solid and indivisible.

ON STILL OTHER POINTS there is disagreement among the atomists themselves. Not all of them go to the extreme of denying existence or reality to anything immaterial nor do all insist that whatever exists is either an atom or made up of atoms and void. In the tradition of the great books the extreme doctrine is found in Lucretius alone. Though it is shared by Hobbes and is reflected in the *Lettathan*, it is not expounded there. It is developed in his treatise *Concerning Body*.

For Lucretius the atoms are eternal as well as indestructible. The first beginnings of all other things are themselves without beginning. In time gone by Lucretius writes, they moved in the same way in which now they move and will ever hereafter be borne along in like manner through an endless succession of worlds each of which comes to be through a concourse of atoms each in turn perishing, as with decay that concourse is dissolved. Newton writes in what seems to be a contrary vein. It seems probable to me, he says, that God in the beginning formed matter in solid, massy, hard, impenetrable, movable particles. All material things, he continues, seem to have been composed of the hard and solid particles above mentioned variously associated in the first Creation by the counsel of an intelligent Agent.

Nor does Newton appeal to the properties and motions of the ultimate particles except to explain the characteristics and laws of the physical world. Unlike Lucretius and Hobbes he does not—and there seems to be some evidence

be broken up into other kinds of matter compound in that it can be divided into smaller units of matter But in modern theory the meanings of compound and mixture have also changed the molecule being classified as a compound rather than a mixture The combination of the elements to form molecular compounds is determined by the proportion of their weights or valences rather than by a fusion of their qualities

The most radical change in theory is not this however nor is it the increase in the number of the elements from four to more than ninety four nor the ordering of the elements by reference to their atomic weights rather than by the contrariety of their qualities It results from the discovery that an atom is not uncuttable and that new elements can be produced by atomic fission Faraday's experimental work in ionization and in electrochemical decomposition lies at the beginning of the physical researches which have penetrated the interior structure of the atom and isolated smaller units of matter Even before atoms were experimentally exploded analysis had pictured them as constituted by positive and negative charges

As the result of his researches Faraday for example conceives of atoms as mere centres of forces or powers not particles of matter in which the powers themselves reside The atom thus ceases to be a little unchangeable impenetrable piece of matter and consists of the powers it exercises What was ordinarily referred to under the term *shape* becomes the disposition and relative intensity of the forces that are observed

With Faraday it is evident that the meaning of atom has departed far from the sense in which Lucretius speaks of units of solid singleness or Newton of solid massy hard impenetrable movable particles incomparably harder than any porous bodies compounded of them even so very hard as never to wear or break in pieces no ordinary power being able to divide what God himself made one in the first creation With the conception of the elements as different kinds of atoms then with the discovery of radioactive elements undergoing slow disintegration finally with the production of isotopes and new elements through

atomic change the meaning of 'element' has moved equally far from its original sense

DO THESE ALTERED meanings change the basic issues in the philosophy of nature? Are these issues resolved or rendered meaningless by experimental science?

The central point in the theory of elements is an irreducible qualitative diversity in kinds of matter The elements of modern chemistry may no longer be elementary types of matter in the strict sense of the word but the kind of difference which would be strictly elemental may be found in the distinction of the positive the negative and the neutral with respect to the electrical charge of sub atomic particles

Similarly the central point in atomism as a philosophy of nature is the existence of absolutely indivisible units or quanta of matter in other words the denial that matter is infinitely divisible that any particle no matter how small is capable of being broken into smaller parts The strict conception of the atom is therefore not invalidated by the experimental discovery that the particles called atoms are not atomic that they are themselves complex structures of moving particles and that they can be physically divided

It makes no difference to the philosophical atomist whether the particles which constitute molecules or the particles—the electrons and protons the neutrons and mesons—which constitute atoms are atomic Even if further experimental work should succeed in dividing these sub atomic particles the question could still be asked Is matter infinitely divisible regardless of our actual power to continue making divisions *ad infinitum*? Since the question when thus formulated cannot be put to experimental test the issue concerning atoms would remain

That issue would not refer to any particle of matter defined at a certain stage of physical analysis or experimental discovery It would consist in the opposition of two views of the nature of matter and the constitution of the material universe the affirmation on the one hand that truly atomic particles must exist and the denial on the other that no particle of matter can be atomic The affirmative arguments of Lucretius and Newton make the con-

size of nature and the indestructibility of matter depend on the absolute solidity and impenetrability of matter's ultimate parts. The proceeds from the divisibility of whatever is continuous to the conclusion that any unit of matter must have parts.

The philosophical doctrine of atomism in the form in which Lucretius adopts it from Epicurus, insists upon void as the other basic principle of the universe. Nature, he writes, is founded on two things: there are bodies and there is void in which these bodies are placed and through which they move about. Compound bodies are divisible because the atoms of which they are composed are not absolutely continuous with one another but are separated by void or empty space. That is why they are not solid or impenetrable as are the atomic particles which are composed of matter entirely without void. In Newton's language hardness must be reckoned the property of all uncompounded matter, for if "compound bodies are so very hard as we find some of them to be and yet are very porous, how much harder must be simple particles which are void of pores."

The opponents of atomism tend to deny the existence not only of atoms, but of the void as well. Descartes, for example, denies that there can be any atoms or parts of matter which are indevisible of their own nature. For however small the parts are supposed to be yet because they are necessarily extended we are always able in thought to divide any one of them into two or more parts." For the same reason he maintains there cannot be a place in which there is no substance because the extension of space or eternal place is not different from that of body. The physical world on the view is conceived as what the ancients called a plenum, continuously filled with matter. This controvery over void and plenum is elaborated in the chapter on SPACE.

Although he uses the language of the atomist Faraday seems to agree with Descartes rather than with Newton. He pictures matter as "continuous throughout" with no distinction between its atoms and any intervening space. Atoms, he thinks, instead of being absolutely hard are "inelastic" and they are

all mutually penetrable. He compares the combination and separation of two atoms with the conjunction of two sea waves of different velocities into one their perfect union for a time and final separation into the constituent waves. Such a view of the constitution of matter Faraday writes, leads to the conclusion that matter fills all space or at least all space to which gravitation extends.

The very continuity—the voidlessness or lack of pores—which the opponents of atomism insist is the source of matter's infinite divisibility the atomists seem to give as the reason why the ultimate particles are without parts, hence simple solid and indivisible.

ON STILL OTHER POINTS there is disagreement among the atomists themselves. Not all of them go to the extreme of denying existence or reality to anything immaterial nor do all insist that whatever exists is either an atom or made up of atoms and void. In the tradition of the great books the extreme doctrine is found in Lucretius alone. Though it is shared by Hobbes and is reflected in the *Lettres*, it is not expounded there. It is developed in his treatise *Concerning Body*.

For Lucretius, the atoms are eternal as well as indestructible. The first beginnings of all other things are themselves without beginning. In time gone by Lucretius writes, they moved in the same way in which now they move and will ever hereafter be borne along in like manner through an endless succession of worlds each of which comes to be through a concourse of atoms, each in turn perishing, as with decay that concourse is dissolved. Newton writes in what seems to be a contrary vein. It seems probable to me he says, that God in the beginning formed matter in solid, massy, hard, impenetrable movable particles. "All material things," he continues, "seem to have been composed of the hard and solid particles above mentioned variously associated in the first Creation by the counsel of an intelligent Agent."

Nor does Newton appeal to the properties and motions of the ultimate particles except to explain the characteristics and laws of the physical world. Unlike Lucretius and Hobbes, he does not—and there seems to be some evidence

in the *Optics* that he would not—reduce the soul of man to a flow of extremely mobile atoms or attempt to account for all psychological phenomena (thought as well as sensation and memory) in terms of atom buffeting atom

The atomic theory of the cause of sensation is not limited to the materialists. Writers like Locke who conceive man as having a spiritual nature as well as a body adopt an atomistic view of the material world. The different motions and figures bulk and number of such particles he writes affecting the several organs of our senses produce in us those different sensations which we have from the colours and

smells of bodies. Furthermore the distinction which is here implicit—between primary and secondary sense qualities—is not peculiar to atomism. It can also be found in a critic of atomism like Descartes.

The atomistic account of sensation is nevertheless of critical significance in the controversy concerning this type of materialism. Critics of atomism have contended that the truth of atomism as a materialistic philosophy can be no greater than the measure of its success in explaining sensation—the source upon which the atomist himself relies for his knowledge of nature—in terms of the properties and motions of particles themselves imperceptible.

## OUTLINE OF TOPICS

1 The concept of element	407
2 The comparison of element principle and cause	
3 The theory of the elements in natural philosophy physics and chemistry	408
3a Element and atom qualitative and quantitative indivisibility	
3b The enumeration of the elements their properties and order	
3c The mutability of the elements their transmutation	
3d Combinations of the elements compounds and mixtures	409
4 The discovery of elements in other arts and sciences	
5 The theory of atomism critiques of atomism	410
5a The conception of atomic bodies imperceptible indestructible and indivisible	
5b Arguments for and against the existence of atoms the issue concerning the infinite divisibility of matter	
5c Atoms and the void as the ultimate constituents of reality	
5d The number variety and properties of atoms the production of sensible things by their collocation	411
5e The atomistic account of sensation and thought the <i>idola</i>	
5f The atomic constitution of mind and soul its bearing on immortality	
5g The explanation of natural phenomena by reference to the properties and motions of atoms	
5h The atomistic account of the origin and decay of the world its evolution and order	412

## REFERENCES

To find the passage cited use the numbers in heavy type which are the volume and page numbers of the passage referred to. For example in 4 HOUWER *Il ad* BK II [265 283] 12d the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

P.C. See no. 5. When the text is printed in two columns the letters a and b refer to the upper and lower halves of the page. For example in 53 JESUS *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page; c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

AUTHORS D. 1. 10<sup>th</sup>. One or more of the main divisions of a work (such as PARTS BK CHAPS etc) are sometimes included in the reference line numbers, in brackets, are given in certain cases e.g. *Il ad* BK II [265 283] 12d.

BIBL. REG. & C. Th. refers to a chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT *Achæmon* 7:45—(D) *Il Est ass 7:46*

SYNOPSIS. Th. abbreviates call the reader's attention to one or more especially relevant parts of a whole reference passage. It signifies that the top cited is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style for general guidance in the use of *The Guide to Old Testament References*.

## Chapter 22. EMOTION

### INTRODUCTION

THE emotions claim our attention in two ways. We experience them sometimes in a manner which overwhelms us and we analyze them by defining and classifying the several passions and by studying their role in human life and society. We seldom do both at once for analysis requires emotional detachment and moments of passion do not permit study or reflect on.

With regard to the emotions the great books are similarly divided into two sorts—those which are theoretical discussions and those which concretely describe the passions of particular men exhibit their vigor and induce in us a vicarious experience. Books of the first sort are scientific philosophical or theological treatises. Books of the second sort are the great epic and dramatic poems the novels, the literature of biography and history.

We customarily think of the emotions as belonging to the subject matter of psychology—proper to the science of animal and human behav. It is worth noting therefore that this is largely a recent development which appears in the works of Darwin, James and Freud. In earlier centuries, the analysis of the passions occurs in other contexts in treatments of rhetoric as in certain dialogues of Plato and in Aristotle's *Rhetoric* in the Greek discussions of virtue and vice in the moral theology of Aquinas and in Spinoza's *Ethics* and in books of political theory such as Machiavelli's *Prince* and Hobbes' *Leviathan*.

Descartes' treatise on *The Passions of the Soul* is probably one of the first discourses on the subject to be separated from the practical considerations of oratory, morals, and politics. Only subsequently do the emotions become an object of purely theoretical interest in psychology. But even then the interest of the psychiatrist or

psychoanalyst—to the extent that it is medical or therapeutic—has a strong practical bent.

In the great works of poetry and history no similar shift takes place as one goes from Homer and Virgil to Tolstoy and Dostoevsky, from Greek to Shakespearean tragedy, from Plutarch and Tacitus to Gibbon. What Wordsworth said of the lyric poem—that it is emotion recollected in tranquillity—may not apply to the narratives in an identical sense. Yet they too re-enact the passions in all their vitality. Their pages are filled with the emotions of men in conflict with one another or suffering conflict within themselves.

This is no less true of historical narrative than of fiction. The memorable actions of men on the stage of history did not occur in calm and quiet. We would certainly not remember them as well if the historian failed to re-create for us the turbulence of crisis and catastrophe or the biographer the storm and stress which accompanies the inward resolution of heroic lives.

It is impossible of course to cite all the relevant passages of poetry and history. In many instances, nothing less than a whole book would suffice. The particular references given in this chapter which are far from exhaustive have been selected for their peculiar exemplarity significance in relation to a particular topic but for the whole range of topics connected with emotion the reader should certainly seek further in the realms of history and poetry for the raw materials which the scientists and philosophers have tried to analyze and understand.

To the student of the emotions Bacon recommends the poets and writers of histories as "the best doctors of this knowledge where we may find painted forth with great life how affections are kindled and inflamed and how pacified and restrained and how again contained from act and further degree how they

disclose themselves how they work how they vary how they gather and fortify how they are enwrapped one within another and how they do fight and encounter one with another and other like particularities

FOUR WORDS—passion affection or affect and emotion—have been traditionally used to designate the same psychological fact Of these affection and affect have ceased to be generally current although we do find them in Freud and passion is now usually restricted to mean one of the emotions or the more violent aspect of any emotional experience But if we are to connect discussions collected from widely separated centuries we must be able to use all these words interchangeably

The psychological fact to which they all refer is one every human being has experienced in moments of great excitement especially during intense seizure by rage or fear In his treatise *On the Circulation of the Blood* Harvey calls attention to the fact that in almost every affection appetite hope or fear our body suffers the countenance changes and the blood appears to course hither and thither In anger the eyes are fiery and the pupils contracted in modesty the cheeks are suffused with blushes in fear and under a sense of infamy and of shame the face is pale and in lust how quickly is the member distended with blood and erected!

Emotional experience seems to involve an awareness of widespread bodily commotion which includes changes in the tension of the blood vessels and the muscles changes in heart beat and breathing changes in the condition of the skin and other tissues Though some degree of bodily disturbance would seem to be an essential ingredient in all emotional experience the intensity and extent of the physiological reverberation or bodily commotion is not the same or equal in all the emotions Some emotions are much more violent than others This leads William James to distinguish what he calls the coarser emotions in which every one recognizes a strong organic reverberation from the subtler emotions in which the organic reverberation is less obvious and strong

This fact is sometimes used to draw the line between what are truly emotions and what are

only mild feelings of pleasure and pain or even during sentiments Nevertheless sentiments may be emotional residues—stable attitudes which pervade a life even during moments of emotional detachment and calm—and pleasure and pain may color all the emotions Pleasure and pain Locke suggests are the hinges on which our passions turn Even though they may not be passions in the strict sense they are obviously closely connected with them

THAT THE EMOTIONS are organic disturbances upsetting the normal course of the body's functioning is sometimes thought to be a modern discovery connected with the James Lange theory that the emotional experience is nothing but the feeling of the bodily changes which follow directly the perception of the exciting fact On this view the explanation of emotion seems to be the very opposite of common sense which says we meet a bear are frightened and run According to James this order of sequence is incorrect and the more rational statement is that we feel afraid because we tremble In other words we do not run away because we are afraid but are afraid because we run away

This fact about the emotions was known to antiquity and the Middle Ages Aristotle for example holds that mere awareness of an object does not induce flight unless the heart is moved and Aquinas declares that passion is properly to be found where there is corporeal transmutation He describes at some length the bodily changes which take place in anger and fear Only very recently however have apparatus and techniques been devised for recording and in some cases measuring the physiological changes accompanying experimentally produced emotions—in both animals and men

Modern theory also tries to throw some light on these organic changes by pointing out their adaptive utility in the struggle for existence This type of explanation is advanced by Darwin in *The Expression of Emotions in Man and Animals* and is adopted by other evolutionists The snarl or sneer the one sided uncovering of the upper teeth James writes is accounted for by Darwin as a survival from the time when our ancestors had large canines and unsheathed them (as dogs now do) for attack

The distention of the nostrils in anger is interpreted by Spencer as an echo of the way in which our ancestors had to breathe when, during combat their mouth was filled up by a part of the antagonist's body that had been seized.

The reddening of the face and neck, is called by Wundt a compensatory arrangement for relieving the brain of the blood pressure which the simultaneous excitement of the heart brings with it. The effusion of tears is explained both by this author and by Darwin to be a blood withdrawing agency of a similar sort.

Reviewing statements of this sort James is willing to concede that some movements of expression can be accounted for as weakened repetitions of movements which formerly (when they were stronger) were of utility to the subject but though we may thus see the reason for a few emotional reactions he thinks others remain for which no plausible reason can even be conceived. The latter James suggests, may be reactions which are purely mechanical results of the way in which our nervous centres are framed reactions which although permanent in us now may be called accidental as far as their origin goes.

Whether or not all the bodily changes which occur in such emotions as anger or fear serve the purpose of increasing the animal's efficiency in combat or flight—as for example the increase of sugar in the blood and the greater supply of blood to arms and legs seem to do—the basic emotions are generally thought to be connected with the instinctively determined pattern of behavior which animals struggle to survive. The actions we call instinctive James writes are expressions or manifestations of the emotions or as other writers suggest an emotion whether in outward expressiveness or inner experience is the central phase of an instinct in operation.

The observation of the close relation between instinct and emotion does not belong exclusively to modern or post-Darwinian thought. The ancients also recognized it though in different ways. Following Aristotle's analysis of the interior senses Aquinas for example knew the creative power by which animals seem to be innately prepared to react to things useful or harmful.

If an animal were moved by pleasure and

disagreeable things only as affecting the sense—that is the exterior senses—there would be no need to suppose Aquinas writes that an animal has a power besides the apprehension of those forms which the senses perceive and in which the animal takes pleasure or from which it shuns with horror. But animals need to seek or avoid certain things on account of their advantages or disadvantages and such emotional reactions of approach or avoidance require in his opinion a sense of the useful and the dangerous which is innate rather than learned. The estimative power thus seems to play a role which later writers assign to instinct. The relation of instinct to the emotions and to fundamental biological needs is further considered from other points of view in the chapters on DESIRE and HABIT.

**L**IKE DESIRE emotion is neither knowledge nor action but something intermediate between the one and the other. The various passions are usually aroused by objects perceived imagined or remembered and once aroused they in turn originate impulses to act in certain ways. For example fear arises with the perception of a threatening danger or with the imagination of some fancied peril. The thing feared is somehow recognized as capable of inflicting injury with consequent pain. The thing feared is also something from which one naturally tends to flee in order to avoid harm. Once the danger is known and until it is avoided by flight or in some other way the characteristic feeling of fear pervades the whole experience. It is partly a result of what is known and what is done and partly the cause of how things seem and how one behaves.

Analytically isolated from its causes and effects the emotion itself seems to be the feeling rather than the knowing or the doing. But it is not simply an awareness of a certain bodily condition. It also involves the felt impulse to do something about the object of the passion.

Those writers who like Aquinas identify emotion with the impulse by which the soul is drawn to the thing define the several passions as specifically different acts of appetite or desire—specific tendencies to action. Aquinas for instance adopts the definition given by Damascene. *Pascha* is a movement of the sensi-

tive appetite when we imagine good or evil

Other writers who like Spinoza find that the order of the actions and passions of our body is coincident in nature with the order of the actions and passions of the mind stress the cognitive rather than the impulsive aspect of emotion. They accordingly define the passions in terms of the characteristic feelings pleasant and unpleasant which flow from the estimation of certain objects as beneficial or harmful. Spinoza goes furthest in this direction when he says that an affect or passion of the mind is a confused idea by which the mind affirms of its body or any part of it a greater or less power of existence than before.

There seems to be no serious issue here for writers of both sorts acknowledge though with different emphasis the two sides of an emotion—the cognitive and the impulsive that which faces toward the object and that which leads into action. On either view the human passions are regarded as part of man's animal nature. It is generally admitted that disembodied spirits if such exist cannot have emotions. The angels Augustine writes feel no anger while they punish those whom the eternal law of God consigns to punishment no fellow feeling with misery while they relieve the miserable no fear while they aid those who are in danger. When we do ascribe emotions to spirits it is Augustine claims because though they have none of our weakness their acts resemble the actions to which these emotions move us.

In connection with the objects which arouse them the emotions necessarily depend upon the senses and the imagination and their perturbations and impulses require bodily organs for expression. That is why as indicated in the chapter on DESIRE some writers separate the passions from acts of the will as belonging to the sensitive or animal appetite rather than to the rational or specifically human appetite. Even those writers who do not place so high an estimate on the role of reason refer the emotions to the animal aspect of human behavior or to what is sometimes called man's lower nature. When this phrase is used it usually signifies the passions as opposed to the reason not the purely vegetative functions which man shares with plants as well as animals.

There seems to be no doubt that emotions

are common to men and animals and that they are more closely related to instinct than to reason or intelligence. Darwin presents many instances which he claims prove that the senses and intuitions the various emotions and faculties such as love memory attention curiosity imitation reason etc of which man boasts may be found in an incipient or even sometimes in a well developed condition in the lower animals. Where Darwin remarks upon the fewness and the comparative simplicity of the instincts in the higher animals in contrast with those of the lower animals James takes the position that man is the animal richest in instinctive impulses. However that issue is decided the emotions seem to be more elaborately developed in the higher animals and man's emotional life would seem to be the most complex and varied of all.

The question then arises whether particular passions are identical—or are only analogous—when they occur in men and animals. For example is human anger no matter how closely it resembles brute rage in its physiology and impulses nevertheless peculiarly human? Do men alone experience righteous indignation because of some admixture in them of reason and passion? When similar questions are asked about the sexual passions of men and animals the answers will determine the view one takes of the characteristically human aspects of love and hate. It may even be asked whether hate as men suffer it is ever experienced by brutes or whether certain passions such as hope and despair are known to brutes at all?

**IN THE TRADITIONAL** theory of the emotions the chief problem after the definition of emotion is the classification or grouping of the passions and the ordering of particular passions. The vocabulary of common speech in all ages and cultures includes a large number of words for naming emotions and it has been the task of analysts to decide which of these words designate distinct affects or affections. The precise character of the object and the direction of the impulse have been for the most part the criteria of definition. As previously noted it is but recently that the experimental observation of bodily changes has contributed to the differentiation of emotions from one another.

Spinoza offers the longest listing of the passions. For him the emotions, which are all "compounded of the three primary affects, desire joy and sorrow de elop into the following forms: astonishment, contempt, love, hatred, inclination, aversion, devotion, dension, hope, fear, confidence, despair, gladness, remorse, commiseration, favor, indignation, over estimation, envy, compassion, self-satisfaction, hubris, repentance, pride, despondency, self-exaltation, shame, regret, emulation, gratitude, benevolence, anger, vengeance, ferocity, audacity, consternation, courtesy, ambition, luxuriously, drunkenness, avarice, lust.

Many of the foregoing are for Hobbes, derived from what he calls the simple passions, which include appetite, desire, love, aversion, hate, joy, and grief. There are more emotions in Spinoza's list than either Aristotle or Locke or James mentions, but none which they in clause is omitted. Some of the items in Spinoza's enumeration are treated by other writers as virtues and vices rather than as passions.

The passions have been classified by reference to various criteria. As we have seen, James distinguishes emotions as "coarse" or "subtile" in terms of the violence or mildness of the accompanying physiological changes, and Spinoza distinguishes them according as the mind passes to a greater perfection or to a less perfection. Spinoza's division would also seem to imply a distinction between the beneficial and the harmful in the objects causing these two types of emotion, or at least to involve the opposite components of pleasure and pain; for in his view the emotions which correspond to a greater or less power of existence than before are attended in the one case by "pleasurable excitement" and in the other by "pain."

Hobbes uses another principle of division. The passions differ basically according to the direction of their impulses—according as each is a motion or endeavor to or from the object moving. Aquinas adds still another criterion—the difficulty or struggle in acquiring certain goods or in avoiding certain evils which in contrast to those we can easily acquire or avoid, make them, therefore, "of an arduous or difficult nature." In these terms, he divides all the passions into the "conceivable" which regard "good or evil

simply" (i.e. love, hate, desire, aversion, joy, sorrow) and the "inuscible" which regard good or evil as arduous through being difficult to obtain or avoid (i.e. fear, daring, hope, despair, anger).

Within each of these groups, Aquinas pairs particular passions as opposites, such as joy and sorrow, or hope and despair, either according to the contrariety of object (i.e., of good and evil) or according to approach and withdrawal. Anger seems to be the only passion for which no opposite can be given other than that cessation from its movement which Aristotle calls "calmness" and which Aquinas says is an opposite not by way of contrariety, but of negation or privation.

Using these distinctions, Aquinas also describes the order in which one passion leads to or generates another, beginning with love and hate passing through hope, desire, and fear with their opposites, and after anger ending in joy or despair. On one point all observers and theorists from Plato to Freud seem to agree: namely, that love and hate lie at the root of all the other passions and generate hope or despair, fear and anger according as the aspirations of love prosper or fail. Nor is the insight that even hate derives from love peculiarly modern; though Freud's theory of what he calls the "ambivalence of love and hate toward the same object" seems to be part of his own special contribution to our understanding of the passions.

**THE ROLE OF THE EMOTIONS OR PASSIONS IN HUMAN BEHAVIOR** has always raised two questions, one concerning the effect of conflict between diverse emotions, the other concerning the conflict between the passions and the reason or will. It is the latter question which has been of the greatest interest to moralists and statesmen.

Even though human emotions may have instinctive origin and be innately determined, man's emotional responses seem to be subject to voluntary control, so that men are able to form or change their emotional habits. If this were not so, there could be no moral problem of the regulation of the passions; nor for that matter could there be a medical problem of therapy for emotional disorders. The psychoanalytic treatment of neuroses seems, more-

tive appetite when we imagine good or evil

Other writers who like Spinoza find that the order of the actions and passions of our body is coincident in nature with the order of the actions and passions of the mind stress the cognitive rather than the impulsive aspect of emotion. They accordingly define the passions in terms of the characteristic feelings pleasant and unpleasant which flow from the estimation of certain objects as beneficial or harmful. Spinoza goes furthest in this direction when he says that an affect or passion of the mind is a confused idea by which the mind affirms of it body or any part of it a greater or less power of existence than before.

There seems to be no serious issue here for writers of both sorts acknowledge though with different emphasis the two sides of an emotion—the cognitive and the impulsive that which faces toward the object and that which leads into action. On either view the human passions are regarded as part of man's animal nature. It is generally admitted that disembodied spirits if such exist cannot have emotions. The angels Augustine writes feel no anger while they punish those whom the eternal law of God consigns to punishment no fellow feeling with misery while they relieve the miserable no fear while they aid those who are in danger. When we do ascribe emotions to spirits it is Augustine claims because though they have none of our weakness their acts resemble the actions to which these emotions move us.

In connection with the objects which arouse them the emotions necessarily depend upon the senses and the imagination and their perturbations and impulses require bodily organs for expression. This is why as indicated in the chapter on DESIRE some writers separate the passions from acts of the will as belonging to the sensitive or animal appetite rather than to the rational or specifically human appetite. Even those writers who do not place so high an estimate on the role of reason refer the emotions to the animal aspect of human behavior or to what is sometimes called man's lower nature. When this phrase is used it usually signifies the passions as opposed to the reason not the purely vegetative functions which man shares with plants as well as animals.

There seems to be no doubt that emotions

are common to men and animals and that they are more closely related to instinct than to reason or intelligence. Darwin presents many instances which he claims prove that "the senses and intuitions the various emotions and faculties such as love memory attention curiosity imitation reason etc of which man boasts may be found in an incipient or even sometimes in a well developed condition in the lower animals." Where Darwin remarks upon the fewness and the comparative simplicity of the instincts in the higher animals in contrast with those of the lower animals, James takes the position that man is the animal richest in instinctive impulses. However that issue is decided the emotions seem to be more elaborately developed in the higher animals and man's emotional life would seem to be the most complex and varied of all.

The question then arises whether particular passions are identical—or are only analogous—when they occur in men and animals. For example is human anger no matter how closely it resembles brute rage in its physiology and impulses nevertheless peculiarly human? Do men alone experience righteous indignation because of some admixture in them of reason and passion? When similar questions are asked about the sexual passions of men and animals, the answers will determine the view one takes of the characteristically human aspects of love and hate. It may even be asked whether hate as men suffer it is ever experienced by brutes or whether certain passions such as hope and despair are known to brutes at all?

IN THE TRADITIONAL theory of the emotions the chief problem after the definition of emotion is the classification or grouping of the passions and the ordering of particular passions. The vocabulary of common speech in all ages and cultures includes a large number of words for naming emotions and it has been the task of analysts to decide which of these words designate distinct affects or affections. The precise character of the object and the direction of the impulse have been for the most part the criteria of definition. As previously noted it is but recently that the experimental observation of bodily changes has contributed to the differentiation of emotions from one another.

for expressing emotional drives in action the ego supported by the super-ego represses the emotional or instinctual impulses, that is prevents them from expressing themselves overtly.

Freud's great insight is that emotions repressed do not atrophy and disappear. On the contrary their dammed up energies accumulate and like a sore they fester inwardly. Together with related ideas memories and wishes the repressed emotions form what Freud calls a complex, which is not only the active nucleus of emotional disorder but also the cause of neurotic symptoms and behavior—phobias and anxieties obsessions or compulsions and the various physical manifestations of hysteria such as a blindness or a paralysis that has no organic basis.

The line between the neurotic and the normal is shadowy for repressed emotional complexes are according to Freud also responsible for the hidden or latent psychological significance of slips of speech forgetting the content of dreams, occupational or marital choices and a wide variety of other phenomena usually regarded as accidental or as rationally determined. In fact Freud sometimes goes to the extreme of insisting that all apparently rational processes—both of thought and decision—are themselves emotionally determined and that most or all reasoning is nothing but the rationalization of emotionally fixed prejudices or beliefs. The ego he writes is after all only a part of the id a part positively modified by its proximity to the dangers of reality."

The ancient distinction between knowledge and opinion seems to be in essential agreement with the insight that emotions can control the course of thinking. But at the same time it denies that all thinking is necessarily dominated by the passions. The sort of thinking which is free from emotional bias or domination may result in knowledge if reason itself is not defective in its processes. But the sort of thinking which is directed and determined by the passions must result in opinion. The former is reasoning the latter what Freud calls rationalization or sometimes wishful thinking.

BECAUSE THEY CAN be ordered when they get out of order the emotions raise problems for both medicine and morals. Whether or not

there is a fundamental opposition between the medical and the moral approaches to the problem whether psychotherapy is needed only when morality has failed whether morality is itself partly responsible for the disorders which psychotherapy must cure the difference between the medical and the moral approaches is clear. Medically emotional disorders call for diagnosis and therapy. Morally they call for criticism and correction.

Human bondage according to Spinoza consists in the impotence of man to govern or restrain the affects for a man who is under their control is not his own master. A free man he describes as one who lives according to the dictates of reason alone and he tries to show how much reason itself can control the affects to achieve what he calls freedom of mind or blessedness. While moralists tend to agree on this point they do not all offer the same prescription for establishing the right relation between man's higher and lower natures.

The issue which arises here is also discussed in the chapters on DESIRE and DUTY. It exists between those who think that the passions are intrinsically evil the natural enemies of a good will lawless elements always in rebellion against duty and those who think that the passions represent a natural desire for certain goods which belong to the happy life or a natural aversion for certain evils.

Those who like the Stoics and Kant tend to adopt the former view recommend a policy of abstinence toward the passions. Their force must be attenuated in order to emancipate reason from their influence and to protect the will from their seductions. Nothing is lost according to this theory if the passions atrophy and die. But if according to the opposite doctrine the passions have a natural place in the moral life then the aim should be not to dispossess them entirely but to keep them in their place. Aristotle therefore recommends a policy of moderation. The passions can be made to serve reason's purposes by restraining them from excesses and by directing their energies to ends which reason approves.

As Aristotle conceives them certain of the virtues—especially temperance and courage—are stable emotional attitudes, or habits of emotional response which conform to reason and

over to assume the possibility of a voluntary or even a rational resolution of emotional conflicts—not perhaps without the aid of therapeutic efforts to uncover the sources of conflict and to remove the barriers between repressed emotion and rational decision.

The relation of the passions to the will especially their antagonism is relevant to the question whether the actions of men always conform to their judgments of good and evil or right and wrong. As Socrates discusses the problem of knowledge and virtue it would seem to be his view that a man who knows what is good for him will act accordingly. Men may desire things which they imagine to be good he says but which in reality are evil. Hence their misconduct will be due to a mistaken judgment not to a discrepancy between action and thought. Eliminating the case of erroneous judgment Socrates gets Meno to admit that no man wills or chooses anything evil.

Aristotle criticizes the Socratic position which he summarizes in the statement that no one

when he judges acts against what he judges best—people act badly only by reason of ignorance. According to Aristotle this view plainly contradicts the observed facts. Yet he admits that whatever a man does must at least seem good to him *at the moment* and to that extent the judgment that something is good or bad would seem to determine action accordingly. In his analysis of incontinence Aristotle tries to explain how a man may act against what is his better judgment and yet at the moment of action seek what he holds to be good.

Action may be caused either by a rational judgment concerning what is good or by an emotional estimate of the desirable. If these two factors are independent of one another—more than that if they can tend in opposite directions—then a man may act under emotional persuasion at one moment in a manner contrary to his rational predilection at another. That a man may act either emotionally or rationally Aristotle thinks explains how under strong emotional influences a man can do the very opposite of what his reason would tell him is right or good. The point is that while the emotions dominate his mind and action he does not listen to reason.

These matters are further discussed in the chapter on TEMPERANCE. But it should be noted here that the passions and the reason or the lower and the higher natures of man, are not always in conflict. Sometimes emotion or emotional attitudes serve reason by supporting voluntary decisions. They reinforce and make effective moral resolutions which might otherwise be too difficult to execute.

THE ANCIENTS DID NOT underestimate the force of the passions nor were they too confident of the strength of reason in its struggle to control them or to be free of them. They were acquainted with the violence of emotional excess which they called madness or frenzy. So too were the theologians of the Middle Ages and modern philosophers like Spinoza and Hobbes. But not until Freud—and perhaps also William James though to a lesser extent—do we find in the tradition of the great books insight into the pathology of the passions, the origin of emotional disorders and the general theory of the neuroses and neurotic character as the consequence of emotional repression.

For Freud the primary fact is not the conflict between reason and emotion or in his language between the *ego* and the *id*. It is rather the repression which results from such conflict. On the one side is the *ego* which stands for reason and circumspection and has the task of representing the external world or expressing what Freud calls the reality principle. Associated with the *ego* is the super *ego*—the vehicle of the ego ideal by which the *ego* measures itself towards which it strives and whose demands for ever increasing perfection it is always striving to fulfill. On the other side is the *id* which stands for the unattained passions and is the source of instinctual life.

The *ego* according to Freud is constantly attempting to mediate between the *id* and reality and to measure up to the ideal set by the super *ego* so as to dethrone the pleasure-principle which exerts undisputed sway over the processes in the *id* and substitute for it the reality principle which promises greater security and greater success. But sometimes it fails in this task. Sometimes when no socially acceptable channels of behavior are available

## OUTLINE OF TOPICS

1. The nature and causes of the emotions or passions
  - 1a Emotion in relation to feelings of pleasure and pain
  - 1b Bodily changes during emotional excitement
  - 1c Intinctive emotional reactions in animals and men
2. The classification and enumeration of the emotions
  - 2a Definitions of particular passions
  - 2b The order and connection of the passions
  - 2c The opposition of particular emotions to one another
3. The disorder or pathology of the passions
  - 3a Madness or frenzy due to emotional excess; excessively emotional or emotionally over-determined behavior
  - 3b Rationalization or the emotional determination of thought
  - 3c Particular emotional disorders: psychoneuroses due to repression
    - (1) Hysteria
    - (2) Obsessions and compulsions
    - (3) Phobia and anxieties
    - (4) Traumas and traumatic neuroses
  - 3d. The alleviation and cure of emotional disorders
4. The moral con- ditioning of the passions
  - 4a The conflict between reason and emotion
    - (1) The force of the passions
    - (2) The strength of reason or will
  - 4b The treatment of the emotions by or for the sake of reason
    - (1) Moderation of the passions by reason: virtue, continence, a dance of sin
    - (2) Attenuation and atrophy of the passions: the liberation of reason
  - 4c The moral significance of temperamental type or emotional disposition
5. The political consideration of the passions
  - 5a The causes of political association: fear or need
  - 5b The acquisition and retention of power: love or fear
  - 5c The coercive force of law: fear of punishment
  - 5d. The devices of orators: emotional persuasion
  - 5e The regulation of art for the sake of training the passions

carry out its rule. The moral virtues require more than a momentary control or moderation of the passions; they require a discipline of them which has become habitual. What Aristotle calls continence as opposed to virtue consists in reason's effort to check emotions which are still unruly because they have not yet become habituated to reason's rule.

The fact of individual differences in temperament is of the utmost importance to the moralist who is willing to recognize that universal moral rules apply to individuals differently according to their temperaments. Both psychologists and moralists have classified men into temperamental types by reference to the dominance or deficiency of certain emotional predispositions in their inherited makeup. These temperamental differences also have a medical or physiological aspect insofar as certain elements in human physique—the four bodily humors of the ancients or the hormones of modern endocrinology—seem to be correlated with types of personality.

ONE OF THE GREAT ISSUES in political theory concerns the role of the passions in human association. Have men banded together to form states because they feared the insecurity and the hazards of natural anarchy and universal war or because they sought the benefits which only political life could provide? In the political community once it is formed do love and friendship or distrust and fear determine the relation of fellow citizens or of rulers and ruled? Should the prince or any other man who wishes to get and hold political power try to inspire love or to instill fear in those whom he seeks to dominate? Or are each of these emotions useful for different political purposes and in the handling of different kinds of men?

Considering whether for the success of the prince it is better to be loved than feared or feared than loved, Machiavelli says that one should wish to be both but because it is difficult to unite them in one person it is much safer to be feared than loved when of the two either must be dispensed with. Nevertheless he continues, a prince ought to inspire fear in such a way that if he does not win love he avoids hatred because he can endure very well being feared whilst he is not hated.

According to Hobbes when men enter into a

commonwealth so that they can live peacefully with one another they are moved partly by reason and partly by their passions. The passions that incline men to peace he writes are fear of death desire of such things as are necessary to commodious living and a hope by their industry to obtain them. But once a commonwealth is formed the one passion which seems to be the mainspring of all political activity is a perpetual and restless desire of power after power that ceaseth only in death for a man cannot assure the power and means to live well which he has present without the acquisition of more.

Not all political thinkers agree with the answers which Machiavelli and Hobbes give on such matters nor do all make such questions the pivots of their political theory. But there is general agreement that the passions are a force to be reckoned with in the government of men that the ruler whether he is despotic prince or constitutional officeholder must move men through their emotions as well as by appeals to reason.

The two political instruments through which an influence over the emotions is exercised are oratory (now sometimes called propaganda) and law. Both may work persuasively. Laws like other discourses according to Plato may have preludes or preambles intended by the legislator to create good will in the persons whom he addresses in order that by reason of this good will they will more intelligently receive his command. But the law also carries with it the threat of coercive force. The threat of punishment for disobedience addresses itself entirely to fear whereas the devices of the orator—or even of the legislator in his preamble—are not so restricted. The orator can play upon the whole scale of the emotions to obtain the actions or decisions at which he aims.

Finally there is the problem of whether the statesman should exercise political control over other influences which affect the emotional life of a people especially the arts and public spectacles. The earliest and perhaps the classic statement of this problem is to be found in Plato's *Republic* and in his *Laws*. Considerations relevant to the question he raises and the implications of diverse solutions of the problem are discussed in the chapters on ART LIBERTY and POETRY.

## REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II [265 283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 1.

**PAGE SECTIONS** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS** One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e.g. *Iliad* BK II [265 283] 12d

**BIBLE REFERENCES** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT *Achimoth* 7:45—(D) II *Edras* 7:46

**SYMBOLS** The abbreviation esp calls the reader's attention to one or more especially relevant parts of a whole reference. *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Preface.

## Chapter 23 ETERNITY

### INTRODUCTION

THE notion of eternity like that of infinity has two meanings. One meaning may refer to something positive yet both seem to be formulated by the human mind in a negative way. We grasp one meaning of eternity by saying that there is no beginning or end to time's process. The other sense of eternity we conceive by denying time itself and with it change or mutability.

Considering eternity as infinite duration Locke says that we form this notion by the same means and from the same original that we come to have the idea of time — i.e., having got the idea of succession and duration — we can in our thoughts add such lengths of duration to one another as often as we please and apply them so added to durations past or to come. And thus we can continue to do, without bounds or limits, and proceed *in infinitum*.

The unimaginability of the infinite is no different in the sphere of time than in that of space or number. The difficulty Locke points out is the same in all three cases. "The idea of *so much* is positive and clear. The idea of *greater* is also clear. But these do not yet give us the idea of the infinite. That only comes with the idea of *so much greater as cannot be comprehended* and this is plainly negative not positive. What lies beyond our positive idea towards infinity? Locke continues, "lies in obscurity and has the indeterminate confusion of a negative idea wherein I know I neither do nor can comprehend all I could if being too large for a finite and narrow capacity."

In insisting that we can have no positive idea of infinity — whether of space, time or number — Locke's point seems to be that it is beyond our finite capacity to form an image of an infinite object. But thou knowest thy imagination may be limited in this way we do seem able to construct — in a negative manner — conceptions

that go beyond experience and have some meaning even if they lack imaginative content. Locke indicates this other aspect of the matter when he criticizes those who assert dogmatically that the world is neither eternal nor infinite. It seems to him that the world's eternity or the world's infinity is at least as conceivable as the contrary.

It may not be inconsistent therefore to say that infinite time while unimaginable remains quite conceivable for to say that eternity is conceivable is simply to say that endless time is neither more nor less possible than time with a beginning and an end. The first conception is as meaningful as the second. It is in fact formed from the second by iteration — by substituting the word "without" for "with" with respect to a beginning and an end. But unlike our conceptions, our images cannot be formed by iteration. When we imagine — when we perceive the object before us is positive and definite. We cannot imagine as we cannot experience a duration or a span of time without a beginning and an end.

With regard to the other traditional meaning of eternity, Locke takes a different position. It too might be defended as a negative conception so far as human comprehension is concerned since it involves the denial of time itself, i.e., of a duration comprising a succession of moments. But here Locke says that there is "nothing more inconceivable to me than duration without succession." If our weak apprehensions, he continues, cannot separate succession from any duration whatsoever our idea of eternity can be nothing but of an infinite succession of moments of duration wherein anything does exist.

Nevertheless, Locke affirms that we can easily conceive in God infinite duration and

# Chapter 23 ETERNITY

## INTRODUCTION

THE notion of eternity like that of infinity has two meanings. One meaning may refer to something positive yet both seem to be formulated by the human mind in a negative way. We grasp one meaning of eternity by saying that there is no beginning or end to time's process. The other sense of eternity we conceive by denying time itself and with it change or mutability.

Considering eternity as infinite duration Locke says that we form this notion by the same means and from the same original that we come to have the idea of time — i.e. having got the idea of succession and duration — we can in our thoughts add such lengths of duration to one another as often as we please and apply them so added to durations past or to come. And thus we can continue to do with our bounds or limits and proceed *in infinitum*.

The unimaginability of the infinite is no different in the sphere of time than in that of space or number. The difficulty Locke points out is the same in all three cases. 'The idea of so much is positive and clear. The idea of greater is also clear. But these do not yet give us the idea of the infinite. That only comes with the idea of so much greater as can or be comprehended' and this is plainly negative not positive. What lies beyond our positive ideas *as regards* infinity, Locke continues, lies in obscurity and has the indeterminate confusion of a negative idea. *Hincin* I know I neither do nor can comprehend all I would it being too large for a finite and narrow capacity.

I might say that we can have no positive idea of infinity — whether of space, time or number — Locke point seems to be that it is beyond our finite capacity to form an image of an infinite object. But though our imaginations may be limited in this way we do seem able to construct — in a negative manner — conceptions

that go beyond experience and have some meaning even if they lack imaginative content. Locke indicates this other aspect of the matter when he criticizes those who assert dogmatically that the world is neither eternal nor infinite. It seems to him that the world's eternity or the world's infinity is at least as conceivable as the contrary.

It may not be inconsistent therefore to say that infinite time while unimaginable remains quite conceivable for to say that eternity is conceivable is simply to say that endless time is neither more nor less possible than time with a beginning and an end. The first conception is as meaningful as the second. It is in fact formed from the second by negation — by substituting the word *without* for *with* with respect to a beginning and an end. But unlike our conceptions our images cannot be formed by negation. When we imagine as when we perceive the object before us is positive and definite. We cannot imagine as we cannot experience a duration or a span of time with out a beginning and an end.

WITH REGARD to the other traditional meaning of eternity, Locke takes a different position. It too might be defended as a negative conception so far as human comprehension is concerned since it involves the denial of time itself — i.e. of a duration comprising a succession of moments. But here Locke says that there is nothing more inconceivable to me than duration without succession. If our weak apprehensions he continues cannot separate successions from any duration whatsoever our idea of eternity can be nothing but of an infinite succession of moments of duration wherein anything does exist.

Nevertheless Locke affirms that we can easily conceive in God infinite duration and

we cannot avoid doing so. Whether he means by this that God's eternity involves temporal succession must be determined by an interpretation of the passage in which he maintains that God's infinite duration being accompanied with infinite knowledge and infinite power he sees all things past and to come and they are no more distant from his knowledge no farther removed from his sight than the present they all lie under the same view.

If this passage means that time stands still for God in a single moment in which all things are co-present then Locke may not be as resolute as Hobbes in rejecting the theologian's conception of God's eternity. Criticizing the Scholastics Hobbes says that for the meaning of Eternity they will not have it be an endless succession of time. Instead they will teach us that eternity is the standing still of the present time a *Nunc-stans* (as the Schools call it). This Hobbes thinks neither they nor anyone else understands no more than they would a *Huc-stans* for an infinite greatness of place.

A theologian like Aquinas tries to avoid the difficulty which Hobbes finds in this conception by distinguishing between the *nou* of eternity and the *nou* of time. The *nou* of time is the same he writes as regards its subject in the whole course of time but it differs in aspect. Furthermore the flow of the *nou* as altering in aspect is time. But eternity remains the same according to both subject and aspect and hence eternity is not the same as the *nou* of time.

The notion of the eternal as the timeless and the immutable does not belong exclusively to Christian theology. In the tradition of the great books it is found for example in Plato and Plotinus. Eternity according to Plotinus is a Life changelessly motionless and ever holding the Universal content in actual presence not this now and now that other but always all not existing now in one mode and now in another but a consummation without part or interval. All its content is in immediate concentration as at one point nothing in it ever knows development all remains identical within itself knowing nothing of change for ever in a Now since nothing of it has passed away or will come into being but what it is now that it is ever.

Eternity so conceived is perhaps even more unimaginable than the eternity which is in finite time. We may feel that we have some sense of an infinite duration when we talk as Ivan does in the *Brothers Karamazov* about a billion years or a quadrillion of a quadrillion raised to the quadrillionth power. Infinite time is like that only longer. But because all our experience is temporal through and through it is more difficult to get any sense of that which is both absolutely timeless and endlessly enduring.

Poets and sometimes philosophers turned poets have struggled to give this concept imaginative content by contrasting the white radiance of eternity with a many colored glass or by speaking of time itself as the moving image of eternity. When Dostoevsky in *War and Peace* tells Natasha that it is hard for us to imagine eternity she replies that it does not seem hard to her—that eternity is now today and it will be tomorrow and always and was there yesterday and the day before.

These and similar attempts may not succeed as much as the insight that if we could hold the present moment still or fix the fleeting instant we could draw an experience of the eternal from the heart of time. The *nou* that stands still Aquinas writes is said to make eternity according to our apprehension. For just as the apprehension of time is caused in us by the fact that we apprehend the flow of the *nou* so the apprehension of eternity is caused in us by our apprehending the *nou* standing still.

To UNDERSTAND the opposed views that constitute the major issues with regard to eternity it is necessary to hold quite separate the two meanings of the word which have run side by side in the tradition of western thought. The first of these two senses signifying interminable time is the meaning of eternity which has greatest currency in popular speech. This is the meaning which appears in the chapters of INFINITY and TIME. It is also the sense in which philosophers and theologians debate the problem of the eternity of the world—whether the world ever began or will ever end.

Since that which exists interminably is imperishable the word eternal is also applied to substances which are thought to be ever

lasting. Thus Ptolemy and the ancients generally think of the heavenly bodies as beings which are sensible and both moving and moved but eternal and impassible. Aristotle calls the heavenly bodies eternal and incorruptible. For Lucretius and the atomists the atoms and the atoms alone are eternal. They are he says everlasting though all things else are dissolved. Unless they were eternal all things before this would have utterly returned to nothing. If the atomic particles were to wear away or break in pieces Newton argues the nature of things depending on them would be changed. And therefore that nature may be lasting the changes of corporeal things are to be placed only in the various separations and new associations and motions of these permanent particles.

The heavenly bodies and the atom may be thought everlasting but they are not immutable in all respects for local motion is of their very essence. Impenetrable in existence they are also endlessly in motion. In Aristotle's view local motion can be perpetual or eternal only if it is circular. Circular motion alone has neither beginning nor end.

The eternal circular motion of the heavens, according to Aristotle in turn communicates an eternal cyclical movement to the rest of reality. Since the sun revolves thus, the seasons in consequence come-to-be in a cycle and since they come to-be cyclically so in their turn do the things whose coming-to-be the seasons indicate. Such an eternal return it would seem, is also applied by Aristotle to human things for he writes that probably each a man and each scene has often been developed as far as possible and has again perished.

SINCE THE HEAVENS and the atoms are in motion even though the motion is everlasting or eternal, they cannot be eternal in the second meaning of eternity which is the very opposite of the first not a duration or extension of it. In this meaning the eternal is an existence absolutely immutable—a being which neither comes to be nor passes away nor changes nor moves in any respect whatsoever. Aquinas uses the word in this sense when he says that the nature of eternity consists in the uniformity of what is absolutely outside of movement.

He also includes in this meaning of eternity the notion of interminability for he writes as whatever is wholly immutable can have no succession so it has no beginning and no end. Yet Aquinas preserves the sharp distinction between the two meanings when he differentiates the sense in which the world might be called eternal and the sense in which he would attribute eternity to God alone.

Even supposing that the world always was it would not be equal to God in eternity he writes for the divine being is all being simultaneously without succession but with the world it is otherwise.

The conception of eternity as absolutely immutable existence is found in the ancient pagan writers. Plotinus as we have already seen makes immutability the mark of eternity. The unmoved prime mover of Aristotle and the Platonic Ideas or Forms also possess this characteristic. But it is the Jewish and Christian theologians who make eternity in this sense one of the prime attributes of God.

Augustine for example invokes God as that everfixed Eternity in whom nothing passeth but the whole is present. Since time is for him inconceivable apart from change or motion that which exists immutably does not exist in time. Referring to God's eternity he says Compare it with the times which are neither fixed and see that it cannot be compared. Thy years neither come nor go whereas ours both come and go that they all may come. Thy years are one day and Thy day is not daily but To-day. Thy To-day is Eternity.

Time and eternity are here conceived as two distinct orders of reality. The temporal order is the order of things in change or motion the eternal the realm of the fixed or permanent the immobile and immutable. As eternity is the proper measure of being Aquinas writes so time is the proper measure of movement.

The eternal and the temporal are similarly distinguished by *Illa in* terms of the realms of being and becoming—the world of immutable being and the world of generation. In the one we find the parts of time and the past and the future which do not apply to the other. We unconsciously but wrongly transfer them. Plato declares to the eternal essence

but the truth is that is alone is properly attributed to it and was and will be are only to be spoken of becoming in time for they are motions but that which is immovably the same cannot become older or younger by time nor is it subject at all to any of those states which affect moving and sensible things of which generation is the cause

For Spinoza the distinction consists in two ways of viewing the order of nature. Things are conceived by us as actual in two ways he writes either in so far as we conceive them to exist with relation to a fixed time and place or in so far as we conceive them to be contained in God and to follow from the necessity of the divine nature. Only in the second way do we conceive things under the form of eternity. We can view things under the aspect of eternity only insofar as we know God and through knowing God are able to know all things according as their ideas involve the eternal and infinite essence of God.

The separation of time and eternity into distinct spheres of reality or even into distinct ways of conceiving the whole of being is challenged by thinkers who find the eternal within the process of time. For both Jew and Christian the eternal God intervenes directly in the temporal order. The most radical form which this fusion takes is perhaps exemplified in the doctrine of the Incarnation of Christ when the Word was made flesh and dwelt among us.

Whitehead challenges the sharpness of the separation from another point of view. He not only makes eternal objects ingredients in actual occasions or temporal events but since the events which constitute the process of change are themselves unchangeable they are for him eternal—even though they have their being within the sphere of change.

A similar point seems to be made in Aristotle's theory of change. When change is conceived as consisting in a transformation of matter it is the thing composed of matter and form which changes and neither the matter nor the form Matter as matter Aristotle writes does not cease to be in its own nature but is necessarily outside the sphere of becoming and ceasing to be. The remark would seem to hold true as well of the form as form.

As indicated in the chapter on Change the Aristotelian analysis of motion finds in matter or the substratum of change and in the contrary forms from which and to which a motion takes place the elements of permanence underlying change. When a green leaf turns red for instance green has not changed into red the leaf has changed from one color to another. The changing leaf is not eternal but red and green are since they are incapable of change. This is the sense of eternity in which the unchanging instant is eternal or the past is eternal even though both are somehow elements or aspects of time and the process of change.

The past may be eternal but it no longer exists. The passing moment may be eternal but it has no duration. Lack of existence and lack of duration together distinguish that meaning of eternal in which it merely signifies the unchanging from the meaning in which it signifies that which exists or endures forever without changing. It is only in the second of these two meanings that the eternal can be conceived as that which exists entirely outside the realm of time.

AS WE HAVE ALREADY observed the basic philosophical and theological issues concerning eternity cannot be intelligibly stated unless these meanings of eternity and the eternal are kept distinct.

The traditional problem of the eternity of the world asks for example not whether the order of nature is free from change or succession but whether the changing physical universe ever had a beginning or ever will end. As indicated in the chapters on Change Time and World it is a question of the infinity of time or in another formulation a question of the interminability of change or motion.

Aristotle appears to answer these questions affirmatively especially in the last book of his *Physics* where he claims to demonstrate the impossibility of there having been a beginning to motion. Aquinas on the other hand does not think that the eternity of the world can be demonstrated and of Aristotle's arguments he says that they are not absolutely demonstrative but only relatively so—in as against the arguments of some of the ancients who asserted that the world began to be in some actually

unprovable ways." In support of the contention, he cites a remark made by an old in the *Talmud* that among dialectical problems which we cannot solve demonstratively "one is 'whether the world is eternal'."

For Kant the problem is typically dialectical. It occurs as part of the first antinomy in the Transcendental Dialectic, the thesis of which asserts that "the world has a beginning in time" and the antithesis that "the world has no beginning, but is infinite in respect both to time and space." The fact that *a priori* cogent arguments can be marshalled for both of these contradictory propositions shows, in Kant's opinion, that the reasoner on either side is not demonstrative, but only dialectical and as he says, "illusory."

The Jewish and Christian doctrine of the world's creation by God might seem to require the denial of the world's eternity. But in fact the theologians find either alternative compatible with divine creation, which they conceive as the cause of the world's being, not necessarily of its beginning. Augustine for example examines the sense in which the world is held by some to be co-eternal with God even though made or created by God. "It is as if a foot, he interprets them to say, had been always from eternity in the dust there would always have been a print underneath it and yet no one would doubt that this print was made by the pressure of the foot nor that, though the one was made by the other neither was prior to the other." So, it goes on, it might also be said that the world has always existed and yet is always throughout eternity created, *i.e.* caused to exist by God.

Commenting on this passage Aquinas adds the observation that if an action is instantaneous and not successive it is not necessary for the maker to be prior in duration to the thing made. Hence it does not follow necessarily he writes, that if God is the active cause of the world He must be prior to the world in time because creation, by which He produced the world, is not a successive change—but an instantaneous act.

Writing both as a philosopher and as a theologian, Maimonides—many centuries before he stated his agnosticism—that he is able to show that the question is infinite in time and

endless motion cannot be decided by proof, neither in the affirmative nor in the negative. Just as for Augustine and Aquinas, so for him it is indifferent—from a philosophical point of view—whether the created world and its Creator are co-eternal or whether as Genesis says, "in the beginning God created heaven and earth."

But both alternatives are not equally acceptable to the theologian. Since there is no proof on either side "sufficient to convince us," Maimonides writes, "we take the text of the Bible literally and say that it teaches us a truth which we cannot prove"—namely that the world had a beginning in time. Aquinas comes to the same conclusion. That the world did not always exist he writes, we hold by faith alone. It is not "an object of demonstration or science." For Christian and Jew alike the religious dogma that the world is not only created by God in the sense of depending for its existence upon God as cause but was also instituted by God or caused to begin to exist and move is based on the revealed word of God in Holy Writ.

Those who, on philosophical grounds, deny creation ex nihilo also deny the world's beginning. Pursuant to his theory of the world as a necessary and perpetual emanation from the One, Plotinus, for example, declares that the Kosmos has had no beginning—and this is warrant for its continued existence. Why should there be in the future a change that has not yet occurred? For Spinoza likewise "all things which follow from the absolute nature of any attribute of God must for ever exist and to this extent at least the world is eternal and uncreated."

The man of faith, however believes in a God who is free to create or not to create, not one from whom the world emanates as a necessary effect from its source. When, therefore he affirms that God freely chose to produce the world out of nothing he seems to meet the question, "What was God doing before He made heaven and earth?" To the questioner Augustine does not wish to give the jesting answer—said to have been given by one who sought to evade the force of the question—"He was getting His ready for people who pry too deep."

Instead he points out that the question itself

is illicit for it assumes a time before time began. If before heaven and earth were made he writes there was no time then what is meant by the question What were You doing then? If there was not any time there was not any then' In the phrase before creation the word before has no temporal significance It signifies a different kind of priority—the sense in which eternity precedes time the sense in which Augustine says of God that it is not in time that You are before all time You are before all the past by the eminence of Your ever present eternity

TURNING FROM ETERNITY in the sense of infinite time to the eternal in the sense of the timeless and unchanging the great question is whether anything eternal exists The atoms of Lucretius are not eternal in this sense nor are the supposedly imperishable heavenly bodies Nor is it sufficient to point out that change itself involves aspects or elements of permanence for the question strictly interpreted asks whether anything exists in and of itself which having no beginning or end also has no past present or future—no temporal phases in its continued endurance Only such a thing would be utterly non temporal or changeless

Since nothing made of matter is exempt from motion it is generally supposed that no material thing is eternal in this sense Not even God is eternal unless God is absolutely immutable as well as spiritual The angels are spiritual beings yet according to Christian theology they cannot be called eternal because in the first place they are creatures and had an origin and in the second place they are subject to spiritual change even if they are not involved in the sorts of motion to which bodies are susceptible The theologians therefore use the word aeternal to signify the mode of angelic existence in that it is a mean between eternity and time Aeternity Aquinas explains has a beginning but no end while eternity has neither beginning nor end and time both beginning and end

THE QUESTION ABOUT the eternal as timeless and immutable existence has two parts Does an immutable God exist? Does anything else exist which is immutable?

To the first question it does not suffice to reply by affirming the existence of God Some modern theologians deny God's absolute immutability and so deny the eternity of His being in the precise sense under consideration

With regard to the second question we must observe that in the tradition of the great books eternity has been claimed for two things other than God namely for truth and ideas What ever is produced by reasoning aright Hobbes says is general eternal and immutable truth On somewhat different grounds James declares there is no denying the fact that the mind is filled with necessary and eternal relations which it finds between certain of its ideal conceptions and which form a determinate system independent of the order of frequency in which experience may have associated the conception's originals in time and space He quotes Locke to the effect that truths belonging to the essences of things are eternal and are to be found out only by the contemplation of those essences

The common phrase—the eternal verities—which James uses testifies to the prevalence of the notion that truth itself cannot change and that when men speak of a new truth or the growth of truth the change they refer to is only a change of mind with respect to what men think is true or false not a change in the truth itself Whatever is true now always was true and always will be Time and change make no difference to the truth of *two plus two equals four*

But even so it can still be asked how the truth exists for the attribution of eternity to anything also requires us to consider its mode of being If for example the truth exists only in the mind then it exists unchangingly only in the mind of an absolutely infallible knower a mind which neither learns nor forgets nor changes in any respect with regard to what it knows If God is such a knower eternal truth can have existence in God's mind

The theologians sometimes go further and identify absolute truth as they identify absolute goodness with God Aquinas writes for example that if we speak of truth as it is in things then all things are true by one primary truth to which each one is assimilated according to its entity and thus although the es-

sences or forms of things are many yet the truth of the divine intellect is one in conformity to which all things are said to be true. On this view it would appear that there are not two eternal beings but only one.

William James finds immutability not only in the truth but also in the concepts of the human mind. Each conception he writes eternally remains what it is and never can become another. The mind may change its states and its meanings at different times may drop one conception and take up another but the dropped conception can in no intelligible sense be said to change into its successor. Thus amid the flux of opinions and of physical things the world of conceptions or things intended to be thought about stands still and immutable like Plato's Realm of Ideas.

In the case of ideas however the problem is complicated by the question whether ideas exist in and by themselves outside the mind of God or man. If according to a doctrine attributed to Plato and the Platonists the Ideas or Forms exist separately then they constitute a realm of eternal beings for their immutability is unquestionable. If from an opposite point of view the realm of unchanging ideas is identical with the divine intellect then no eternal being or beings exist apart from God.

**THE PROPOSITION** that God is the only eternal being the only uncreated and immutable existence is inextricably connected with the proposition that God is the only actually infinite being the *ens causatum* having all perfection. Eternity is the very essence of God. Spinoza writes in so far as that essence involves necessary existence. In saying this he appeals to his definition of eternity by which we are to understand existence itself so far

as concerned necessarily to follow from the *ad finitum* alone of the eternal thing. For Spinoza as well as for Aquinas the same fact which makes God eternal—namely the identity of his essence and existence—also constitutes his infinity and uniqueness. It is impossible for Spinoza argues for there to be more than one infinite substance. For the same reason there cannot be two eternal beings.

I indicated in the chapter on infinity when the word *infinite* is applied to God the

theologians give it a positive rather than a negative significance. They mean by it the actual infinity of perfect being and absolute power in sharp distinction from the potential infinity by which the mathematicians signify the lack of a limit in addition or division.

These two meanings of infinity seem to parallel the two meanings of eternity which we have dealt with throughout this chapter—one the negative sense in which it means the lack of a beginning or an end to time, the other the positive sense in which God's eternity consists in that fullness of being which can exist apart from time and change. Because our intellects are finite we may apprehend eternal being in a negative manner by calling it timeless or by conceiving it as infinite duration but Spinoza cautions us against supposing that it can be explained by duration or time even if the duration be conceived without beginning or end.

One other theological discussion raises issues which involve in a unique way the two meanings of eternity. It deals with the revealed doctrine of perdition and salvation as eternal death and eternal life. Is the eternality of Hell and Heaven equivalent to a period of endless duration or does it mean—more fundamentally—the unchanging state of souls after the Last Judgment?

According to Augustine and Aquinas the eternity of Heaven and Hell means the moral immutability of the immortal soul as well as the interminability of the beatitude it enjoys or the punishment it suffers. Only in Purgatory does a change of moral state occur but the process of purification which takes place there is always limited in period. Purgatory is therefore not eternal in either sense.

As Kant sees it however the after life must not only be interminable or of infinite duration but it must also permit a progressive moral development without end. Man is justified according to Kant in hoping for an endless duration of his existence only on the ground that the holiness which the Christian law requires

leaves the creature nothing but a progress *in ad finitum*. From still another point of view Dr Johnson questions the traditional Christian dogma that the souls of the blessed are secure in a perpetual state of rectitude—in this respect

is illicit for it assumes a time before time began. If before heaven and earth were made he writes there was no time then what is meant by the question What were You doing then? If there was not any time there was not any then. In the phrase before creation the word before has no temporal significance. It signifies a different kind of priority—the sense in which eternity precedes time the sense in which Augustine says of God that it is not in time that You are before all time. You are before all the past by the eminence of Your ever present eternity.

TURNING FROM ETERNITY in the sense of infinite time to the eternal in the sense of the timeless and unchanging the great question is whether anything eternal exists. The atoms of Lucretius are not eternal in this sense nor are the supposedly imperishable heavenly bodies. Nor is it sufficient to point out that change itself involves aspects or elements of permanence for the question strictly interpreted asks whether anything exists in and of itself which having no beginning or end also has no past present or future—no temporal phases in its continued endurance. Only such a thing would be utterly non temporal or changeless.

Since nothing made of matter is exempt from motion it is generally supposed that no material thing is eternal in this sense. Not even God is eternal unless God is absolutely immutable as well as spiritual. The angels are spiritual beings yet according to Christian theology they cannot be called eternal because in the first place they are creatures and had an origin and in the second place they are subject to spiritual change even if they are not involved in the sorts of motion to which bodies are susceptible. The theologians therefore use the word aeviternal to signify the mode of angelic existence in that it is a mean between eternity and time. Aeviternity Aquinas explains has a beginning but no end while eternity has neither beginning nor end and time both beginning and end.

THE QUESTION ABOUT the eternal as timeless and immutable existence has two parts. Does an immutable God exist? Does anything else exist which is immutable?

To the first question it does not suffice to reply by affirming the existence of God. Some modern theologians deny God's absolute immutability and so deny the eternality of His being in the precise sense under consideration.

With regard to the second question we must observe that in the tradition of the great books eternality has been claimed for two things other than God namely for truth and ideas. Whatever is produced by reasoning aught Hobbes says is general eternal and immutable truth. On somewhat different grounds James declares there is no denying the fact that the mind is filled with necessary and eternal relations which it finds between certain of its ideal conceptions and which form a determinate system independent of the order of frequency in which experience may have associated the conception's originals in time and space. He quotes Locke to the effect that truths belonging to the essences of things are eternal and are to be found out only by the contemplation of those essences.

The common phrase—"the eternal verities"—which James uses testifies to the prevalence of the notion that truth itself cannot change and that when men speak of a new truth or the growth of truth the change they refer to is only a change of mind with respect to what men think is true or false not a change in the truth itself. Whatever is true now always was true and always will be. Time and change make no difference to the truth of *two plus two equals four*.

But even so it can still be asked how the truth exists for the attribution of eternity to anything also requires us to consider its mode of being. If for example the truth exists only in the mind then it exists unchangingly only in the mind of an absolutely infallible knower a mind which neither learns nor forgets nor changes in any respect with regard to what it knows. If God is such a knower eternal truth can have existence in God's mind.

The theologians sometimes go further and identify absolute truth as they identify absolute goodness with God. Aquinas writes for example that if we speak of truth as it is in things then all things are true by one primary truth to which each one is assimilated according to its entity and thus although the es-

sences or forms of things are many yet the truth of the divine intellect is one in conformity to which all things are said to be true. On this view it would appear that there are not two eternal beings but only one.

William James finds immutability not only in the truth but also in the concepts of the human mind. Each concept once he writes, eternally remains what it is and never can become another. The mind may change its states, and its meanings at different times may drop one conception and take up another but the dropped conception can in no intelligible sense be said to change into its successor. Thus mind the flux of opinions and of physical things, the world of conceptions or things intended to be thought about stands stiff and immutable like Plato's Realm of Ideas.

In the case of ideas however the problem is complicated by the question whether ideas exist in and by themselves outside the mind of God or man. If according to a doctrine attributed to Plato and the Platonists the Ideas or Forms exist separately then they constitute a realm of eternal beings for their immutability is unquestionable. If from an opposite point of view the realm of unchanging ideas is identical with the divine intellect then no eternal being or beings exist apart from God.

**THE PROPOSITION** that God is the only eternal being—the only uncreated and immutable existence is inextricably connected with the proposition that God is the only actually infinite being, the *ens reale summum* having all perfections. Eternity is the very essence of God. Spinoza writes in so far as that essence involves necessary existence. In saying this he appeals to his definition of eternity by which we are to understand existence itself so far as it is conceived necessarily to follow from the definition alone of the eternal thing. For Spinoza as well as for Aquinas the same fact which makes God eternal—namely the identity of his essence and existence—also constitutes his infinity and uniqueness. It is impossible Spinoza argues, for there to be two infinite substances. For the same reason there cannot be two eternal beings.

And stated in the chapter on INFINITY when the word infinite is applied to God the

theologians give it a positive rather than a negative significance. They mean by it the actual infinity of perfect being and absolute power in sharp distinction from the potential infinity by which the mathematicians signify the lack of a limit in addition or division.

These two meanings of infinity seem to parallel the two meanings of eternity which we have dealt with throughout this chapter—one the negative sense in which it means the lack of a beginning or an end to time the other the positive sense in which God's eternity consists in that fullness of being which can exist apart from time and change. Because our intellects are finite we may apprehend eternal being in a negative manner by calling it timeless or by conceiving it as infinite duration but Spinoza cautions us against supposing that it can be explained by duration or time even if the duration be conceived without beginning or end.

One other theological discussion raises issues which involve in a unique way the two meanings of eternity. It deals with the revealed doctrine of perdition and salvation as eternal death and eternal life. Is the eternality of Hell and Heaven equivalent to a period of endless duration or does it mean—more fundamentally—the unchanging state of souls after the Last Judgment?

According to Augustine and Aquinas the eternity of Heaven and Hell means the moral immutability of the immortal soul as well as the interminability of the beatitude it enjoys or the punishment it suffers. Only in Purgatory does a change of moral state occur but the process of purification which takes place there is always limited in period. Purgatory is therefore not eternal in either sense.

As Kant sees it however the after life must not only be interminable or of infinite duration but it must also permit a progressive moral development without end. Man is justified according to Kant in hoping for an endless duration of his existence only on the ground that the holiness which the Christian law requires leaves the creature nothing but a progress *in infinitum*. From still another point of view Dr Johnson questions the traditional Christian dogma that the souls of the blessed are secure in a perpetual state of rectitude—in this respect

like the good angels who are confirmed in their goodness from the first instant of creation

Boswell had ventured to ask him whether, although the words of some texts of Scripture seemed strong in support of the dreadful doctrine of an eternity of punishment we might not hope that the denunciation was figurative and would not be literally executed To this Dr Johnson replied Sir you are to consider the intention of punishment in a future state We have no reason to be sure that we shall then be no longer able to offend against God We do not know that even the angels are quite in a state of security It may therefore perhaps be necessary in order to preserve both men and angels in a state of rectitude that they should have continually before them the punishment of those who have deviated from it

On Dr Johnson's theory the moral condition of the damned seems to be immutable It is irremediable even by the punishments which according to him may exercise some deterrent effect upon the blessed who he seems to think are not as unalterably set in the path of righteousness as the wicked are in their iniquity

On any of these conceptions of Heaven and Hell and of the state of the soul in the after life the meaning of eternity is somewhat altered for eternal life or eternal death is conceived as having a beginning if not an end for the individual soul As in the case of all fundamental religious dogmas the truth asserted remains obscure and mysterious It is not only beyond imagination but also beyond any adequate rational conception analysis or demonstration

## OUTLINE OF TOPICS

TOPIC	P. C.
1 Eternity as timelessness and immutability or as endless and infinite time the distinction between eternity and time	443
1a The priority of eternity to time	445
1b Aeviternity as intermediate between eternity and time	
2 The issue concerning the infinity of time and the eternity of the world or of motion	
3 The eternity of God	447
4 The things which partake of eternity	
4a The imperishability of angels spiritual substances souls	
4b The imperishable in the physical order matter atoms celestial bodies	448
4c The immutability of truth and ideas	
4d The eternity of Heaven and Hell everlasting life and death	449
5 The knowledge and imagery of eternity	

## REFERENCES

To find the passage cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in *4 Hours Read* [v. 11 (265-283) 12d], the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

**Page Sections.** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in *PLATO: Psych Log* 116a-119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the page; the letters c and d to the upper and lower halves of the right-hand side of the page. For example in *PLATO: Sympos* m 163b-164c the passage begins in the lower half of the left-hand side of page 163 and ends in the upper half of the right-hand side of page 164.

AUTHORS & DIVISIONS One or more of the main divisions of a work (such as PARTS & CHAPTERS) are sometimes included in the reference. Line numbers, in brackets, are given in certain cases, e.g. *Iliad* BK II [263, 283] 12d.

BIBLE REFERENCES: The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows, e.g. Old Testament Nehemiah 7:15-(D) II Esdras 7:46

**SUMMARY** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference passim signifies that the topic is discussed intermittently rather than continuously in the book or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style for guidance in the use of The Great Ideas, consult the Preface.

# Chapter 24. EVOLUTION

## INTRODUCTION

THIS chapter belongs to Darwin. Not that his writings which are cited under almost all headings, stand alone in the various places they appear. The point is rather that many of the topics are dictated by and draw their meaning from his thought and that he figures in all the major issues connected with the origin of species, the theory of evolution and the place of man in the order of nature. With respect to the matter under consideration in this chapter, the other writers in the tradition of the great books cannot escape from being classified as coming before or after Darwin, or as being with or against him.

Darwin's influence on later writers may be variously estimated but it is plainly marked by the use of his language and their reference to his fundamental notions. James' *Principles of Psychology*, especially in its chapters on instinct and emotion, views the behavior of men and animals and the phenomena of intelligence or mind in evolutionary terms. The writings of Freud are similarly dominated by the genetic approach and by an appeal to man's animal ancestry in order to explain the inherited constitution of his psyche in conformity with the doctrine of evolution.

Out of psychology the concept of evolution is reflected in theories of progress or of a dialectical development just as, for example, in the dialectical or historical materialism of Marx and Engels which is set forth in the latter *dialectic of Nature*. An even more general re-orientation of philosophy which stems from an evolutionary way of thinking is to be found in the writings of Bergson and Deleuze such as *Creative Evolution* and *The Difference of Darwinian Philosophy*. These along with many of the specifically biological works cited in the list of Additional Readings give some measure of the influence of Darwin not

only on philosophical thought but also on the direction of research in all the biological sciences.

With regard to Darwin's predecessors the question is not so much one of their influence upon him as of their anticipation in one way or another of his discoveries, his conceptions, and his theory.

The observation made in antiquity concerning a hill-side deposit of marine fossils is sometimes taken as implying an early recognition of the evolution of terrestrial life. More apposite perhaps is the statement by Lucretius that "the new earth first put forth grass and bushes, and next gave birth to the races of mortal creatures springing up many in number in many ways after diverse fashions." Lucretius also speaks of strange monsters which nature did not permit to survive. Nature set a ban on their increase and they could not reach the coveted flower of age nor find food nor be united in marriage. And many races of living things must then have died out and been unable to beget and continue their breed. Those which survived, he adds, had qualities which "protected and preserved each particular race."

Apparently susceptible to similar interpretation are Aristotle's statements that nature proceeds little by little from things lifeless to animal life that there is observed in plants a continuous scale of ascent toward the animal and that throughout the entire animal scale there is a graduated differentiation in amount of vitality and in capacity for motion. Augustine's commentary on the first chapter of Genesis seems even more explicitly to contemplate the successive appearance of the various forms of life. Plants and animals did not actually exist when the world began. Though their causes were created by God and existed from the beginning the actual production of plants

cerned. He is concerned with establishing the fact that new species do originate in the course of time against those who suppose the species of living things to be fixed in number and immutable in type throughout the ages. He is concerned with describing the circumstances under which new species arise and other forms cease to have the status of species or become extinct. He is concerned with formulating the various factors in the differentiation of species, and with showing against those who think a new species requires a special act of creation that the origin of species, like their extinction, is entirely a natural process which requires no factors other than those at work every day in the life, death, and breeding of plants and animals. Only as a consequence of these primary considerations does he enlarge in speculations about the moving panorama of life on earth from its beginnings to its present and its future.

Darwin looks upon the term species as arbitrarily given, and for that reason does not attempt any strict definition of it. He uses it moreover like his predecessors in systematic biological classification to signify a set of individuals closely resembling each other—a class of plants or animals having certain common characteristics. Darwin would probably agree with Locke's criticism of those who suppose that our definitions of species grasp the real essences or relate to the substantial forms inherent in things. As indicated in the chapter on Definition, Locke insists that our notion of a species expresses only what he calls the nominal essence—a set of characteristics we attach to the name we give things of a sort when we group them and separate them in our classifications. The boundaries of species, whereby man sorts [things] are made by men, writes the essences of the species, distinguished by different names are of man's making.

Species is not the only term of classification. A genus, for example, is a more inclusive group than a species. Groups which differ specifically belong to the same genus if their difference is accompanied by the possession of common traits. If species differ from one another within a generic group so genera are in turn subclasses of more inclusive groupings, such as

phyla, families, and orders. But there are also smaller groupings within a species. There are races or varieties and sub-varieties, the members of which share the characteristics of the species but differ from one another in other respects. Ultimately, of course, within the smallest class the systematist bothers to define each individual differs from every other in the same group with whom at the same time it shares certain characteristics of the race, the species, the genus and all the larger classes to which they belong.

This general plan of botanical or zoological classification does not seem to give species peculiar status in the hierarchy of classes or groupings or to distinguish it from other classes except as these are more or less inclusive than itself. Why then should attention be focused on the origin of species rather than of varieties or of genera?

One part of the answer comes from the facts of generation or reproduction. Offspring tend to differ from their parents as well as from each other but they also tend to resemble one another. "A given germ," Aristotle writes, "does not give rise to any chance living being nor spring from any chance one but each germ springs from a definite parent and gives rise to a definite progeny." This is an early formulation of the insight that in the process of reproduction the law of like generating like always holds for those characteristics which identify the species of ancestors and progeny.

In other words, a species always breeds true; its members always generate organisms which can be classified as belonging to the same species however much they vary among themselves as individuals within the group. Furthermore the sub-groups—the races or varieties—of a species are able to breed with one another but diverse species cannot interbreed. Organisms different in species either cannot mate productively at all or if crossbred like the horse and the ass, they produce a sterile hybrid like the mule.

In the hierarchy of classes, then, species would seem to be distinguished from all smaller groupings by their stability from generation to generation. If species are thus self perpetuating they in turn give stability to all the larger

and animals in their various kinds is as Aquinas tells us while summarizing Augustine's view the work of propagation—not of creation

Like Aristotle both Aquinas and Locke represent the world of living organisms as a graduated scale ascending from less to more perfect forms of life. But where Aquinas tends to conceive that graduated scale as a hierarchy involving essential differences, Locke sees an almost perfect continuity involving only differences in degree. In all the visible world he writes we see no chasms or gaps. To illustrate this he points out that there are fishes that have wings and are not strangers to the airy region and there are some birds that are inhabitants of the water whose blood is cold as fishes. There are animals so near of kin to both birds and beasts that they are in the middle between both amphibious animals link the terrestrial and aquatic together and the animal and vegetable kingdoms are so nearly joined that if you will take the lowest of one and the highest of the other there will scarce be perceived any great difference between them and so on till we come to the lowest and the most inorganical parts of matter we shall find everywhere that the several species are linked together and differ but in almost insensible degrees.

But for the theory of evolution the observation of a hierarchy in nature or even of a continuity in which the species differ by almost insensible degrees constitutes only background. What the theory of evolution brings to the fore is the notion of a developmental or genetic relation among the various forms of life. Because it seems to contain this insight the anticipation of Darwin to be found in Kant's *Critique of Judgement* is perhaps the most remarkable even though in a closely related passage in which Kant discusses epigenesis he uses the word evolution in a sense quite contrary to Darwin's conception.

It is praiseworthy Kant writes to employ a comparative anatomy and go through the vast creation of organized beings in order to see if there is not discoverable in it some trace of a system and indeed of a system following a genetic principle. When we consider the agreement of so many genera of animal in a certain common schema which apparently underlies not only the structure of their bones

but also the disposition of their remaining part and when we find here the wonderful simplicity of the original plan which has been able to produce such an immense variety of species by the shortening of one member and the lengthening of another by the involution of this part and the evolution of that there gleams upon the mind a ray of hope however faint that the principle of the mechanism of nature apart from which there can be no natural science at all may yet enable us to arrive at some explanation in the case of organic life. This analogy of forms which in all their differences seem to be produced in accordance with a common type strengthens the suspicion that they have an actual kinship due to descent from a common parent. This we might trace in the gradual approximation of one animal species to another from that in which the principle of ends seems best authenticated namely from man back to the polyp and from this back even to moles and lichens and finally to the lowest perceptible stage of nature.

FINDING ANTICIPATIONS of Darwin involves judgments much more subject to controversy than tracing his influences. It is questionable for example whether the suggestive passages in Lucretius and Locke bear more than a superficial resemblance to Darwin's thought. The matter is further complicated by Darwin's own sense of his divergence from and disagreement with his predecessors—both immediate precursors like Buffon and Linnaeus and earlier philosophers and theologians.

Darwin tells us himself of his quarrel with the theologians. His followers elaborate on the opposition between his conception of species and that of Aristotle an opposition which Darwin intimates by the great stress he lays on the difference between a static taxonomy and dynamic or genealogical classification of living things.

We must therefore try to locate the central points of Darwin's theory in order to judge comparable views for their agreement or disagreement.

As the title of his major work indicates it is not evolution as a grand scheme of biological or cosmic history but the origin of species with which Darwin seems to be principally con-

common language will come into accordance. In short we shall have to treat species in the same manner as those naturalists treat genera who admit that genera are merely artificial combinations made for convenience. Our classifications will come to be as far as they can be so made genealogies.

The origin of species thus seems to be identical with the extinction of intermediate varieties combined with the survival of one or more of the extreme varieties. These seem to be simply two ways of looking at the same thing. Still another way of seeing the point may be achieved by supposing contrary to fact the survival of all the varieties ever produced through the breeding of organisms.

If my theory be true Darwin writes numberless intermediate varieties, linking closely together all the species of the same group must assuredly have existed, but the very process of natural selection constantly tends as has been so often remarked to exterminate the parent forms and the intermediate links. If one were to suppose the simultaneous co-existence of all intermediate varieties in the present day the groups now called species would be continuously connected by slight differences among their members and would not therefore be divided into distinct species as they now are because certain links are missing.

In the *Critique of Pure Reason* Kant states the principle of continuity in the following manner. This principle he writes indicates that all differences of species must each other and do not admit of transition from one to another by a *situs* but only through smaller degrees of the difference between the one species and the other. In one word there are no species or sub-species which are the nearest possible to each other intermediate species or sub-species being always possible the difference of which from each of the former is always smaller than the difference existing between these. But Kant adds it is plain that the continuity of forms is a mere idea to which no adequate object can be discovered in experience partly because "the species in nature are really divided and if the gradual progression through their affinity were continuous the intermediate members lying be-

tween two given species must be infinite in number which is impossible."

The Russian geneticist Theodore Dobzhansky gives an interpretation of continuity in nature which differs from Kant's in that it follows and applies Darwin's conception of species and their origin. According to him if we suppose the extreme case of all possible genetic variations being alive on earth together the result would be not an infinite number of species but no species and genera at all. The array of plants and animals would approach a perfectly continuous series in which there would only be individual differences. There would be no specific or generic groupings of the sort now made in our classification of the forms of life.

On DARWIN's conception of the origin of species its causes divide in two sets of factors first those which determine the extinction or survival of organisms and with their survival their opportunities for mating and reproduction second those which determine the transmission of characteristics from one generation to another and the variation of offspring from their ancestors and from each other. Without genetic variation there would be no range of differences within a group on which the factors of selection could operate. Without the inheritance of ancestral traits there would be no perpetuation of group characteristics in the organisms which manage to survive and reproduce.

For Darwin the operation of the first set of factors constitutes the process of natural selection. This may take place in many ways through geological catastrophes which make certain areas of the earth's surface uninhabited by all organisms or for those types which cannot adapt themselves to the radically changed environment through the competition among organisms for the limited food supply available in their habitat through the struggle for existence in which organisms not only compete for food but also prey upon one another through the sexual selection which operates within a group when some organisms are prevented by others from mating and reproducing and through all the obstacles which isolate groups from interbreeding in

groupings—the genera phyla families—which remain as fixed from generation to generation as the species which constitute them. Hence the question of origin applies peculiarly to species rather than to varieties or to genera.

On the supposition stated no origin of species would seem to be possible except by a special act of creation. Either all the existing species of organisms have always existed from the beginning of life on earth or if in the course of ages new species have arisen their appearance cannot be accounted for by natural generation. By the law of natural generation offspring will always be of the same species as the parent organisms.

Spontaneous generation of course remains a possibility. A new species of organism might come to be without being generated by other living organisms. But apart from the question of fact (*i.e.* whether spontaneous generation ever does occur) such origin of a form of life seems to be outside the operation of natural causes and to imply the intervention of supernatural power.

The possibility of spontaneous generation was entertained in antiquity and the Middle Ages and was even thought to be supported by observation such as that of maggots emerging from putrefying matter. But modern science tends to affirm the biogenetic law that living organisms are generated only by living organisms. To Kant the notion that life could have sprung up from the nature of what is void of life seems not only contrary to fact but absurd or unreasonable. Yet while affirming the principle that like produces like by insisting upon the generation of something organic from something else that is also organic, Kant does not carry that principle to the point where it would make the generation of a new species impossible. Within the class of organic beings he writes it is possible for one organism to generate another differing specifically from it.

AGAINST THE BACKGROUND of these various suppositions Darwin is moved to a new insight by the conjunction of certain types of fact the results of breeding under domestication which exhibit the great range of variation within a species and the tendency of *inbred*

varieties to breed true his own observations of the geographical distribution of species of flora and fauna especially those separated from one another by impassable barriers the basis of comparative anatomy and embryology which reveal affinities in organic structure a development between organisms distinct in species and the geological record which indicates the great antiquity of life upon the earth which gives evidence of the cataclysmic changes in the earth's surface (with consequences for the survival of life) and which above all contains the fossil remains of forms of life now extinct but not dissimilar from species alive in the present age.

Briefly stated Darwin's insight is that new species arise when among the varieties of an existing species certain intermediate forms become extinct and the other circumstances are such that the surviving varieties now become more sharply separated from one another in type are able to reproduce their kind and in the course of many generations of inbreeding also tend to breed true. They thus perpetuate their type until each in turn ceases to be a species and becomes a genus when its own extreme varieties separated by the extinction of intermediates become new species as they themselves did at an earlier stage of history. For the very same reason that Darwin says a well marked variety may be called an incipient species a species may be called an incipient genus.

The point is misunderstood if it is supposed that when new species originate from old both the new and the old continue to survive as species. On the contrary when in the course of thousands of generations some of the varieties of a species achieve the status of species the species from which they originated by variation ceases to be a species and becomes a genus.

The only distinction between species and well marked varieties Darwin writes is that the latter are known or believed to be connected at the present day with intermediate gradations whereas species were formerly thus connected. It is quite possible that forms now generally acknowledged to be mere varieties may hereafter be thought worthy of specific names and in this case scientific and

## CHAPTER 24 EVOLUTION

pothesis of the origin of species by the extinction of intermediate varieties

In comparing Darwin with certain of his predecessors notably Aristotle and Aquinas it seems necessary to apply another kind of test. Here the problem is not so much one of discovering affinities or descendants as one of determining whether they are talking about the same thing and therefore when they appear to disagree whether the issue between them is genuine. They do not seem to conceive a species in the same way. Certainly they use the word differently. This affects the way in which the whole problem of origin is understood. The controversies concerning the fixity or mutability of species, concerning evolution and creation and concerning the origin of man involve genuine issues only if those who seem to disagree do not use the word species in widely different senses.

It is possible that certain forms of life do not originate by descent from a common ancestor and do not derive their status as quite distinct types from the mere absence of intermediate varieties—varieties which once must have existed but are now extinct. If such forms were to be called species the word would have a different meaning from the meaning it has when applied to types of pigeons, beetles, or rats.

The first of these two meanings may express the philosophical conception of a living species as a class of organisms having the same essential nature according to which conception there need not have been intermediate varieties. The second meaning may be that of the scientist who omits in botany or zoology who constructs a system of classification genealogical otherwise. On this meaning one million and a half would be a conservative estimate of the number of plant and animal types classified by the systematist as species. In contrast the number of species in the philosophical sense of distinct essences would be extremely small.

Darwin for example says I cannot doubt that the theory of descent with modification embraces all the members of the same great class or kingdom. I believe that animals are descended from at most only four or five progenitors, and plants from an equal or lesser

number. Analogy would lead me one step farther namely to the belief that all animals and plants are descended from some one prototype. But analogy may be a deceitful guide." It is immaterial to the theory of evolution he adds whether this inference chiefly grounded on analogy be accepted.

The issue between Darwin and the theologians may or may not be genuine according to the interpretation of this passage and according to the possibility of a double use of the word species—for both the small number of progenitors from which all the extant types of plants and animals have evolved and for a very large number of those extant types. If the theologians use the word species in the first sense and Darwin in the second they need not be in disagreement. The view of life which Darwin attributes to certain eminent authorities he himself does not flatly reject namely that life with its several powers [has] been originally breathed by the Creator into a few forms or into one.

Is there common ground here in the admitted possibility that life may have been originally created in a small number of distinct forms and that these are to be regarded as species in one conception though not in another? If so the affirmation of a certain fixity to species would apply only to a few primordial forms. Concerning forms which have appeared with the passage of time two questions would have to be answered. First are they species in the philosopher's sense of distinct and immutable essences or species in the scheme of systematic biological classification? Second is their first appearance at an historical moment due to a special act of creation to spontaneous generation or to evolution from already existing organic forms by descent with modification?

To join issue with Darwin it would seem to be necessary for the person answering these questions to use the word species in the biologist's sense and at the same time to account for the historical origin of the new species by special creation or spontaneous generation. But in the tradition of the great books, theologians like Augustine and Aquinas do not attribute to God any special acts of creation after the original production of the world.

cluding geographical and physiological in accessibility

The struggle for existence is not only a struggle to survive but also a struggle to reproduce. Natural selection operates with respect to reproduction as well as survival. Whether the survival is of the fittest alone or whether the multiplication of inferior organisms also gives evolution another direction has been disputed since Darwin's day, but according to his theory natural selection works solely by and for the good of each being all corporeal and mental endowments will tend to progress toward perfection. Thus from the war of nature from famine and death the production of the higher animals directly follows.

With respect to the factors of heredity and variation tremendous advances since Darwin in the experimental science of genetics require revisions in this part of his theory of evolution. This is particularly true of the researches of Mendel, Bateson, and Morgan concerning the ways in which genetic factors operate. But on one major point in the theory of heredity Darwin holds a view which later investigations have tended to confirm. Antedating Weismann he nevertheless opposes Lamarck's theory of the inheritance of acquired characteristics. As William James expresses it where Lamarck supposes that environmental influences cause changes in the structure or functioning of the organism which then become hereditary, Darwin regards the environment merely as a selective agency acting upon variations produced entirely by causes operating in the breeding process. James thinks the evidence for Mr. Darwin's view [was] quite convincing even before it received the support of Weismann's theory according to which it is *a priori* impossible that any peculiarity acquired during the lifetime by the parent should be transmitted to the germ.

The situation is not the same with regard to Darwin's views on the mechanism of heredity. Writing before Mendel's classic experiments in hybridization, Darwin seems to suppose a blending of hereditary factors whereas according to Mendel inheritance is particulate. Distinct genetic factors combine to produce a certain somatic result without losing their

separate identities. They can therefore be reassorted and enter into new genetic combinations in the next generation. Most important of all Darwin thinks that new forms of life are gradually as the result of a continuous accumulation of slight and imperceptible variations. The opposite view is now taken. The discovery of abrupt mutations in a single generation discredits Darwin's maxim *natura non facit saltum*—nature does nothing by jumps.

These advances in genetics since Darwin's day do not alter the main outlines of his theory. The mechanisms of heredity may be much more complicated than Darwin knew and involve much of which he was ignorant such as mutation rates or the various types, causes, and effects of hybridization. But that merely leads to a more elaborate or different explanation of genetic variation in offspring and the transmission of ancestral traits. No matter how these are explained their occurrence is all that is needed to permit new species to originate through natural processes of heredity and selection. If Darwin were alive today Julian Huxley writes the title of his book would have to be not the origin but the Ongoing Species. For perhaps the most salient single fact that has emerged from recent studies is that species may arise in a number of quite distinct ways.

THE READER MUST judge for himself to what extent Darwin's theory of evolution was anticipated by those who like Augustine affirm the appearance of new species of life on earth at various stages in its history or even by a writer like Kant who seems to possess the germ of an insight.

The critical test in every case is whether those who affirm the occurrence of new species by natural processes rather than by special creation think of them as simply added to the organic forms already in existence without any change in the status as species of the pre-existing forms. Those who think in this way do not have Darwin's idea of the origin of species so as to conceive an increase in the number of species as merely a matter of addition that necessarily attribute stability to each species new as well as old. By this test not even Kant seems to be near the center of Darwin's hy-

cord. to the doctrine of man's creation by God or even on the hypothesis of emergent evolution, there need not be—strictly speak. ir—there can be—a missing link between ape and man, for the emergent species is a whol step upward in the scale of life. Man is thus not one of several organic types which have become species throu h the extinction of intermediate varieties, and hence he differs from other animals not in an accidental but rather in an essential manner—that is, h dif s in kind rather than de gree.

This issue concerning human nature is discussed from other points of view in the chapters on ANIMAL AND MAN. Here the issue stated in terms of man's origin seems to involve three possiblities: special creation, evolution by descent from a common ancestor, and emergent evolution. But these three possibilities apply not only to man, but to the origin of every species which did not exist at the first moment of life on earth.

The hypothesis of special creation does not seem to be held by the theologists, at least not in the tradition of the great books. The hypothesis of emergent evolution raises questions concerning the factors—natural or supernatural—which must be operative to cause the emergence of higher from lower forms of organic matter. Whether or not Aristotle and Aquinas can supply an answer to these questions in terms of their theory of matter is

potential to for a variety of forms. Darwin's theory of descent with modification seems to be definitely opposed to the hypothesis of emergent evolution. Speaking as a Darwinian, James says that the point at which evolution is is we are bound to hold fast to is that all the new forms of being that make their appearance are really nothing more than results of the redistribution of the original and unchanging materials. "No new natures, no factors not present at the beginning are introduced at any later stage."

In this dispute between two theories of evolution does not the solution depend in every case upon a prior question concerning the relation of the species under consideration—whether or not it is possible for them to be or to have been developmentally connected by intermediate varieties? If for example the evidence were to prove that man and ape as they now exist in the world are essentially distinct—different in kind—then no intermediate varieties could ever have existed to account for their descent from a common ancestor. If on the other hand the evidence were to prove that they differ only in degree then no difficulty stands in the way of the Darwinian hypothesis. The ultimate issue concerns the origin of species would thus seem to reduce to the problem of which meaning of "species" applies to the organic types in question.

## OUTLINE OF TOPICS

### 1 The classification of animals

450  
461

1a Comparison of genealogical classification w th other types of taxonomy, th. ph. Lorenzen's views

1b The criteria f r distinguishing races or varieties, species, genera and all higher taxonomic groupings

### Genetic variation in the course of generations

46-

2a Comparison of variation under conditons of natural and artificial breeding

2b Characteristics which are more and less variable genetically, their bearing on the distinction of races, species, and genera

### 3 The process of heredity

3a The inheritance of acquired characteristics, the use and disuse of parts

except to explain the origin of individual human souls

Nothing entirely new was afterwards made by God Aquinas writes but all things subsequently made had in a sense been made before in the work of the six days Some existed not only in matter but also in their causes as those individual creatures that are now generated existed in the first of their kind Species also that are new if any such appear existed beforehand in various active powers so that animals and perhaps even new species of animals are produced by putrefaction by the power which the stars and elements received at the beginning Again animals of new kinds arise occasionally from the connection of individuals belonging to different species as the mule is the offspring of an ass and a mare but even these existed previously in their causes in the work of the six days

WHETHER OR NOT the theologian's conception of an historical development of the forms of life conforms to the evolutionist's hypothesis even though it does not offer the same type of explanation is a matter which the reader of the texts must decide But one issue which still remains to be discussed can leave little doubt of a basic controversy between Darwin and some of his predecessors especially the theologians

It concerns the origin and nature of man It can be stated in terms of two views of human nature One is that man is a species in the philosophical sense essentially and abruptly distinct from brute animals the other that man is a species in the biologist's sense and differs from other animals only by continuous variation

On the first view either man would have to be created in body as well as soul or if the human species has an origin which in part or whole involves the operation of natural causes it must be conceived as emerging from a lower form of life The rational soul Aquinas maintains can not come to be except by creation But it is not only man's soul which according to Aquinas cannot be produced save immediately by God He also insists that the first formation of the human body could not be by the instrumentality of any created power but was im-

mediately from God He does not reject the suggestion of Augustine that the human body may have preexisted in other creatures as a *effect preexists in its causes* But he adds the qualification that it preexists in its causes only in the manner of a passive potentiality so that it can be produced out of pre-existing matter only by God A Christian theologian like Aquinas might entertain the hypothesis of emergent evolution as applied to the human organism but only with the qualification that natural causes by themselves do not suffice for the production of man

On the second view which is Darwin's man and the anthropoid apes have descended from a common ancestral form which is now extinct as are also many of the intermediate varieties in the chain of development—unless as it is sometimes thought certain fossil remains supply some of the missing links The great break in the organic chain between man and his nearest allies which cannot be bridged over by any extinct or living species has often been advanced Darwin admits as a grave objection to the belief that man is descended from some lower form but this objection he continues will not appear of much weight to those who from general reasons believe in the general principle of evolution Breaks often occur in all parts of the series some being wide sharp and defined others less so in various degrees as between the orang and its nearest allies—between the Tarsius and the other Lemuridae—between the elephant and in a more striking manner between the Ornithorhynchus or Echidna and all other mammals Furthermore Darwin insists no one who has read Lyell's *Antiquity of Man* will lay much stress

on the absence of fossil remains for Lyell has shown that in all the vertebrate classes the discovery of fossil remains has been a very slow and fortuitous process Nor should it be forgotten that those regions which are the most likely to afford remains connecting man with some extinct ape like creature have not as yet been searched by geologists

On either of these two conflicting views the organic affinities between man and the most highly developed mammals would be equally intelligible though they would be differently interpreted by Aquinas and Darwin But at

## REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example, in 4 Horace *lIad* BK II [263 283] 12d, the number 4 is the number of the column in the set; the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 James *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page, the letters c and d to the upper and lower halves of the right hand side of the page. For example, in 7 PLATO *Symposium* 163b-164c, the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS** One or more of the main divisions of a work (such as part, book, chapter, section) are sometimes included in the reference line in numbers, in brackets, are given in certain cases, e.g. *Iliad* BK II [65 283] 12d.

**BIBLE REFERENCES** The references are to book, chapter and verse. When the King James and Douay versions differ in title, books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows, e.g. Old TESTAMENT *Achaziah* 7.45-(D) II *Esdras* 7.46.

**SYMBOLS** The abbreviation esp" calls the reader's attention to one or more especially relevant parts of a whole reference; passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

## Chapter 25 EXPERIENCE

### INTRODUCTION

EXPERIENCE is regarded as a source of knowledge. It is also spoken of as containing what is known.

Sometimes it is identified with sense perception; sometimes it involves more—memory and the activity of the imagination. Sometimes it includes thoughts, feelings, and desires as well as all the contents of consciousness. Every phase of mental or psychic life. The temporal flow of experience is then identified with the stream of consciousness.

Experience may connote something which is private or public, subjective or objective—something which no man can share with another or something which is common to all men who live in the same world and who are acquainted with the same objects.

There are still other divisions of experience: intuitive or aesthetic experience, religious experience, and mystical experience.

Experience is said to be that which makes a man expert in an art or in a sphere of practical activity. A man is better able to do or make that which he has much experience in doing or making. He is also better able to judge what should be undertaken or what has been accomplished by others as well as by himself. In this connection experience is called practical both because it is the result of practice and because it is a means to be used in directing action. But it is also praised for the opposite reason—as something to be enjoyed for its own sake, serving no end beyond itself unless it be the enrichment of life by the widest variety of experiences.

These are some of the myriad meanings of experience—not all but those which occur with major emphasis in the tradition of the great books. No author uses the word in all these senses. Some of these senses are contra-

dictory. According to the context of the discussion or the subject matter under consideration, the same author will shift from one meaning to another.

For example, in his account of the origin of science Aristotle says that out of sense-perception comes to be what we call memory, and out of frequently repeated memories of the same thing develops experience. For a number of memories constitute a single experience. The further product of experience—the universal stabilized in its entirety within the soul—is obtained by abstraction and the related act of induction or generalization. Art or science arises, Aristotle writes, when from many actions gained by experience one universal judgment about a class of objects is produced. Hence it can be said, he thinks, that from experience originate the skill of the craftsman, the knowledge of the man of science, skill in the sphere of coming to be, and science in the sphere of being.

In the study of nature experience according to Aristotle is essential for taking a comprehensive view of the admitted facts which can come only from dwelling in intimate association with nature and its phenomena. In the context of ethical or political problems he treats experience as the basis for a prudent judgment which is not concerned with universals only but must also recognize the particulars. This fact Aristotle writes explains why some who do not know but who have experience are more practical than others who know. In the field of poetry as in moral matters it is the man of experience according to Aristotle who can best judge what is good or bad, he can judge rightly the works produced, and understand by what means of how they are achieved and what harmonizes with what whereas the inexperienced must

## CHAPTER 25 EXPERIENCE

the content if they do not fail to see whether the work has been well or ill made.

Hobbes and William James also use the word or the possession of expertise or sound judgment in practical affairs as well as in connection with the origin or nature of knowledge. Hobbes like Aristotle says that much memory or memory of many things is called *Experience*. He connects it with prudence. It is that knowledge he writes which is not attained by reasoning but found as well in brute beasts as in man and is but a memory of successions of events in times past wherein the omission of a very little circumstance alters the effect frustrates the expectation of the most prudent.

For James however experience is usually identified with the stream of consciousness. Experience moulds us every hour he writes and makes of our minds a mirror of the time-and-space-connections between the things in the world. He distinguishes it from conception, reasoning or thought and associates it with sensation and feeling. The way of experience proper is the front door he writes the door of the five senses.

For the most part experience is a term in psychological analysis with implications for the development of theoretic knowledge or practical wisdom. That is the way it is chiefly used by Aquinas, Bacon, Descartes, Spinoza, Locke and Hume as well as the authors already mentioned. It is still a term in the dimension of psychology when it is used by Plotinus and by the theologians to discuss the mystical union of the soul with God.

But with Hume experience also is reality or in his phrase the realm of matters of fact and existence as opposed to relations of ideas. He tends to identify the order of nature with the succession of events in experience though he also seems to conceive a pre-established harmony between the course of nature and the succession of our ideas. Nature he goes on to say has implanted in us an instinct which carries forward the thought in a correspondent course to that which she has established among eternal objects.

Hume's difficulty or indecision with regard to the objectivity of experience does not appear in Kant for whom experience ceases to be psychological in any subjective sense if that word

The order of nature—the object of the theoretic sciences—is the order of experience. In Kant's technical sense of *mögliche Erfahrung* nature is the realm of all possible experience. His distinction between judgments of perception and judgments of experience differentiates what for other writers is subjective sense-experience from knowledge of reality or of objects shared by many minds.

Experience is the domain of such public objects precisely because its sense-materials are formed and ordered by the structure of the mind itself—by the forms of intuition and the categories of the understanding in a synthesis of apperception. Without this synthesis experience would be merely a rhapsody of perceptions never fitting together into any connected context according to rules of a thoroughly united (possible) consciousness and therefore never subjected to the transcendental and necessary unity of apperception.

Though it may not seem possible William James goes further than Kant in the conception of experience as a realm of being. Kant does not think that all possible experience circumscribes reality. That which is not phenomenon he writes cannot be an object of experience; it can never overstep the limits of sensibility within which alone objects are presented to us. In contrast to this phenomenal reality with which he identifies experience Kant posits a noumenal world—a world of intelligible or supra-sensible beings. To this realm Kant writes belong those possible things which are not objects of our senses but are cogitated by the understanding alone. Since the things Kant calls *ding-an-sich* are unconditioned that is not subject as they are in themselves to the forms of intuition or the categories of the understanding they cannot have an empirical or sensible reality but only an intelligible existence.

William James goes further in his *Essays in Radical Empiricism* when he takes experience as equivalent to the whole of reality including the actual and the possible or imaginary, the concrete and the abstract, the objective and the subjective. All differentiations must be made within experience and experience itself is neutral with respect to all distinctions—re-

ceptive of all. There can be no meaningful distinction between experience and some other realm of existence. It is in this all inclusive sense that experience is said to be the central term in the philosophy of John Dewey when it functions as *mind* does for Hegel, *substance* for Spinoza or *being* for Aquinas and Aristotle.

WE HAVE GONE from one extreme to another in passing from a purely psychological to something like a metaphysical conception of experience. These are opposite in a way which suggests the contrast between the practical and the aesthetic values of experience—the actively useful and the intrinsically enjoyable. At least the metaphysical identification of experience with all existence seems analogous to the aesthetic ideal of a life which embraces every variety of experience.

There is some intimation of this ideal in the lust for adventure which motivates Odysseus and his men. Dante in fact finds the secret of his character in the ardor of Odysseus to become experienced of the world and of the vices of men and of their virtue which leads him to pursue virtue and knowledge even to the point of his mad flight.

There is some suggestion of this ideal of experience in the unbounded vitality of Gargantua and Pantagruel and in the enterprise of the Wife of Bath in Chaucer's tale. But the great poetic expression of this ideal is written in *Faust*—in the words of experience Mephistopheles opens to the man who has wagered his soul for one ultimately satisfying moment:

Whatever to all mankind is assured  
I in my inmost being will enjoy and know  
Seize with my soul the highest and most deep  
Men's woe and woe upon my bosom heap  
And thus this self of mine to all that selves  
expanded  
Like them I too at last be stranded

THE BASIC ISSUE concerning the role of experience in the origin of knowledge especially the organized knowledge of the arts and sciences turns on whether it is the source or only a source. It is rarely if ever supposed that nothing can be learned from experience or that everything worth learning can come to be known entirely apart from experience. During the early centuries of Christianity devoutly religious men

preached that God has revealed to man all he needs to know in order to live well and be saved. But this extreme position rejects the constitutions of reason as well as the materials of experience.

Among philosophers and scientists concerned with what man can learn by the exercise of his own powers the controversy over experience usually involves a distinction between these and the reason or intellect. As indicated in the chapters on IDEA, MIND and SENSE whether this distinction can be validly made is itself a major issue in the tradition of the great books. Those who make it however tend to regard experience as something which results from the activity of the senses. For them the problem is whether our ideas—the general notions or concepts that enter into our scientific judgments and reasoning—come from sense-experience which either is or originates from the perception of particulars. The contrast between the particular and the universal between percept, sense impression or concrete image on the one hand and concept or abstract idea on the other lies at the heart of the problem.

One possibility is that the mind by processes of abstraction or induction somehow draws all its concepts and generalizations from experience. Aquinas is representative of this view. He adopts Aristotle's notion that the intellect is like a tablet on which nothing is written. This *tabula rasa* depends upon the senses and the imagination for the material out of which concepts are formed. For the intellect to understand actually Aquinas writes not only when it acquires new knowledge but also when it uses knowledge already acquired there is need for the act of the imagination and of the other powers.

Without experience the mind would remain empty but experience itself does not fill the intellect with ideas. The activity of the sensitive faculty is not by itself the cause of knowledge. The perceptions and images furnished by sense experience Aquinas writes need to be made actually intelligible and this requires the activity of the intellect not merely its passivity in receiving impressions from experience. For this reason he concludes it cannot be said that sensitive knowledge is the total and perfect cause of intellectual knowledge but

further that it is in a way the material cause—Although experience is the indispensable source of the materials on which the intellect actively works knowledge worthy of the name of science or of art does not come from experience alone.

Thus we see that those who like Aquinas think that there is nothing in the intellect which was not previously in the senses do not mean to imply that the materials of sense-experience reach the intellect untransformed. On the contrary the primary contribution of the intellect is the translation of experienced particulars into universal notions. Nor do those who like Bacon affirm that the principles of knowledge are obtained by induction from experience necessarily imply that all knowledge is directly drawn from experience. To the extent that deductive reasoning is a way of learning new truths the truths thus learned derive from experience only indirectly. Their direct source is truths already known which in turn have come from experience by induction.

Hume criticizes those who misconceive the part which reason should play in relation to the senses. In the field of his own inquiries some weak and inexperienced persons he writes vainly seek by dialectics and far-fetched arguments either to upset or establish things that are only to be founded on anatomical demonstration and believed on the evidence of the senses.

How difficult it is he continues to teach those who have no experience the things of which they have not any knowledge by their senses!

As geometry is in all the sciences according to Hume it is the business of reason to make sensible to make rational demonstration of things that are not sensible to the mind credible or certain things abstract and beyond sense from the more manifest and better known. Science depends upon both reason and sense but sense not reason is the ultimate arbiter of what can be accepted as true. To test whether anything has been well or ill advised to ascertain whether some falsehood does not lurk under a proposition it is imperative to use Hume's declaration to bring it to the proof of sense and to admit or reject it on the decision of sense.

The foregoing views are not a necessary consequence of the distinction between the faculties of sense and reason. The theory of innate ideas presents another possibility. As expressed by Descartes for example this theory holds that there are purely intellectual [ideas] which our understanding apprehends by means of a certain inborn light. Hence it would seem that experience can be dispensed with except for its value in dealing with particulars. But for most of the writers who take this view experience in addition to providing a acquaintance with particulars, acts as the stimulus or the occasion for the development of the seeds of knowledge implanted in the mind at birth. Although he rests his metaphysics on the innate ideas of self and God Descartes also appeals to experimental knowledge in the sphere of natural science. To answer such a question as "what is the nature of the magnet" the inquirer must first collect all the observations with which experience can supply him about this stone and from these he will next try to deduce its character.

The extreme position which denies any role to experience can be taken only by those who think that the growth of actual knowledge from innate ideas requires no outside impetus and perhaps also by those who make ideas the objects of the mind's intuitive apprehension. It is questionable whether anyone goes to this extreme without the qualification that for particulars at least sense-experience is knowledge.

The other extreme—that experience is the only source of knowledge—is approached by those who deny the distinction in faculties and substitute for the duality of sense and reason each with its characteristic contribution to human knowledge a distinction between the function of perceiving and that of reworking the received materials. Though in different ways Hobbes, Locke, Berkeley, and Hume all appear to take this position.

They represent according to James the empirical school in psychology. He tries to summarize their view by saying that if all the connections among ideas in the mind could be interpreted as so many combinations of sensed material into unity then experience in the common and legitimate sense of the word would be the sole fashioner of the mind. If

ceptive of all. There can be no meaningful distinction between experience and some other realm of existence. It is in this all inclusive sense that experience is said to be the central term in the philosophy of John Dewey when it functions as *mind* does for Hegel, *substance* for Spinoza or *being* for Aquinas and Aristotle.

WE HAVE GONE from one extreme to another in passing from a purely psychological to some thing like a metaphysical conception of experience. These are opposite in a way which suggests the contrast between the practical and the aesthetic values of experience—the actively useful and the intrinsically enjoyable. At least the metaphysical identification of experience with all existence seems analogous to the aesthetic ideal of a life which embraces every variety of experience.

There is some intimation of this ideal in the lust for adventure which motivates Odysseus and his men. Dante in fact finds the secret of his character in the ardor of Odysseus to be come experienced of the world and of the vices of men and of their virtue which leads him to pursue virtue and knowledge even to the point of his mad flight.

There is some suggestion of this ideal of experience in the unbounded vitality of Gargantua and Pantagruel and in the enterprise of the Wife of Bath in Chaucer's tale. But the great poetic expression of this ideal is written in *Faust*—in the worlds of experience Mephistopheles opens to the man who has wagered his soul for one ultimately satisfying moment:

Whatever to all mankind is assured  
I in my inmost being will enjoy and know  
Seize with my soul the highest and most deep  
Men's woe and woe upon my bosom heap  
And thus this self of mine to all their selves  
expanded  
Like them I too at last be stranded

THE BASIC ISSUE concerning the role of experience in the origin of knowledge especially the organized knowledge of the arts and sciences turns on whether it is the source or only a source. It is rarely if ever supposed that nothing can be learned from experience or that everything worth learning can come to be known entirely apart from experience. During the early centuries of Christianity devoutly religious men

preached that God has revealed to man all he needs to know in order to live well and be saved. But this extreme position rejects the contributions of reason as well as the materials of experience.

Among philosophers and scientists concerned with what man can learn by the exercise of his own powers the controversy over experience usually involves a distinction between the senses and the reason or intellect. As indicated in the chapters on IDEA, MIND and SENSE whether this distinction can be validly made is itself a major issue in the tradition of the great books. Those who make it however tend to read experience as something which results from the activity of the senses. For them the problem whether our ideas—the general notions or concepts that enter into our scientific judgments and reasoning—come from sense-experience which either is or originates from the perception of particulars. The contrast between the particular and the universal between the sense impression or concrete image on the one hand and concept or abstract idea on the other lies at the heart of the problem.

One possibility is that the mind by process of abstraction or induction somehow draws<sup>d</sup> its concepts and generalizations from experience. Aquinas is representative of this view. He adopts Aristotle's notion that the intellect is like a tablet on which nothing is written. This *tabula rasa* depends upon the senses and the imagination for the materials out of which concepts are formed. For the intellect to understand actually Aquinas writes not only when it acquires new knowledge but also when it uses knowledge already acquired there is need for the act of the imagination and of the other powers.

Without experience the mind would remain empty but experience itself does not fill the intellect with ideas. The activity of the sensitive faculty is not by itself the cause of knowledge. The perceptions and images furnished by sense experience Aquinas writes need to be made actually intelligible and this requires the activity of the intellect not merely its passivity in receiving impressions from experience. For this reason he concludes it cannot be said that sensitive knowledge is the total and perfect cause of intellectual knowledge but

even more emphatic than Aristotle or Aquinas in his insistence on the empirical origin of knowledge goes as far as they do in affirming man's knowledge of God and the soul.

Hume in contrast holds that knowledge may go beyond experience only if it is knowledge of the relation of our ideas, as exemplified in the science of mathematics. Precisely because mathematics is not knowledge of matters of fact or real existence its propositions are according to Hume discoverable by the mere operation of thought without dependence on what is anywhere existent in the universe. But with regard to matters of fact Hume thinks that "experience is our only guide."

Any science which claims to be knowledge of reality or existence rather than of the relations between ideas, is thus limited to the realm of expenenceable objects. According as the objects of a science fall within experience so also must its conclusions be tested by reference to experience. Experience is the ultimate test of what truth there is in the propositions of natural science. Only the propositions of mathematics can have a validity which does not require empirical verification.

By these criteria Hume challenges the validity of metaphysics or natural theology. Such disciplines claim to be knowledge of real existences, but their objects are not expenenceable and their conclusions cannot be empirically verified. The existence of God and the immortality of the soul may be objects of faith but they are not verifiable conclusions of science nor for that matter can metaphysics give us certain knowledge of the ultimate constitution of the physical world if that involves knowledge of substances and causes which lie behind the phenomena and outside of experience. "All the philosophy in the world," Hume writes, "and all the religion will never be able to carry us beyond the usual course of experience."

Kant like Hume limits theoretic knowledge to mathematics and the study of nature. A metaphysics which pretends to know objects outside the phenomenal order cannot be defined. "The understanding has no power to decide whether, "whether other perceptions besides those which belong to the total of our possible experience exist, and consequently

whether some other sphere of matter exists. What transcends all possible experience in other words cannot be known at least not in the manner of the speculative sciences; only the moral sciences, proceeding in a different fashion have access to the realm of the supra-sensible."

Kant's position seems to resemble Hume's. But it involves a quite different conception of mathematics and natural science especially the latter which Kant divides into pure and empirical physics. Kant identifies pure physics with the metaphysic of nature in distinction from the metaphysic of morals "the one a theoretic, the other a practical science." For Kant the principles of both mathematics and pure physics are *a priori* rather than *a posteriori*; the objects of both are objects of actual or possible experience.

In the classification of sciences the natural sciences are usually set apart from mathematics, as well as from metaphysics, by being called empirical or experimental. These names signify not merely the inductive method by which the knowledge is obtained from experience they also imply that hypotheses however formulated and conclusions, however reached must be tested by the facts of experience. Newton states it as a rule of reasoning, "in experimental philosophy [that] we are to look upon propositions inferred by general induction from phenomena as accurately or very nearly true notwithstanding any contrary hypotheses that may be imagined till such time as other phenomena occur by which they may either be made more accurate or liable to exceptions." In similar tenor La Bruyere says that "we ought in every instance to submit our reasoning to the test of experiment and never to search for truth but by the natural road of experiment and observation."

The two words "empirical" and "experimental" should not however be used interchangeably. No science can be experimental without being empirical but as the chapter on Astronomy indicates the converse does not appear to be true.

There seem to be three different types of experience from which knowledge can be derived: (1) the ordinary everyday experiences which men accumulate without mal-

in other words all that is done with the sensations impressions or ideas—whatever term is used for the original data of experience—consists in their reproduction by memory and imagination and their comparison combination and connection in various ways to produce complex ideas judgments and trains of reasoning then the entire content of human knowledge can be reduced to elements derived exclusively from experience

Whether this position is taken *with* or *without* qualification depends on the disposition that is made of the problem of universals or abstractions which is more fully discussed in the chapters on *IDEAS* *SIMILARITY* and *UNIVERSAL*. Locke's treatment of abstract ideas and the special consideration given by Hume to the concepts of mathematics suggest that there are kinds or aspects of knowledge which cannot be accounted for by reduction to experience Both men introduce a certain qualification upon their empiricism However slight that may be it does not appear in Hobbes and Berkeley for they completely deny the existence of abstract or universal notions in the mind If abstract universal or general applies to names alone then the mind or understanding adds nothing to and does not radically transform the materials of experience

THE CONTROVERSY concerning experience and knowledge can also be stated in terms of the opposition between the *a priori* and the *a posteriori* These terms are sometimes used to signify what is possessed before and what comes after or from experience and sometimes they are used to indicate without reference to the time order what is independent of and what is dependent upon experience

The distinction between the *a priori* and the *a posteriori* is not made in the same way with respect to propositions or judgments and with respect to reasoning or inference The distinction and its significance for science and philosophy are discussed in the chapters on *JUDGMENT* and *REASONING* It is sufficient here to point out that an *a priori* judgment is not determined by experience nor does it need empirical verification

It might at first be supposed that those who agree in thinking that experience is just one—

not the only—source of knowledge would also agree that some judgments especially the basic propositions of science are *a priori* But this does not appear to be the case Bacon for example like Aristotle holds that the principles of the various sciences are derived by induction from experience There are and can exist he writes but two ways of investigating and discovering truth The one hurried on rapidly from the senses and particulars to the most general axioms and from them as principles and then supposed indisputable truth derives and discovers the intermediate axioms The other constructs its axioms from the senses and particulars by ascending continually and gradually till it finally arrives at the most general axioms All axioms on this view are *a posteriori* propositions

Descartes and Kant while differing in the terms of their analysis think as we have seen that the mind itself provides the ground for certain judgments which are therefore *a priori* It does not even seem to be the case that those who make experience the only source of knowledge regard all propositions as *a posteriori* Hume's treatment of mathematical propositions and James' treatment of axioms or necessary truths seem to be the exceptions here

There is still another way in which the issue can be stated The question is whether human knowledge extends to objects beyond experience to things or beings which are not sensible and which transcend all possible experience

Again it might be supposed that those who take an *a posteriori* view of the origin of knowledge would also limit apprehension to things experienceable But Aristotle and Aquinas seem to say that the origin of knowledge from experience does not restrict the knowable to things capable of being experienced Aquinas cites Aristotle's work on the heavens to show that we may have a scientific knowledge of things we cannot experience by way of negation and by their relation to material things He would hold what is true of astronomy to be even more the case in metaphysics and theology Even though all our concepts are abstracted from experience we can by means of them reach beyond the sensible world to purely intelligible realities—to immaterial and non sensible beings or aspects of being Locke who may be thought

of discovery rather than of induction or verification. Hypotheses may result from such explorations, but in the first instance the experimentation may be undertaken without the guidance of hypotheses. This employment of experimental technique is illustrated by Faraday's remark that "the science of electricity is in that state in which every part of it requires experimental investigation not merely for the discovery of new effects, but what is just now of far more importance the development of the means by which the old effects are produced."

Experimental exploration apart from the direction of hypotheses, seems to be a procedure of trial and error. Experimentation in this sense reflects what Hippocrates had in mind when he spoke of the experiment per ille. In the work of Hippocrates at the very beginning of empirical science recourse to experiment far from being the most prized technique signified a lack of scientific knowledge. Only the physician who could not cure the patient by art based on science took the risk of experimenting —of proceeding by trial and error.

## OUTLINE OF TOPICS

1 Various conceptions of experience	46
2 Experience in relation to the acts of the mind	
2a Memory and imagination as factors in or products of experience	47
2b The empirical sources of induction, abstraction, generalization	
2c The transcendental or innate structure of the mind as a condition of experience	
2d The <i>a priori</i> and <i>a posteriori</i> in judgment and reasoning	48
3 Experience in relation to organized knowledge, art and science	
3a Particular experiences and general rules as conditions of expertness or skill; the contrast between the empiric and the artist	
3b The question regarding the role of experience in science	479
4 Experience as measurement, the scope of human knowledge	
4a The knowability of that which is outside experience in the supra-sensible, the noumenal or transcendent	
4b Verification by experience as the ultimate test of truth	480
5 The theory of experimentation in scientific method	
5a Experimental exploration and discovery; the formulation of hypotheses	
5b Experimental verification; the testing of hypotheses	481
5c Experimental measurement; the application of mathematics	
6 The man of experience in practical affairs	
6a Experience as indispensable to sound judgment and prudence	
6b The role of experience in politics; the lessons of history	
6c Mysterious or religious experience; experience of the supernatural	
7 Sanctity of experience as an ideal of human life	483

special effort to investigate explore or test (2) the special data of experience which men collect by undertaking methodical research and making systematic observations with or without apparatus and (3) experiences artificially produced by men who exercise control over the phenomena and with respect to which the observer himself determines the conditions of his experience Those experiences which are used to prove a scientific truth James writes are for the most part artificial experiences of the laboratory gained after the truth itself has been conjectured

Of these three only the last is an experimental experience The first type of experience may be employed by the scientist but it is seldom sufficient or reliable enough for his purposes The distinction between the empirical sciences which are and those which are not experimental turns on the difference between the second and third types

It is not always possible for the scientist to perform experiments as for example in astronomy where the phenomena can be methodically observed and exactly recorded but cannot be manipulated or controlled Among the great books of natural science the biological writings of Hippocrates Aristotle Galen and Darwin the astronomical works of Ptolemy Copernicus Kepler and Newton and the clinical studies of Freud are examples of scientific works which are more or less empirical but not experimental In contrast Galileo's *Tuo Deu Sciences* Newton's *Optics* Harvey's *Motion of the Heart and Blood* Lavoisier's *Elements of Chemistry* and Faraday's *Experimental Researches in Electricity* represent empirical science which has recourse to experimentation at crucial points

ON THE SIDE OF their production experiments are like inventions They do not happen by chance or without the intervention of art They are usually performed under carefully controlled conditions and by means of apparatus artfully contrived This explains the interplay between technology and experimental science Progress in each occasions progress in the other

On the side of their utility experiments seem to serve three different though related purposes in scientific work In those branches of physics

which are both mathematical and experimental the experiment enables the scientist to make exact measurements of the phenomena and so to determine whether one or another mathematical formulation fits the observable facts of nature Investigating accelerated motion Galileo seeks not only to demonstrate its definition and its properties but also to show that experimental results agree with and exactly correspond with those properties which have been one after another demonstrated by us

The experiment of the inclined plane yields measurements which exemplify those ratios between space and time that are determined by one rather than by another mathematical definition of the acceleration of a freely falling body The experiment is thus used to decide between two competing mathematical theories choosing that one best fitting natural phenomena In those sciences Galileo writes in which mathematical demonstrations are applied to natural phenomena the principles once established by well chosen experiments become the foundation of the entire super structure

Concerned with the phenomena of heat Fourier makes the same point concerning the relation of mathematics and experiments

Mathematical analysis he says can deduce from general and simple phenomena the expression of the laws of nature but the special application of these laws to very complex effects demands a long series of exact observations for which experiments are needed

In addition to testing hypotheses and providing measurements whereby mathematical formulations can be applied to nature experiments function as the source of inductions A crucial experiment constitutes a single clear case from which a generalization can be drawn that is applicable to all cases Newton's optical experiments are of this sort He calls this use of experiments the method of analysis It consists in making experiments and observations and in drawing general conclusions from them by induction And although the arguing from experiments and observations by induction be no demonstration of general conclusions yet it is the best way of arguing which the nature of things admits of

A third use for experiments is in the exploration of new fields of phenomena for purposes

of discovery, rather than of induction or verification. Hypotheses may result from such explorations but in the first instance the experimentation may be undertaken without the guidance of hypotheses. This employment of experimental technique is illustrated by Faraday's remark that "the science of electricity is in that state in which every part of it requires experimental investigation not merely for the discovery of new effects but what is just now of far more importance the development of the means by which the old effects are produced

Experimental exploration apart from the direction of hypotheses, seems to be a procedure of trial and error. Experimentation in this sense reflects what Hippocrates had in mind when he spoke of "the experiment perilous". In the work of Hippocrates at the very beginning of empirical science recourse to experiment far from being the most prized technique, gave fed a lack of scientific knowledge. Only the physician who could not cure the patient by art based on science took the risk of experimenting —of proceeding by trial and error.

## REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad* BK II [62-283] 12d the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of p<sub>12</sub>e 12.

**PAGE SECTIONS.** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 117. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page, the letters c and d to the upper and lower halves of the right hand side of the page. For example, in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS.** One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference line numbers in brackets. In certain cases, e.g., *Iliad* BK II [62-283] 12d

**BIBLIOGRAPHICAL REFERENCES.** The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows, e.g., OLD TESTAMENT *Nehemiah* 7:45-(D) II *Esther* 7:46.

**SYMBOLS.** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference; passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II [26, 28] 12d the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 1.

**PAGE SECTIONS.** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology*, 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page; the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c, the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS.** One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference line numbers in brackets are given in certain cases, e.g. *Iliad* BK II [6, 28] 12d.

**BIBLE REFERENCES.** The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows, e.g. Old TESTAMENT *Achimiah* 7:45—(D) *II Esdras* 7:46.

**SYMBOLS.** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference; *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

## Chapter 26 FAMILY

### INTRODUCTION

THE human family according to Rousseau is the most ancient of all societies and the only one that is natural. On the naturalness of the family there seems to be general agreement in the great books although not all would claim like Rousseau that it is the *only* natural society. The state is sometimes also regarded as a natural community but its naturalness is not as obvious and has often been disputed.

The word natural applied to a community or association of men can mean either that men *instinctively associate with one another as do bees and buffaloes* or that the association in question while voluntary and to that extent conventional is also necessary for human welfare. It is in this sense of necessity or need that Rousseau speaks of family ties as natural. The children remain attached to the father only so long as they need him for their preservation he writes. As soon as this need ceases the natural bond is dissolved. If after that they remain united they continue so no longer naturally but voluntarily and the family itself is then maintained only by convention.

Locke appears to attribute the existence of the human family to the same sort of instinctive determination which establishes familial ties among other animals though he recognizes that the protracted infancy of human offspring make the conjugal bonds more firm and lasting in man than the other species of animals. Since with other animals as well as in the human species the end of conjunction between male and female [is] not barely procreation but the continuation of the species it ought to last in Locke's opinion even after procreation so long as is necessary to the nourishment and support of the young ones who are to be sustained by those who got them till they are able to shift and support for themselves. This rule he adds which the infinite

wise Maker hath set to the works of His hands, we find the inferior creatures steadily obey.

Yet Locke does not reduce the association of father mother and children entirely to a divinely implanted instinct for the perpetuation of the species. Conjugial society he writes, is made by a voluntary compact between man and woman and though it consists chiefly in such a communion and right in one another's bodies as is necessary to its chief end procreation yet it draws with it mutual support and assistance and a communion of interests too.

If the human family were entirely an instinctively formed society we should expect to find the pattern or structure of the domestic community the same at all times and everywhere. But since the time of Herodotus historians and later anthropologists have observed the great diversity in the institutions of the family in different tribes or cultures or even at different times in the same culture. From his own travels among different peoples Herodotus reports a wide variety of customs with respect to marriage and the family. From the travels of other men Montaigne culls a similar collection of stories about the diversity of the mores with respect to sex especially in relation to the rules or customs which hedge the community of man and wife.

Such facts raise the question whether the pattern of monogamy pictured by Locke represents anything more than one type of human family—the type which predominates in western civilization or even more narrowly in Christendom. Marx for instance holds that the structure of the family depends on the character of its economical foundation and insists that it is of course just as absurd to hold the Teutonic Christian form of the family to be absolute and final as it would be to apply that character to the ancient Roman the ancient

Greek or the Eastern forms which moreover taken together form a series in historic development

Though the observation of the various forms which the human family takes has led some writers to deny the naturalness of the family—at least so far as its naturalness would mean a purely instinctive formation—it has seldom been disputed that the family fulfills a natural human need. Conventional in structure the family remains natural as a means and spenable to an end which all men naturally desire. There must be a union of those who cannot exist without each other. Aristotle writes namely of male and female that the race may continue and he goes on to say that this union is formed not of deliberate purpose but because in common with other animals and with plants mankind have a natural desire to leave behind them an image of themselves.

The human infant as Locke observes, requires years of care in order to survive. If the family did not exist as a relatively stable organization to serve this purpose some other social agency would have to provide sustained care for children. But wherever we find any other social units, such as tribes or cities there we also find some form of the family in existence not only performing the function of rearing children but also being the primitive social group out of which all larger groupings seem to grow or to be formed. Aristotle for example describes the villa or tribe as growing out of an association of families just as later the city or state comes from a union of villages.

We have seen that the naturalness of the family—as answering a natural need—is not incompatible with its also being a product of custom or convention. The facts reported by Herodotus, Montaigne and Darwin which show the variability of families in size and membership in form and government do not exclude but on the contrary emphasize the further fact that wherever men live together at all they also live in families.

Whether or not the political community is also a natural society and if so whether it is natural in the same way as the family are questions reserved for the chapter on STATE. But it should be noted here that for some writers, for Aristotle particularly and to a lesser extent

for Locke the naturalness of the family not only points to a natural development of the state but also helps to explain how in the transition from the family to the state paternal government gives rise to royal rule or absolute monarchy. Even Rousseau who thinks that the family is the only natural society finds in the correspondence between a political ruler and a father reason for saying that the family may be called the first model of political societies.

In WESTERN CIVILIZATION a family normally consists of a husband and wife and their offspring. If the procreation and rearing of offspring is the function or even a function which the family naturally exists to perform then a childless family cannot be considered normal. Hegel suggests another reason for offspring. He sees in children the bond of union which makes the family a community.

The relation of love between husband and wife he writes is in itself not objective because even if their feeling is their substantial unity still this unity has no objectivity. Such an objectivity parents first acquire in their children in whom they can see objectified the entirety of their union. In the child a mother loves its father and he its mother. Both have their love objectified for them in the child. While in their goods their unity is embodied only in an external thing in their children it is embodied in a spiritual one in which the parents are loved and which they love.

Until recent times when it has been affected by urban industrial conditions, the family tended to be a much larger unit not only with regard to the number of children but also with respect to other members and relationships. The household included servants if not slaves it included blood relatives in various degrees of consanguinity. Its range extended over three or even four generations. Sancho Panza's wife for instance pictures the ideal marriage for her daughter as one in which we shall have her always under our eyes and be all one family parents and children, grandchildren and sons in law and the peace and blessing of God will dwell among us. Even though they belong to the nineteenth century the families in War and Peace indicate how different is the domestic

## Chapter 26 FAMILY

### INTRODUCTION

THE human family according to Rousseau is the most ancient of all societies and the only one that is natural. On the naturalness of the family there seems to be general agreement in the great books although not all would claim like Rousseau that it is the *only* natural society. The state is sometimes also regarded as a natural community but its naturalness is not as obvious and has often been disputed.

The word natural applied to a community or association of men can mean either that men *instinctively* associate with one another as do bees and buffaloes or that the association in question is *wholly voluntary* and to that extent conventional is also *necessary* for human welfare. It is in this sense of necessity or need that Rousseau speaks of family ties as natural. The children remain attached to the father only so long as they need him for their preservation he writes. As soon as this need ceases the natural bond is dissolved. If after that they remain united they continue so no longer naturally but voluntarily and the family itself is then maintained only by convention.

Locke appears to attribute the existence of the human family to the same sort of instinctive determination which establishes familial ties among other animals though he recognizes that the protracted infancy of human offspring make the conjugal bonds more firm and lasting in man than the other species of animals. Since with other animals as well as in the human species the end of conjunction between male and female [is] not barely procreation but the continuation of the species it ought to last in Locke's opinion even after procreation so long as is necessary to the nourishment and support of the young ones who are to be sustained by those who got them till they are able to shift and support for themselves. This rule he adds which the infinite

wise Maker hath set to the works of His hands, we find the inferior creatures steadily obey.

Yet Locke does not reduce the association of father mother and children entirely to a divinely implanted instinct for the perpetuation of the species. Conjugal society he writes, is made by a voluntary compact between man and woman and though it consists chiefly in such a communion and right in one another's bodies as is necessary to its chief end procreation yet it draws with it mutual support and assistance and a communion of interests too."

If the human family were *entirely* an instinctively formed society we should expect to find the pattern or structure of the domestic community the same at all times and everywhere. But since the time of Herodotus historians and later anthropologists have observed the great diversity in the institutions of the family in different tribes or cultures or even at different times in the same culture. From his own travels among different peoples Herodotus reports a wide variety of customs with respect to marriage and the family. From the travels of other men Montaigne culls a similar collection of stories about the diversity of the mores with respect to sex especially in relation to the rules or customs which hedge the community of man and wife.

Such facts raise the question whether the pattern of monogamy pictured by Locke represents anything more than one type of human family—the type which predominates in western civilization or even more narrowly in Christendom. Marx for instance holds that the structure of the family depends on the character of its economical foundation and insists that it is of course just as absurd to hold the Teutonic Christian form of the family to be absolute and final as it would be to apply that character to the ancient Roman the ancient

## CHAPTER 26 FAMILY

Greek or the Eastern forms which moreover taken together form a series in historic development.

Though the observation of the various forms which the human family takes has led some writers to deny the naturalness of the family—at least so far as its naturalness would mean a purely instinctive formation—it has seldom been disputed that the family fulfills a natural human need. Conventional in structure the family remains natural as a means both sensible to an end which all men naturally desire. There must be a union of those who cannot exist without each other. Aristotle writes, namely of male and female that the race may continue and he goes on to say that this union is formed not of deliberate purpose but because in common with other animals, and with plants mankind have a natural desire to leave behind them an image of themselves."

The human infant as Locke observes, requires years of care in order to survive. If the family did not exist as a relatively stable organization to serve this purpose some other social agency would have to provide sustained care for children. But wherever we find any other social unit, such as tribes or cities, there we also find some form of the family in existence not only performing the function of rearing children but also being the primitive social group out of which all larger groupings seem to grow or to be formed. Aristotle for example describes the village or tribe as growing out of an association of families, just as later the city or state comes from a union of villages.

We have seen that the naturalness of the family—as answering a natural need—is not incompatible with its also being a product of custom or convention. The facts reported by Herodotus, Montaigne and Darwin which show the variability of families in size and membership in form and government do not exclude but on the contrary emphasize the other fact that wherever men live together at all, they also live in families.

Whether or not the political community is also a natural society, and if so whether it is natural in the same way as the family are questions reserved for the chapter on STATE. But it should be noted here that for some writers—Aristotle particularly and to a lesser extent

for Locke the naturalness of the family not only points to a natural development of the state but also helps to explain how in the transition from the family to the state paternal government gives rise to royal rule or absolute monarchy. Even Rousseau who thinks that the family is the *only* natural society, finds in the correspondence between a political ruler and a father reason for saying that the family may be called the first model of political societies.

IN WESTERN CIVILIZATION a family normally consists of a husband and wife and their offspring. If the procreation and rearing of offspring is the function or even a function, which the family naturally exists to perform then a childless family cannot be considered normal. Hegel suggests another reason for offspring. He sees in children the bond of union which makes the family a community.

The relation of love between husband and wife he writes, is in itself not objective because even if their feeling is their substantial unity still this unity has no objectivity. Such an objectivity parents first acquire in their children in whom they can see objectified the entirety of their union. In the child a mother loves its father and he its mother. Both have their love objectified for them in the child. While in their goods their unity is embodied only in an external thing, in their children it is embodied in a spiritual one in which the parents are loved and which they love.

Until recent times when it has been affected by urban, industrial conditions, the family tended to be a much larger unit not only with regard to the number of children but also with respect to other members and relationships. The household included servants, if not slaves it included blood relatives in various degrees of consanguinity. Its range extended over three or even four generations. Sancho Panza's wife for instance pictures the ideal marriage for her daughter as one in which we shall have her always under our eyes and be all one family parents and children, grandchildren and sons in law and the peace and blessing of God will dwell among us. Even though they belong to the nineteenth century the families in War and Peace indeed how different is the domestic

establishment under agrarian and semi feudal conditions

But even when it comprised a larger and more varied membership the family differed from other social units such as tribe or state in both size and function. Its membership determined by consanguinity was usually more restricted than that of other groups although blood relationships often more remote may also operate to limit the membership of the tribe or the state. Its function according to Aristotle at least in origin was to supply men's everyday wants, whereas the state went beyond this in aiming at other conditions of a good life.

In an agricultural society of the sort we find among the ancients the household rather than the city is occupied with the problems of wealth. In addition to the breeding and rearing of children and probably because of this in part the family as a unit seems to have been concerned with the means of subsistence on the side of both production and consumption. Its members shared in a division of labor and in a division of the fruits thereof.

Apart from those industries manned solely by slave labor in the service of the state the production of goods largely depended on the industry of the family. In modern times this system of production came to be called the domestic as opposed to the factory system. It seems to persist even after the industrial revolution. But according to Marx this modern so called domestic industry has nothing except the name in common with the old fashioned domestic industry the existence of which presupposes independent urban handicrafts independent peasant farming and above all a dwelling house for the laborer and his family.

In effect the industrial revolution produced an economy in which not only agriculture but the family ceased to be central. The problem shifts from the wealth of families to the wealth of nations even as production shifts from the family to the factory. Modern industry according to Marx by assigning an important part in the process of production outside the domestic sphere to women to young persons and to children of both sexes creates a new economical foundation.

The family was for centuries what the factory and the storehouse have only recently become in an era of industrialism. For the ancients the problems of wealth—its acquisition, accumulation and use—were domestic not political. The so called art of getting wealth Aristotle writes is according to some identical with household management according to others a principal part of it. In his own judgment property is a part of the household and the art of acquiring property is a part of the art of managing the household—but a part only because the household includes human beings as well as property and is concerned with the government of persons as well as the management of things.

The foregoing throws light on the extraordinary shift in the meaning of the word economics from ancient to modern times. In the significance of their Greek roots the word polity signifies a state the word economy a family and as politics referred to the art of governing the political community so economics referred to the art of governing the domestic community. Only in part was it concerned with the art of getting wealth. As the chapter on WEALTH indicates Rousseau tries to preserve the broader meaning when he uses the phrase political economy for the general problems of government but for the most part in modern usage economics refers to a science or art concerned with wealth and it is political in the sense that the management of wealth and of men with respect to wealth has become the problem of the state rather than the family. Not only has the industrial economy become more and more a political affair but the character of the family as a social institution has also changed with its altered economic status and function.

The entire question about the family in relation to the state has been in ancient as well as in modern times whether the family has natural rights which the state cannot justly invade or transgress.

The proposal in Plato's *Laws*—that the wives of our guardians are to be common and their children are to be common and no parent is to know his own child nor any child his parent—was as radical in the fifth century

as its counterpart would be today. When Socrates proposes this, Glaucon suggests that the possibility as well as the utility of such a law may be subject to a good many doubts. But Socrates does not think that there can be any dispute about the very great utility of having wives and children in common: the possibility he adds, is quite another matter and will be very much disputed.

Aristotle questions both the desirability and possibility. The premise from which the argument of Socrates proceeds, he says, is the greater the unity of the state the better. He denies this premise. Is it not obvious, he asks, that a state may at length attain such a degree of unity as to be no longer a state?—since the nature of a state is to be a plurality and in tending to a greater unity from being a state it becomes a family and from being a family an individual. Hence we ought not to attain its greatest unity even if we could for it would be the destruction of the state. In addition the scheme taken literally is unpracticable.

It is significant that Aristotle's main argument against Plato's communism (which includes the community of property as well as the community of women and children) is based upon the nature of the state rather than on the rights of the family. It seems to have been a prevalent view in antiquity at least among philosophers that the children should be regarded as belonging to the state rather than to their parents. Antigone's example shows however that this view was by no means without exception. Her defiance of Creon, based on the unwritten and unfailing statutes of heaven, is also and stakes for the majesty of kindred blood. In this sense it constitutes an affirmation of the rights and duties of the family.

In the Christian tradition on the rights of the family as against the state are also defended by reference to divine law. The point is not that the state is less a natural community than the family in the eyes of a theologian like Aquinas but in addition to having a certain priority in the order of nature the family more directly than the state is of divine origin. Not only is it founded on the sacrament of matrimony but the express commandments of God declare the

duties of care and obedience which bind us members together. For the state to interfere in those relationships between parents and children or between husband and wife which fall under the regulation of divine law would be to exceed its authority and hence to act without right and in violation of rights founded upon a higher authority.

In the Christian tradition philosophers like Hobbes and Kant state the rights of the family in terms of natural law or defend them as natural rights. Because the first instruction of children under Hobbes, depends on the care of their parents it is necessary that they should be obedient to them while they are under their tuition. Originally the father of every man was also his sovereign lord with power over him of life and death. When the fathers of families relinquished such absolute power in order to form a commonwealth or state they did not lose nor did they have to give up according to Hobbes, all control of their children. Nor would there be any reason, he goes on, why any man should desire to have children, or take the care to nourish and instruct them if they were afterwards to have no other benefit from them than from other men. And this he says accords with the Fifth Commandment.

In the section of his *Science of Rights* devoted to the rights of the family as a domestic society Kant argues that from the fact of procreation there follows the duty of preserving and rearing children. From this duty he derives the right of parents to the management and training of the child so long as it is itself incapable of making proper use of its body as an organism and of its mind as an understanding. This includes its nourishment and the care of its education. It also includes in general the function of forming and developing it practically, that is, may be able in the future to maintain and advance itself and also its moral culture and development the guilt of neglecting it falling upon the parents.

As is evident from Hobbes and Kant the rights of the family can be vindicated without denying that the family like the individual owes obedience to the state. In modern terms, at least, the problem is partly stated by the question To what extent can parents justly claim exemption from political interference in

the control of their own children? But this is only part of the problem. It must also be asked whether in addition to regulating the family for the general welfare of the whole community the state is also entitled to interfere in the affairs of the household in order to protect children from parental mismanagement or neglect. Both questions call for a consideration of the form and principles of domestic government.

THE KINDS OF RULE and the relation between ruler and ruled in the domestic community have a profound bearing on the theory of government in the larger community of the state. Many of the chapters on the forms of government—especially CONSTITUTION MONARCHY and TYRANNY—indicate that the great books of political theory from Plato and Aristotle to Locke and Rousseau derive critical points from the comparison of domestic and political government.

We shall pass over the master slave relationship both because that is considered in the chapter on SLAVERY and because not all households include human chattel. Omitting this two fundamental relationships which domestic government involves remain to be examined the relation of husband and wife and of parents and children.

With regard to the first there are questions of equality and administrative supremacy. Even when the wife is regarded as the complete equal of her husband the administrative question remains for there must either be a division of authority or unanimity must prevail or one—either the husband or the wife—must have the last word when disagreement must be overcome to get any practical matter decided. So far as husband and wife are concerned should the family be an absolute monarchy or a kind of constitutional government?

Both an ancient and a modern writer appear to answer this question in the same way. A husband and father Aristotle says rules over wife and children both free but the rule differs the rule over his children being a royal over his wife a constitutional rule. Yet the relation between husband and wife in Aristotle's view is not perfectly constitutional. In the state the citizens rule and are ruled in turn

on the supposition that their natures are equal and do not differ at all. In the family however Aristotle thinks that although there may be exceptions to the order of nature the male is by nature fitter for command than the female.

According to Locke the husband and wife though they have but one common concern yet having different understandings will unavoidably sometimes have different wills too. It therefore being necessary that the last determination (*i.e.* the rule) should be placed somewhere it naturally falls to the man's share as the abler and the stronger. But this Locke thinks leaves the wife in the full and true possession of what by contract is her peculiar right and at least gives the husband no more power over her than she has over his life the power of the husband being so far from that of an absolute monarch that the wife has in many cases a liberty to separate from him where natural right or their contract allows it.

In the so called Marriage Group of the *Canterbury Tales* Chaucer gives voice to all of the possible positions that have ever been taken concerning the relation of husband and wife. The Wife of Bath for example argues for the rule of the wife. She claims that nothing will satisfy women until they have the sovereignty as well upon their husband as their love and to have mastery their man above. The Clerk of Oxford in his tale of patient Griselda presents the wife who freely admits to her husband

When first I came to you just so left I my will and all my liberty. The Franklin in his tale allows the mastery to neither wife nor husband save that the name and show of sovereignty would belong to the latter. He dares to say

That friends each one the other must obey  
If they d be friends and long keep company  
Love will not be constrained by mastery  
Women by nature love their liberty  
And not to be constrained like my thrall  
And so do men if say the truth I shall  
Thus did she take her servant and her lord  
Servant in love and lord in their marriage  
So was he both in lordship and bondage

WHILE THERE MAY be disagreement regarding the relation between husband and wife there is none regarding the inequality between parents and children during the offspring's minority.

that "all men by nature may enjoy 'equal liberty' to his natural freedom, without being subject to the will or authority of any other man." Children, according to Locke, are not born in this full state of equality though they are "born to it."

Paternal power over absolute rule, over children arises from this fact. So long as the child "is in an estate wherein he has no understanding of his own to direct his will," Locke thinks he "is not to have any will of his own to follow." If that understands for him trust will for him too he must prescribe to his will, and regulate his actions." But Locke adds the important qualification that when the son "comes to the estate which made his father a free man, the son is a free man too."

Because children are truly inferior in competence there would seem to be no injustice in their being ruled by their parents or in the rule being absolute in the sense that children are precluded from exercising a decisive voice in the conduct of their own or their family's affairs. Those who think that heirs cannot claim the absolute authority of parental rule frequently use the word "despotic" to signify unjustified paternalism—a transference to the son of a type of dominion which can be justified only in the family.

The nature of despotism as absolute rule is discussed in the chapters on Monarchy and Tyranny but its relevance here makes it worth repeating that the Greek word from which "despot" comes, like its Latin equivalent *paterfamilias*, signifies the ruler of a household and carries the connotation of absolute rule—the complete master of the father over the children and the servants, if not over the wife. A cordial, it would seem to be nothing less than a reference to domestic government as despotism, at least not to the extent that in the case of the children, absolute rule is justified by their immaturity. The problem arises only in respect to despotism in the state when one man rules absolutely over men absolutely as a parent rules a child.

The great defender of the doctrine that the sovereign must be absolute "to the extent that there is no morality at all" sees no difference between the man's rule of a state—the "sovereign by whom laws are made—and those of a father as the

natural master of his family. "The rights and consequences of both paternal and despotic dominion Hobbes maintains, are the very same with those of a sovereign by institution." On the other hand Rousseau an equally trenchant opponent of absolute rule, uses the word despotism only in an invidious sense for what he regards as illegitimate government—absolute monarchy. Even if there were as close an analogy as many authors maintain between the State and the family he writes, "it would not follow that the rules of conduct proper for one of these societies would be also proper for the other."

Rousseau even goes so far as to deny that parental rule is despotic in his sense of that term. With regard to paternal authority from which some writers have derived absolute government he remarks that "nothing can be further from the vicious spirit of despotism than the mildness of that authority which looks more to the advantage of him who obeys than to that of him who commands. He agrees with Locke in the observation that unlike the political despot, the father is the child's master no longer than his help is necessary." When both are equal, the son is perfectly independent of the father and owes him "only respect and not obedience."

Misrule in the family then would seem to occur when these conditions or limits are violated. Parents may try to continue their absolute control past the point at which the children have become mature and are competent to take care of their own affairs. A parent who does not relinquish his absolute rule at this point can be called "despotic" in the derogatory sense of that word.

Appling a distinction made by some political writers, the parent is tyrannical rather than despotic when he uses the children for his own good, treats them as property, to exploit, even at a time when his absolute direction of their affairs would be justified if it were for the children's welfare. The essence of parental tyranny arises in its sharpest form the question of the state's right to intervene in the family for the good of its members.

THE CENTRAL ELEMENT in the domestic establishment is, of course the institution of mar-

nage The discussion of marriage in the great books deals with most of the moral and psychological if not all of the sociological and economic aspects of the institution The most profound question perhaps is whether marriage is merely a human institution to be regulated solely by custom and civil law or a contract under the sanctions of natural law or a religious sacrament signifying and imparting God's grace The last two of these alternatives may not exclude one another but those who insist upon the first usually reject the other two

Some like the Parson in the *Canterbury Tales* consider marriage not only a natural but also a divine institution—a sacrament ordained by God Himself in Paradise and confirmed by Jesus Christ as witness St Matthew in the gospel For this cause shall a man leave father and mother and shall cleave to his wife and they twain shall be one flesh which be tokens the knitting together of Christ and of Holy Church

Others like Kant seem to stress the character of marriage as an institution sanctioned by natural law The natural union of the sexes he writes proceeds either according to the mere animal nature (*vaga libido tenus vulnus aga fornicatio*) or according to law The latter is marriage (*matrimonium*) which is the union of two persons of different sex for life long reciprocal possession of their sexual faculties Kant considers offspring as a natural end of marriage but not the exclusive end for then the marriage would be dissolved of itself when the production of children ceased Even assuming he declares that enjoyment in the reciprocal use of the sexual endowments is an end of marriage yet the contract of marriage is not on that account a matter of arbitrary will but is a contract necessary in its nature by the Law of Humanity In other words if a man and a woman have the will to enter on reciprocal enjoyment in accordance with their sexual natures they must necessarily marry each other

Still others see marriage primarily as a civil contract Freud for example considers the view that sexual relations are permitted only on the basis of a final indissoluble bond between a man and woman as purely a convention of present day civilization Marriage as a set of taboos restricting the sexual life varies from

culture to culture but in Freud's opinion the high water mark in this type of development has been reached in our Western European civilization

The conception of marriage—whether it is merely a civil or a natural and even a divine institution—obviously affects the position to be taken on monogamy on divorce on chastity and adultery and on the comparative merits of the married and the celibate condition The pagans for the most part regard celibacy as a misfortune especially for women as witness the tragedy of the unwedded Electra Christianity on the other hand celebrates the heroism of virginity and encourages the formation of monastic communities for celibates Within the Judaeo Christian tradition there are striking differences Not only were the patriarchs of the Old Testament polygamous but orthodox Judaism and orthodox Christianity also differ on divorce

Augustine explains how a Christian should interpret those passages in the Old Testament which describe the polygamous practices of the patriarchs The saints of ancient times he writes were under the form of an earthly kingdom foreshadowing and foretelling the kingdom of heaven And on account of the necessity for a numerous offspring the custom of one man having several wives was at that time blameless and for the same reason it was not proper for one woman to have several husbands because a woman does not in that way become more fruitful In regard to matters of this sort he concludes whatever the holy men of those times did without lust Scripture passes over without blame although they did things which could not be done at the present time except through lust

On similar grounds Aquinas holds that it was allowable to give a bill of divorce under the law of the Old Testament but it is not allowable under the Christian dispensation because divorce is contrary to the nature of a sacrament The greatest familiarity between man and wife requires the staunchest fidelity which is impossible if the marriage bond can be sundered Within the Christian tradition Locke takes an opposite view of divorce He can see good reason why the society of man and wife should be more lasting than that of

mal and female amongst other creatures, but he does not see why this compact where pre-creation and education are secured and inheritance taken care for may not be made determinable either by consent or at a certain time or upon certain conditions, as well as any other voluntary compact there being no necessity in the nature of the thing that it should always be for life. Against Locke Dr Johnson would argue that to the contract of marriage besides the man and wife there is a third party—Society and if it be considered as a vow—God and therefore it cannot be dissolved by their consent alone.

Laws and customs, however represent only the external or social aspect of marriage. The discussion of these externals cannot give any impression of the inwardness and depth of the problem which marriage is for the individual person. Only the great poems, the great novels and plays, the great books of history and biography can adequately present the psychological and emotional aspects of marriage in the life of individuals. Heightened in narration they give more eloquent testimony than the case histories of Freud to support the proposition that marriage is at all times—in every culture and under the widest variety of circumstances—one of the supreme tests of human character.

The relation between men and women in and out of marriage, the relation of husband and wife before and after marriage, the relation of parents and children—these create crises and tensions, conflicts between love and duty, between reason and the passions from which no individual can entirely escape. Marriage is not only a typically human problem but it is the one problem which both psychologically and morally touches every man, woman, and child. Sometimes the resolution is tragic, sometimes the outcome seems to be happy, almost blessed; but whether a human life is built on this foundation or broken against these rocks it is never shaken in the process and forever shaped.

To some degree each reader of the great books has, in imagination if not in action participated in the trials of Odysseus, Penelope and Telemachus in the afflictions of Hector and Andromache, Alcestis and Admetus, Tom Jones and Sophia, Natasha and Pierre Bezukhov in the trials of Othello, the anguish of Lear,

the decision of Aeneas or the indecision of Hamlet and certainly in the reasoning of Panurge about whether to marry or not. In each of these cases everyone finds some aspect of love in relation to marriage, some phase of parenthood or childhood which has colored his own life or that of his family and he can find somewhere in his own experience the grounds for sympathetic understanding of the extraordinary relation between Electra and her mother Clytemnestra, between Augustine and Monica his mother, between Oedipus and Jocasta, Prince Hamlet and Queen Gertrude, Pierre Bezukhov and his wife or what is perhaps the most extraordinary case of all—Adam and Eve in *Paradise Lost*.

On one point the universality of the problem of marriage and family life seems to require qualification. The conflict between conjugal and illicit love exists in all ages. The entanglement of the bond between man and wife with the ties—of both love and blood—which unite parents and children is equally universal. But the difficulties which arise in marriage as a result of the ideals or the illusions of romantic love seem to constitute a peculiarly modern problem. The ancients distinguished between sexual love and the love of friendship and they understood the necessity for both in the conjugal relationship if marriage is to prosper. But not until the later Middle Ages did men think of matrimony as a way to perpetuate through out all the years the ardor of that moment in a romantic attachment when the lovers find each other without flaw and beyond reproach.

Matters relevant to this modern problem are discussed in the chapter on Love. As is there indicated romantic love though it seems to be of Christian origin may also be a distortion—even an heretical perversion—of the kind of Christian love which is pledged in the reciprocal vows of holy matrimony.

We HAVE ALREADY considered some of the problems of the family which relate to children and youth—the immature members of the human race—such as whether the child belongs to the family or the state and whether the family is solely responsible for the care and training of children or a share of this responsibility falls to the state or the church.

There are other problems. Why do men and women want offspring and what satisfactions do they get from rearing children? For the most part in Christendom and certainly in antiquity the lot of the childless is looked upon as a grievous frustration. To be childless is not merely contrary to nature but for pagan as well as Christian it constitutes the deprivation of a blessing which should grace the declining years of married life. The opposite view so rarely taken is voiced by the chorus of women in the *Medea* of Euripides.

Those who are wholly without experience and have never had children far surpass in happiness those who are parents—the women chant in response to Medea's tragic leave taking from her own babes. The childless because they have never proved whether children grow up to be a blessing or a curse to men are removed from all share in many troubles whilst those who have a sweet race of children growing up in their houses do wear away their whole life through first with the thought how they may train them up in virtue next how they shall leave their sons the means to live and after all this tis far from clear whether on good or bad children they bestow their toil.

Still other questions arise concerning children quite apart from the attitude of parents toward having and rearing them. What is the economic position of the child both with respect to ownership of property and with respect to a part in the division of labor? How has the economic status of children been affected by industrialism? What are the mental and moral characteristics of the immature which exclude them from participation in political life and which require adult regulation of their affairs? What are the criteria—emotional and mental as well as chronological—which determine the classification of individuals as children or adults and how is the transition from childhood to manhood effected economically politically and above all emotionally?

The authors of the great books discuss most of these questions but among them only Freud sees in the relation of children to their parents the basic emotional determination of human life. The fundamental triangle of love and hate, devotion and rivalry consists of father, mother and child. For Freud all the intricacies and per-

versions of love, the qualitative distinctions of romantic conjugal and illicit love, the factors which determine the choice of a mate and success or failure in marriage and the conditions which determine the emergence from emotional infantilism—all these can be understood only by reference to the emotional life of the child in the vortex of the family.

The child's great task according to Freud is that of freeing himself from the parents for only after this detachment is accomplished can he cease to be a child and so become a member of the social community. These tasks are laid down for every man but Freud writes, "it is noteworthy how seldom they are carried through ideally that is how seldom they are solved in a manner psychologically as well as socially satisfactory." In neurotics however he adds, "this detachment from the parents is not accomplished at all."

In one sense it is never fully accomplished by anyone. What Freud calls the ego-ideal—which represents our higher nature and which in the name of the reality principle resists instinctual compliance with the pleasure principle—is said to have its origin in the identification with the father which takes place in the prehistory of every person. Even after an individual has achieved detachment from the family this ego ideal acts as a substitute for the longing for a father and in the form of conscience it continues to exercise the censorship of morals.

ONE OTHER GROUP of questions which involve the family—at least as background—concerns the position or role of women. We have already considered their relation to their husbands in the government of the family itself. The way in which that relation is conceived affects the status and activity of women in the larger community of the state in relation to citizenship and the opportunities for education to the possession of property and the production of wealth (for example the role of female labor in an industrial economy).

Again it is Euripides who gives voice to the plight of women in a man's world in two of his great tragedies, the *Trojan Women* and *Medea*. In the one they cry out under the brunt of the suffering which men leave them to bear in the

backwash of war In the other Medea passionately berates the nominy and bonds, which women must accept in being wives Of all things that have life and sense she says we women are the most hapless creatures first must we buy a husband at great price and then offer ourselves a tyrant set which is an evil worse than the first

The ancient world contains another feminist who goes further than Euripides in speaking for the right of women to be educated like men to share in property with them and to enjoy the privileges as well as to discharge the tasks of citizenship In the tradition of the great books the striking fact is that after Plato the next great declaration of the rights of women should be written by one who is as far removed from him in time and temper as John Stuart Mill

In Plato's *Republic* Socrates argues that if the difference between men and women consists only in women bearing and men begetting children this does not amount to proof that a woman differs from a man in respect to the sort of education she should receive For the same reason he says the guardians and their wives ought to have the same pursuits Since he thinks that the gifts of nature are alike diffused in both Socrates insists that there is no special faculty of administration in a state which a woman has because she is a woman or which a man has by virtue of his sex All the pursuits of men are the pursuits of women also Yet he adds that in all of them a woman is inferior to a man Therefore when he proposes to let women share in the tools of war and the defence of their country Socrates suggests that in the distribution of labors the lighter are to be assigned to the women who are the weaker natures

Mill's tract on *The Subjection of Women* is his fullest statement of the case for social economic and political equality between the sexes In *Representative Government* his defense of women's rights deals primarily with the question of extending the franchise to them Difference of sex he contends is as entirely irrelevant to political rights as difference in height or in the color of the hair All human beings have the same interest in good government Mankind have long since abandoned the only premises which will support the conclusion that women ought not to have votes No one now holds that women should be in personal servitude that they should have no thought wish or occupation but to be the domestic drudges of husbands fathers or brothers It is allowed to unmarried and wants but little of being conceded to married women to hold property and have pecuniary and business interests in the same manner as men It is considered suitable and proper that women should think and write and be teachers As soon as these things are admitted Mill concludes the political disqualification has no principle to rest on

Though no other of the great books speaks so directly for the emancipation of women from domestic and political subjection many of them do consider the differences between men and women in relation to war and love pleasure and pain virtue and vice duty and honor Some are concerned explicitly with the pivotal question—whether men and women are more alike than different whether they are essentially equal in their humanity or unequal Since these are matters pertinent to human nature itself as it is affected by gender the relevant passages are collected in the chapter on Man

## OUTLINE OF TOPICS

1 The nature and necessity of the family

r

2 The family and the state

497

2a Comparison of the domestic and political community in origin structure and function

3 Comparison of the domestic and political community in manner of government

2c The place and rights of the family in the state the control and education of children

498

3 The economics of the family	P. 49
3a The wealth of families the maintenance of the domestic economy	499
3b The effects of political economy the family in the industrial system	
4 The institution of marriage its nature and purpose	
4a Monogamy and polygamy	500
4b The religious view of marriage the sacrament of matrimony	
4c Matrimony and celibacy	501
4d The laws and customs regulating marriage adultery, incest	
4e Divorce	50
5 The position of women	503
5a The role of women in the family the relation of husband and wife in domestic government	
5b The status of women in the state the right to citizenship property education	504
5c Women in relation to war	
6 Parents and children fatherhood motherhood	505
6a The desire for offspring	
6b Eugenics control of breeding birth control	506
6c The condition of immaturity	
6d The care and government of children the rights and duties of the child parental despotism and tyranny	507
6e The initiation of children into adult life	508
7 The life of the family	
7a Marriage and love romantic conjugal and illicit love	
7b The continuity of the family the veneration of ancestors family pride feuds curses	509
7c Patterns of friendship in the family man and wife parents and children brothers and sisters	510
7d The emotional impact of family life upon the child the domestic triangle the symbolic roles of father and mother	511
8 Historical observations on the institution of marriage and the family	512

## REFERENCES

To find the passage cited, use the numbers in heavy type, which are the volume and page numbers of the passage referred to. For example in *4 Homer Iliad* **xii** [65 283] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

**P or S entries.** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example in *53 Psalms* **Psalm 116a** 119b the passage begins in the upper half of page 6 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page; c and d refer to the upper and lower halves of the right hand side of the page. For example in *7 Plato Symposium* **vii** 163b-164c the passage begins in the lower half of the left hand side of page 6 and ends in the upper half of the right hand side of page 164.

**Actno. D 1 o 5 O.** One or more of the main divisions of a work (such as *P*, *AT*, *BK*, *CH*, etc.) are sometimes included in the reference line numbers, in brackets, after *g* or *en* in certain cases, e.g. *Iliad* **x** [126, 83] 12d.

**B & Re x or.** These references are to book, chapter and verse. When the King James and Douay versions differ in text of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (*D*) following, e.g. *Old Test.* **xv** *A&R* *Exodus* 45-(*D*) *II Ed.* 45

**Symbols.** The abbreviation "esp." calls the reader's attention to one or more especially relevant parts of a whole reference; "parva" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of References below; for general guidance in the use of *The Great Lexicon* consult the Preface.

## Chapter 27 FATE

### INTRODUCTION

FATE—sometimes personified sometimes abstract conceived—is the antagonist of freedom in the drama of human life and his tor. So at least it seems to the poets of antiquity. In many of the Greek tragedies, fate sets the stage. Some curse must be fulfilled. A doom is round and is inexorable. But the actors on the stage are far from puppets. Within the framework of the inevitable, man works out his own destiny making the choices from which his personal catastrophe ensues. Oedipus, doomed to kill his father and marry his mother, is not fated to inquire into his past and to discover the secret which when he sees, he wills to see no more. The curse on the house of Atreus does not require Agamemnon to bring Cassandra back from Troy or to step on the purple carpet. The furies which pursue Orestes because himself awakened by mind to his mother Clytemnestra a deed not fired but freely undertaken to avert his father's death.

The ancients did not doubt that men could hope and through choice exercise some control over the disposition of their lives. Tacitus for example while admitting that "most men

cannot part with the belief that each person's future is fixed from his very birth," claims that the wisest of the ancients "leave us the element of choosing our life. At the same time he recognizes an order of events beyond man's power to control, although he finds no agreement regarding its cause—whether it depends "on warding stars" or "primary elements, and on a combination of natural causes." For his own part Tacitus declares, "I suspend my judgment on the question 'whether it is fate and unchangeable necessity or chance which governs the revolutions of human affairs.' In so doing I grant the possibility that not everything which lies beyond man's control is fated. Some of the things which happen with-

out man's willing them may happen by chance or fortune.

It is sometimes supposed that fate and "fortune" are synonymous, or that one has a tragic and the other a happy connotation. It is as if fortune were always good and fate always malevolent. But either may be good or evil from the point of view of man's desires. Al though fate and fortune are hardly the same there is some reason for associating them. Each imposes a limitation on man's freedom. A man cannot compel fortune to smile upon him any more than he can avoid his fate. Though alike in this respect, fate and fortune are also opposed to one another. Fate represents the inexorable march of events. There is no room for fortune unless some things are exempt from necessity. Only that which can happen by chance is in the lap of fortune.

It would seem that fate stands to fortune as the necessary to the contingent. If everything were necessitated fate alone would reign. Contingency would be excluded from nature. Chance or the fortuitous in the order of nature and freedom in human life would be reduced to illusions men cherish only through ignorance of the inevitable.

In a sense fortune is the ally of freedom in the struggle against fate. Good fortune seems to aid and abet human desires. But even misfortune signifies the element of chance which is more congenial than fate if no more amenable to man's concern that he can freely plan his life.

The terms *necessity* and *contingency* cannot be substituted for fate and fortune without loss of significance. As the chapter on *Necessity and Contingency* indicates they are terms in the philosophical lexicon of the order of nature and causality. They may have but they need not have theological implications. Necessity

and contingency can be explained without any reference to the supernatural as is evident from the discussion of these matters in the chapter on CHANCE. But fate and fortune in their origin at least are theological terms.

In ancient poetry and mythology both inevitability and chance were personified as deities or supernatural forces. There were the goddess of Fortune and the three Fates as well as their three evil sisters or counterparts the Furies. The Latin word from which fate comes means an oracle and so signifies what is divinely ordained. What happens by fate is *fatid*—something destined and decreed in the councils of the gods on Olympus or it may be the decision of Zeus to whose rule all the other divinities are subject or as we shall see presently it may be a supernatural destiny which even Zeus cannot set aside.

In any case the notion of fate implies a supernatural will even as destiny implies predestination by an intelligence able not only to plan the future but also to carry out that plan. The inevitability of fate and destiny is thus distinguished from that of merely natural necessity which determines the future only insofar as it may be the inevitable consequence of causes working naturally.

But the ancients do not seem to be fatalists in the extreme sense of the term. To the extent that men can propitiate the gods or provoke divine jealousy and anger the attitude and deeds of men seem to be a determining factor in the actions of the gods. To the extent that the gods align themselves on opposite sides of a human conflict (as in the *Iliad*) or oppose each other (as in the *Odyssey*) it may be thought that what happens on earth merely reflects the shifting balance of power among the gods.

But human planning and willing do not seem to be excluded by the divine will and plan which are forged out of the quarrels of the gods. On the contrary polytheism seems to make fortune itself contingent on the outcome of the Olympian conflict and so permits men a certain latitude of self-determination. Men can struggle against the gods precisely because the gods may be with them as well as against them.

The ultimate power of Zeus to decide the issue may however place the accent on fate.

rather than on freedom. This is certainly so if Zeus is not the master of even his own fate much less the omnipotent ruler among the gods or the arbiter of human destiny. In *Prometheus Bound* the Chorus asks Who is the pilot of Necessity? Prometheus answers, The Fates transform and the unforgetful Furies. The Chorus then asks Is Zeus of lesser might than these? To which Prometheus replies He shall not shun the lot appointed. When they ask what this doom is Prometheus tells them to inquire no more for they verge on mysteries. Later Zeus himself sends Hermes to wrest from Prometheus the secret of what has been ordained for him by all consummating Fate or Fate's relentless law. Prometheus refuses saying that none shall bend my will or force me to disclose to whom 'tis fated he shall fall from power.

The question Aeschylus leaves unanswered is whether Zeus would be able to escape his doom if he could foresee what Fate holds in store for him. The suggestion seems to be that without omniscience the omnipotence of Zeus cannot break the chains of Fate.

*IN THE TRADITION* of Judaeo-Christian theology the problem of fate is in part verbal and in part real. The verbal aspect of the problem concerns the meaning of the word fate in relation to the divine will, providence and predestination. With the verbal matter settled there remains the real problem of God's will and human freedom. The strictly monotheistic conception of an omnipotent and omniscient God deepens the mystery and makes it more difficult than the problem of fate and freedom in pagan thought.

If anyone calls the will or the power of God itself by the name of fate Augustine says let him keep his opinion but correct his language. For when men hear that word according to the ordinary use of language they simply understand by it the virtue of that particular position of the stars which may exist at the time when anyone is born or conceived which some separate altogether from the will of God whilst others affirm that this also is dependent on that will. But those who are of the opinion that apart from the will of God the stars determine what we shall do or what

good things we shall possess or what evils we shall suffer must be referred a hearing by all not only by those who hold the true religion but by those who wish to be worshippers of any gods whatsoever & even false gods For what does it is opinion really amount to but that that no god whatsoever is to be worshipped or prayed to?

Since the word fate has been used for those things which are determined apart from the will of God or man Augustine thinks it would be better for Christians not to use it but to substitute Providence or predestination when they wish to refer to what God wills Aquinas however retains the word fate but restricts its meaning to the ordering of mediate causes by which God wills the production of certain effects

According to the definition given by Boe thus which Aquinas quote Fate is a disposition inherent to changeable things by which Providence connects each one with its proper order Thus fate is not identified with Providence but made subordinate to it The distinction Aquinas explains depends on the way we consider the order of effects by God As being in God Himself the ordering of the effects is called Providence But as being in the mediate causes ordered by God it is called fate While admitting that the divine power or will can be called fate as being the cause of fate he declares that essentially fate is the very disposition or series i.e. order of second cause

The position Lucretius takes seems to be exactly opposite to that of Augustine and Aquinas Lucretius condemns the fatalism of those who believe that the gods control the order of nature and who therefore attribute whatever befalls them to divine ordination For him nature free at once and end of her law begins I see it is seen to do all things spontaneously of herself without the meddling of the gods He tries to teach men that every thing happens according to the laws of nature other than which there is no fate The decrees of fate lie in the laws by which all motion is ever linked together and a new motion ever springs from another in a fixed order If man by his power free choice can make some commencement of motion to break through the decrees

of fate in order that cause follow not cause from the celestial it is because in the atoms of his makeup there is another cause of motions caused by a minute surviving of first beginnings at no fixed part of space and no fixed time

Nevertheless according to Augustine Lucretius is a fatalist who disbelieves in Providence other than which there is no fate Each of them uses the word fate the one to deny the other to affirm the power of God

But even if a Christian avoids the superstitions of astrology or some similar belief in a natural necessity which does not depend on God he may still commit the sin of fatalism which follows from the denial of man's free will Understanding fate as identical with Providence the Christian is a fatalist if in the belief that every human act is foreordained by God he resigns himself to his fate making no moral effort and taking no moral responsibility for his soul's welfare To do that is to argue like Chaucer's Troilus

I am he and but do as far as to say  
For all that comes comes by necessity  
This to be done for is my destiny  
I must believe and cannot other choose  
That Providence in its course for sight  
Hath known that Cressida I once must lose  
Since God sees everything from heaven's height  
And plans things as he thinks both best and right  
As was arranged for by predestination

Troilus sees no way of avoiding the conclusion that free choice is an idle dream

THE THEOLOGIANS recognize the difficulty of reconciling Providence and free will The truth must lie somewhere between two heresies If it is heresy to deny God's omnipotence and omniscience then nothing remains outside the all encompassing scope of divine Providence nothing happens contrary to the divine will no future contingency is or can be unforeseen by God If on the other hand to deny that mansins freely means that God must be responsible for the evil that man does then it is a heresy to deny free will for that imputes evil to God

This is the problem with which Milton deals in *Puritan Lost* announcing that he will try to justify the ways of God to man In a cor creation in heaven the Father tells the

and contingency can be explained without any reference to the supernatural as is evident from the discussion of these matters in the chapter on *Cause*. But fate and fortune in their origin at least are theological terms.

In ancient poetry and mythology both inevitability and chance were personified as deities or supernatural forces. There were the goddess of Fortune and the three Fates as well as their three evil sisters or counterparts the Furies. The Latin word from which fate comes means an oracle and so signifies what is divinely ordained. What happens by fate is *fated*—something destined and decreed in the councils of the gods on Olympus or it may be the decision of Zeus to whose rule all the other divinities are subject or as we shall see presently it may be a supernatural destiny which even Zeus cannot set aside.

In any case the notion of fate implies a supernatural will even as destiny implies predestination by an intelligence able not only to plan the future but also to carry out that plan. The inevitability of fate and destiny is thus distinguished from that of merely natural necessity which determines the future only insofar as it may be the inevitable consequence of causes working naturally.

But the ancients do not seem to be fatalists in the extreme sense of the term. To the extent that men can propitiate the gods or provoke divine jealousy and anger the attitudes and deeds of men seem to be a determining factor in the actions of the gods. To the extent that the gods align themselves on opposite sides of a human conflict (as in the *Iliad*) or oppose each other (as in the *Odyssey*) it may be thought that what happens on earth merely reflects the shifting balance of power among the gods.

But human planning and willing do not seem to be excluded by the divine will and plan which are forged out of the quarrels of the gods. On the contrary polytheism seems to make fortune itself contingent on the outcome of the Olympian conflict and so permits men a certain latitude of self-determination. Men can struggle against the gods precisely because the gods may be with them as well as against them.

The ultimate power of Zeus to decide the issue may however place the accent on fate

rather than on freedom. This is certainly so if Zeus is not the master of even his own life much less the omnipotent ruler among the gods or the arbiter of human destiny. In *Prometheus Bound* the Chorus asks Who is the pilot of Necessity? Prometheus answers,

The Fates transform and the unforgetful Furies. The Chorus then asks Is Zeus of lesser might than these? To which Prometheus replies He shall not shun the lot appointed. When they ask what this doom is Prometheus tells them to inquire no more for they verge on mysteries. Later Zeus himself sends Hermes to wrest from Prometheus the secret of what has been ordained for him by all consummating Fate or Fate's relentless law. Prometheus refuses saying that none shall bend my will or force me to disclose by whom tis fated he shall fall from power.

The question Aeschylus leaves unanswered is whether Zeus would be able to escape his doom if he could foresee what Fate holds in store for him. The suggestion seems to be that without omniscience the omnipotence of Zeus cannot break the chains of Fate.

IN THE TRADITION of Judaco-Christian theology the problem of fate is in part verbal and in part real. The verbal aspect of the problem concerns the meaning of the word fate in relation to the divine will, providence and predestination. With the verbal matter settled there remains the real problem of God's will and human freedom. The strictly monotheistic conception of an omnipotent and omniscient God deepens the mystery and makes it more difficult than the problem of fate and freedom in pagan thought.

If anyone calls the will or the power of God himself by the name of fate Augustine says let him keep his opinion but correct his language. For when men hear that word according to the ordinary use of language they simply understand by it the virtue of that particular power of the stars which may exist at the time when anyone is born or conceived which some separate altogether from the will of God whilst others affirm that this also is dependent on that will. But those who are of the opinion that apart from the will of God the stars determine what we shall do or what

and contingency can be explained without any reference to the supernatural as is evident from the discussion of these matters in the chapter on CHANCE. But fate and fortune in their origin at least are theological terms.

In ancient poetry and mythology both in inevitability and chance were personified as deities or supernatural forces. There were the goddess of Fortune and the three Fates as well as their three evil sisters or counterparts the Furies. The Latin word from which fate comes means an oracle and so signifies what is divinely ordained. What happens by fate is *fated*—something destined and decreed in the councils of the gods on Olympus or it may be the decision of Zeus to whose rule all the other divinities are subject or as we shall see presently it may be a supernatural destiny which even Zeus cannot set aside.

In any case the notion of fate implies a supernatural will even as destiny implies predestination by an intelligence able not only to plan the future but also to carry out that plan. The inevitability of fate and destiny is thus distinguished from that of merely natural necessity which determines the future only *insofar* as it may be the inevitable consequence of causes working naturally.

But the ancients do not seem to be fatalists in the extreme sense of the term. To the extent that men can propitiate the gods or provoke divine jealousy and anger the attitudes and deeds of men seem to be a determining factor in the actions of the gods. To the extent that the gods align themselves on opposite sides of a human conflict (as in the *Iliad*) or oppose each other (as in the *Odyssey*) it may be thought that what happens on earth merely reflects the shifting balance of power among the gods.

But human planning and willing do not seem to be excluded by the divine will and plan which are forged out of the quarrels of the gods. On the contrary polytheism seems to make fortune itself contingent on the outcome of the Olympian conflict and so permits men a certain latitude of self determination. Men can struggle against the gods precisely because the gods may be with them as well as against them.

The ultimate power of Zeus to decide the issue may however accent on fate

rather than on freedom. This is certainly so if Zeus is not the master of even his own fate much less the omnipotent ruler among the gods or the arbiter of human destiny. In *Prometheus Bound* the Chorus asks, Who is the pilot of Necessity? Prometheus answers

The Fates transform and the unforgetting Furies. The Chorus then asks Is Zeus of lesser might than these? To which Prometheus replies He shall not shun the lot appointed. When they ask what this doom is Prometheus tells them to inquire no more for they verge on mysteries. Later Zeus himself sends Hermes to wrest from Prometheus the secret of what has been ordained for him by all consummating Fate or Fate's resistless law. Prometheus refuses saying that none shall bend my will or force me to disclose by whom tis fated he shall fall from power.

The question Aeschylus leaves unanswered is whether Zeus would be able to escape his doom if he could foresee what Fate holds in store for him. The suggestion seems to be that without omniscience the omnipotence of Zeus cannot break the chains of Fate.

**IN THE TRADITION** of Judaeo Christian theology the problem of fate is in part verbal and in part real. The verbal aspect of the problem concerns the meaning of the word fate in relation to the divine will, providence and predestination. With the verbal matter settled there remains the real problem of God's will and human freedom. The strictly monotheistic conception of an omnipotent and omniscient God deepens the mystery and makes it more difficult than the problem of fate and freedom in pagan thought.

If anyone calls the will or the power of God itself by the name of fate Augustine says let him keep his opinion but correct his language. For when men hear that word according to the ordinary use of language they simply understand by it the virtue of that particular position of the stars which may exist at the time when any one is born or conceived which some separate altogether from the will of God whilst others affirm that this also is dependent on that will. But those who are of the opinion that apart from the will of God the stars determine what we shall do or what

good things we shall possess or what evils we shall suffer must be refused a hearing by all not only by those who hold the true religion but by those who wish to be the worshippers of any gods whatsoever even false gods For what does this opinion really amount to but this that no god whatever is to be worshipped or prayed to?

Since the word fate has been used for those things which are determined apart from the will of God or man Augustine thinks it would be better for Christians not to use it but to substitute Providence or predestination when they wish to refer to what God wills Aquinas however retains the word fate but restricts its meaning to the ordering of mediate causes by which God wills the production of certain effects.

According to the definition given by Boethius which Aquinas quotes Fate is a disposition inherent to changeable things by which Providence connects each one with its proper order Thus fate is not identified with Providence but made subordinate to it The distinction Aquinas explains depends on the way we consider the ordering of effects by God As being in God Himself the ordering of the effects is called Providence But as being in the mediate causes ordered by God it is called fate While admitting that the divine power or will can be called fate as being the cause of fate he declares that essentially fate is the very disposition or *series se* order of second causes.

The position Lucretius takes seems to be exactly opposite to that of Augustine and Aquinas Lucretius condemns the fatalism of those who believe that the gods control the order of nature and who therefore attribute whatever befall them to divine ordination For him nature free at once and rid of her haughty lords is seen to do all things spontaneously by herself without the meddling of the gods He tries to teach men that everything happens according to the laws of nature other than which there is no fate The decrees of fate lie in the laws by which all motion is ever linked together and a new motion ever springs from another in a fixed order If man by his power of free action can make some commencement of motion to break through the decrees

of fate in order that cause follow not cause from everlasting it is because in the atoms of his makeup there is another cause of motion caused by a minute swerving of first beginnings at no fixed part of space and no fixed time

Nevertheless according to Augustine Lucretius is a fatalist who disbelieves in Providence other than which there is no fate Each of them uses the word fate the one to deny the other to affirm the power of God

But even if a Christian avoids the superstitions of astrology or some similar belief in a natural necessity which does not depend on God he may still commit the sin of fatalism which follows from the denial of man's free will Understanding fate as identical with Providence the Christian is a fatalist if in the belief that every human act is foreordained by God he resigns himself to his fate making no moral effort and taking no moral responsibility for his soul's welfare To do that is to argue like Chaucer's Troilus

I am he said but done for so to say  
For ill that comes comes by necessary  
Thou to be done if it is my destay  
I am I belie ve and cannot other choose  
This Providence in its divine forces has  
Hath known that Cressida I once must lose  
Since God sees every thing from heaven's height  
And plans things as he thinks both best and right  
As it is arranged for by predestinay

Troilus sees no way of avoiding the conclusion that free choice is an idle dream

THE THEOLOGIANS recognize the difficulty of reconciling Providence and free will The truth must lie somewhere between two heresies If it is heresy to deny God's omnipotence and omniscience then nothing remains outside the all encompassing scope of divine providence nothing happens contrary to the divine will no future contingency is or can be unforeseen by God If on the other hand to deny that mans freest means that God must be responsible for the evil that man does then it is a heresy to deny free will for that imputes evil to God

This is the problem with which Milton deals in *Paradise Lost* announcing that he will try to justify the ways of God to man In a conversation in heaven the Father tells the

Son that though He knows Adam will disobey his rule Adam remains quite free to sin or not to sin and the fault is his own just as the rebellious angels acted on their own free will The angels God says

So were created nor can justly accuse  
Thir maker or thir making or thir Fate  
As if Predestination overruled  
Thir will dispos'd by absolute Decree  
Or high foreknowledge they themselves decreed  
Thir own revolt not I if I foreknew v  
Foreknowledge had no influence on their fault  
Which had no less prov'd certain unforeknow'n  
So without least impulse or shadow of Fate  
Or ought by me immutable foreseen  
They trespass Authors to themselves in all  
Both what they judge and what they choose for so  
I formed them free and free they must remain  
Till they enthrall themselves Else must change  
Thir nature and revoke the high Decree  
Unchangeable Eternal which ordain'd  
Thir freedom they themselves ordain'd their fall

A solution of the problem is sometimes developed from the distinction between God's foreknowledge and God's foreordination. God foreordained the freedom of man but only foreknew his fall. man ordained that himself. Strictly speaking however the word foreknowledge would seem to carry a false connotation since nothing is future to God. Every thing that has ever happened or ever will is simultaneously together in the eternal present of the divine vision.

During his ascent through Paradise Dante wishing to learn about his immediate future asks his ancestor Cacciaguida to foretell his fortune for he gazing upon the Point to which all times are present can see contingent things ere in themselves they are. Cacciaguida prefaces his prediction of Dante's exile from Florence by telling him that the contingency of material things is all depicted in the Eternal Vision yet thence it does not take necessity more than does a ship which is going down the stream from the eye in which it is mirrored. The difference between time and eternity is conceived as permitting the temporal future to be contingent even though God knows its content with certitude.

But it may still be asked does not God's knowledge imply the absolute predestination of future events by providence since what God knows with certitude cannot happen otherwise

than as He knows it? In a discussion of divine grace and man's free will Dr Johnson remarks,

I can judge with great probability how a man will act in any case without his being restrained by my judging. God may have this probability increased to certainty. To which Boswell replies that when it is increased to certainty freedom ceases because that cannot be certainly foreknown which is not certain at the time but if it be certain at the time it is a contradiction to maintain that there can be afterwards any contingency dependent upon the exercise of will or anything else.

Against such difficulties Aquinas insists that divine providence is compatible not only with natural necessity but also with contingency in nature and free will in human acts. Providence he writes has prepared for some things necessary causes so that they happen of necessity for others contingent causes that they may happen by contingency. Human liberty does not imply that the will's acts are not caused by God who being the first cause moves causes both natural and voluntary. Just as by moving natural causes He does not prevent their acts being natural so by moving voluntary causes He does not deprive their actions of being voluntary. God causes man to choose freely and freely to execute his choice.

The uncompromising conception of fate is that which leaves no place for chance or freedom anywhere in the universe neither in the acts of God nor in the order of nature nor in the course of history. The doctrine of absolute determinism whether in theology science or history is thus fatalism unqualified.

The ancient historians are not fatalists in this sense. Herodotus for example finds much that can be explained by the contingencies of fortune or by the choices of men. The crucial decision for example in the defense of Athens is presented as an act of man's choice. Upon receiving the prophecy that safe shall the wooden wall continue for thee and thy children the Athenians exercise their freedom by disagreeing about its meaning. Certain of the old men Herodotus writes were of the opinion that the god meant to tell them the citadel would escape for this was inciently defended by a palisade. Others maintained

that the fact was what the god pointed at and their advice was that nothing should be thou he of except the ships. The eloquence of Themis indeed carried the latter view. To stress its importance the historian observes that the war in of Greece lay in the decision that led Athens to "become a maritime power."

In *Perseus*, a comparable decision by the Persians, Hrodgar seems to be consistent, their fatalism with the freedom of the Greeks. At first Veres accepts the council of Artabanus not to go to war against the Greeks. But after a series of visions, which appear to both the king and his counsellor that decision is reversed for according to the dream the war "is fated to happen."

The conception of fate and freedom in the *Perseus* seems closer to the Greek than to the Persian view. Even though the emanation of his own which will come with the founding of the Roman empire is projected as a divinely appointed destiny, the hero who brings that great event to pass acts as if he were free to accept or evade his responsibilities.

The Christian understanding of historical destiny in terms of providence persists—more than that requires—men to exercise free choice at every turn. The cause of the greatness of the Roman empire writes Augustine is neither fortuitous nor fatal according to the judgment or opinion of those who call those things *fato*; which either have no cause or such causes as do not proceed from some intelligible order and those things *fatu* which happen independently of the will of God and man by the necessity of a certain order. Human kingdoms are established by divine Providence. The fatalism which New wine here condemns is not independence nor lack of the will of God but of man's will also.

It is only in modern times with Hegel and Marx that necessity reigns supreme in the philosophy of history. Hegel spurns the notion that history is a superficial play of causal called merely human thoughts and passions. He also condemns those who speak of Providence and the plan of Providence in a way that is empty of ideas since for them the plan of Providence is inscrutable and incomprehensible. For Hegel history is the necessary development out of the concept of the

mind's freedom alone. But this development and this freedom are entirely matters of necessity as far as individuals and their works are concerned. They are all the time the unconscious tools and organs of the world mind at work within them.

For Marx history seems likewise to have the same necessity. He deals with individuals, he writes in the preface to *Capital* only in so far as they are the personifications of economic categories, embodiments of particular class relations and class interests. His stand point he says, is one from which the evolution of the economic formation of society is viewed as a process of natural history and within which the individual cannot be responsible for relations whose creature he socially remains, however much he may subjectively raise himself above them. He re it is a question only of these laws themselves, of these tendencies working with iron necessity towards inevitable results.

According to the historical determinism of Hegel and Marx which is further considered in the chapter on History men play a part which is already written for them in the scroll of history. Human liberty apparently depends on man's knowledge of and acquiescence in the unfolding necessities.

**HISTORICAL DETERMINISM** is merely a part of the doctrine of a causal necessity which governs all things. Causality seems to be understood by moderns like Spinoza, Hume and Freud as excluding the possibility of chance or free will. Among the ancients, Plotinus alone seems to go as far as Spinoza in affirming the universal reign of natural necessity. What Spinoza says of God or Nature Plotinus says of the All One namely that for the first principle which is the cause of everything else freedom consists in being, *cause sui* or cause of itself—i.e. determined rather than determined by external causes.

God does not act from freedom of the will Spinoza writes. Yet God alone is a free cause for God alone exists and acts from the necessity of his own nature. As for everything else in the universe Spinoza maintains that there is nothing contingent but all things are determined from the necessity of the divine

nature to exist and act in a certain manner. This applies to man who according to Spinoza, does everything by the will of God alone.

From quite different premises Hume seems to reach much the same conclusion concerning chance and liberty. Chance, he writes, when strictly examined is a mere negative word and means not any real power which has anywhere a being in nature. But he also thinks that liberty, when opposed to necessity, not to constraint, is the same thing with chance.

Hume embraces the consequences of such a position. If voluntary action be subjected to the same laws of necessity with the operations of matter there is a continued chain of necessary causes pre ordained and pre determined reaching from the original cause of all to every single volition of every human creature. No contingency anywhere in the universe, no indifference, no liberty.

When confronted with the objection that it then becomes impossible to explain distinctly how the Deity can be the mediate cause of all the actions of men without being the author of sin and moral turpitude, Hume replies that these are mysteries which natural and unassisted reason is very unfit to handle. To defend absolute decrees and yet free the Deity from being the author of sin has been found hitherto to exceed all the power of philosophy.

Unlike Spinoza and Hume Freud does not deal with the theological implications or pre-suppositions of determinism. For him determinism is an essential postulate of science and even to some extent a scientifically discoverable fact. The deeply rooted belief in psychic free

dom and choice, he writes, is quite unsatisfactory and it must give ground before the claims of a determinism which governs even mental life. He thinks it can be shown on the basis of clinical experience that every psychic association will be strictly determined by important inner attitudes of mind which are unknown to us at the moment when they operate just as much unknown as are the disturbing tendencies which cause errors and those tendencies which bring about so called chance actions.

The fatalism of what is often called scientific determinism is that of blind necessity. It not only eliminates liberty and chance but also purpose and the operation of final causes. Every future event in nature, history, or human behavior is completely predetermined by efficient causes—predetermined but not predestined for there is no guiding intelligence at work, no purpose to be fulfilled. The system of *fatality*, of which Spinoza is the accredited author, Kant writes, is one which eliminates all trace of design and leaves the original ground of the things of nature divested of all intelligence.

Whether such complete fatalism is the only doctrine compatible with the principles and findings of natural science has been questioned by philosophers like William James. It is certainly not the only doctrine compatible with the view that nothing happens without a cause. As the chapters on CHANCE and WILL show, ancient and mediaeval thinkers who affirm contingency in nature or freedom in human acts do so without denying the universal reign of causation.

### OUTLINE OF TOPICS

1 The decrees of fate and the decisions of the gods	P. 68
- The fated or inevitable in human life	51
2 The antitheses of fate fortune natural necessity chance or contingency	522
3 Fatalism in relation to the will of God the doctrine of predestination	523
4 The secularization of fate scientific or philosophical determinism	
5 The historian's recognition of fate the destiny of cities nations empires	
6 The historian's recognition of fate the destiny of cities nations empires	524

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II [26, 283] 12d the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTION** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page; the letters c and d to the upper and lower halves of the right hand side of the page. e.g. in 7 PLATO *Symposium* 163b 164, the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**ARTICLES** One or more of the main divisions of a work (such as PART BK CHS CT) are sometimes cited in the reference line numbers, in brackets are given in certain cases, e.g. *Iliad* K II [265, 283] 12d.

**BIBLIOGRAPHY** The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows, e.g. OLD TEST & 1 Nehemiah 7:45—(D) II Esdr 7:46.

**SYNOPSIS** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference, passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanations of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

## Chapter 28 FORM

### INTRODUCTION

THE great philosophical issues concerning form and matter have never been resolved. But the terms in which these issues were stated from their first formulation in antiquity to the 17th or 18th centuries have disappeared or at least do not have general currency in contemporary discourse. Kant is perhaps the last great philosopher to include these terms in his basic vocabulary. The conceptions of matter and form he writes lie at the foundation of all other reflection so inseparably are they connected with every mode of exercising the understanding. The former denotes the determinable in general, the second its determination.

The word *form* is no longer a pivotal term in the analysis of change or motion nor in the distinction between being and becoming nor in the consideration of the modes of being and the conditions of knowledge. The word *matter* is now used without reference to *form* where earlier in the tradition all of its principal meanings involved *form* as a correlative or an opposite. Other words such as participation and imitation have also fallen into disuse or lost the meanings which derived from their relation to *form* and *matter*.

The problems which these words were used to state and discuss remain active in contemporary thought. There is for instance the problem of the universal and the particular, the problem of the immutable and the mutable, the problem of the one and the many or of sameness and diversity. These problems appear in the writings of William James and Bergson, Dewey and Santayana, Whitehead and Russell. Sometimes there is even a verbal approximation to the traditional formulation as in Whitehead's doctrine of eternal objects or in Santayana's consideration of the realm of essence and the realm of matter. Whatever expressions they use these thinkers find themselves

opposed on issues which represent part if not the whole of the great traditional controversy between Plato and Aristotle concerning *form*.

THERE IS A TENDENCY AMONG the historians of thought to use the names of Plato and Aristotle to symbolize a basic opposition in philosophical perspectives and methods or even in what William James calls intellectual temperaments. Later writers are called Platonists or Aristotelians and doctrines or theories are classified as Platonic or Aristotelian. It almost seems to be assumed at times that these names exhaust the typical possibilities that minds or theories must be one or the other or some sort of mixture or confusion of the two.

If this tendency is ever justified it seems to be warranted with regard to the problems of *form*. Here if anywhere there may be poetic truth in Whitehead's remark that the history of western thought can be read as a series of footnotes to Plato though perhaps the observation should be added that Aristotle the first to comment on Plato wrote many of the principal footnotes. In Plotinus the two strains seem to be intermingled. The issue between Plato and Aristotle concerning *form* dominates the great metaphysical and theological controversies of the later Middle Ages and with some alterations in language and thought it appears in the writings of Hobbes, Bacon, Descartes, Spinoza and Locke where it is partly a continuation of and partly a reaction against the mediaeval versions of Platonic and Aristotelian doctrine.

The most extreme reaction is of course to be found in those who completely reject the term *form* or its equivalents as being without significance for the problems of motion, existence or knowledge. Bacon retains the term but radically changes its meaning. None should

suppose from the great part assigned by us to forms. Bacon writes, "that we mean such forms as the meditations and thoughts of men have hitherto been accustomed to. He does not mean either the concrete forms or any abstract forms of ideas but rather the laws and regulations of simple action. The form of heat or form of light therefore means no more than the law of heat or the law of light. But Hobbes and Locke tend to reject the term itself—especially when it occurs in the notion of substantial form—as meaningless or misleading.

"We are told" says Hobbes, there be in the world certain essences, separated from bodies which they call *abstr ete sences and substantia l forms*. Being once fallen into this error of separated essences [men] are thereby necessarily involved in many other absurdities that follow it. For seeing they will have these forms to be real, they are obliged to assign them some place which they cannot succeed in doing according to Hobbes, because they hold them incorporeal, without all dimension of quantity and all men know that place is dimension and not to be filled but by that which is corporeal.

With regard to *substantial form* Locke declares, I confess I have no idea at all but only of the sound form. Those who have been taught that it was those forms which made the distinction of substances into the true species and genera were led yet further out of the way by having their minds set upon fruitless inquiries after substantial forms—a subject which Locke regard as wholly unintelligible. The general scepticism about this notion (or the distrust of its hollowness) in the 17th and 18th centuries is reflected in a bantering remark by Tristram Shandy's father. In a discussion of infant prodigies, he refers to some boy wonders who left off their substantial forms at nine years old or soone and went on reasoning without them.

Since form and matter are supposed to be correlative the denial to form of meaning or reality lead to materialism as in the case of Hobbes—the affirmation of matter alone as a principle or cause. Materialists of one sort or another are the opponents of both Plato and Aristotle and of Platonists and Aristotelians. That part of the controversy is discussed in the

chapter on MATTER. Here we are concerned with the issues arising from different views of form and its relation to matter.

THE POPULAR meaning of form affords an approach to the subtleties of the subject. As ordinarily used form connotes figure or shape. That connotation expresses one aspect of the technical significance of form. A great variety of things, differing materially and in other respects can have the same figure or shape. The same form can be embodied in an indefinite number of otherwise different individuals. But figures or shapes are sensible forms, forms perceptible to vision and touch. To identify form with figure or shape would put an improper limitation on the meaning of form. This is popularly recognized in the consideration of the form of a work of art—the structure of an epic poem or a symphony—which seem to be more a matter of understanding than of direct sense-perception.

Bertrand Russell's definition of the form of a proposition effectively illustrates the point in view. The form of a proposition, he says, is that which remains the same in a statement when everything else is changed. For example these two statements have the same grammatical and logical form (1) John followed James and (2) Paul accompanied Peter. What might be called the matter or subject matter of the two statements is completely different but both have the same form, as may an indefinite number of other statements.

This illustration helps us to grasp the meaning of form and the distinction between form and matter or the formal and the material aspects of anything. It is thus that we understand the phrase formal logic to signify a study of the forms of thought or discourse separated from the subject matter being thought about or discussed. Similarly abstractionism or surrealism is a kind of formalism in painting which tries to separate visible patterns or structures from their representative significance or their reference to familiar objects.

Kant's doctrine of space and time as transcendental forms of intuition exemplifies the meaning of form as pure order or structure divorced from sensuous content. That which in the phenomenon corresponds to the sensation

## *Chapter 28 FORM*

### *INTRODUCTION*

THE great philosophical issues concerning form and matter have never been resolved. But the terms in which these issues were stated from their first formulation in antiquity to the 17th or 18th centuries have disappeared or at least do not have general currency in contemporary discourse. Kant is perhaps the last great philosopher to include these terms in his basic vocabulary. The conceptions of matter and form he writes lie at the foundation of all other reflection so inseparably are they connected with every mode of exercising the understanding. The former denotes the determinable in general the second its determination.

The word *form* is no longer a pivotal term in the analysis of change or motion nor in the distinction between being and becoming nor in the consideration of the modes of being and the conditions of knowledge. The word *matter* is now used without reference to *form* where earlier in the tradition all of its principal meanings involved *form* as a correlative or an opposite. Other words such as participation and imitation have also fallen into disuse or lost the meanings which derived from their relation to *form* and *matter*.

The problems which these words were used to state and discuss remain active in contemporary thought. There is for instance the problem of the universal and the particular the problem of the immutable and the mutable the problem of the one and the many or of sameness and diversity. These problems appear in the writings of William James and Bergson Dewey and Santayana Whitehead and Russell. Sometimes there is even a verbal approximation to the traditional formulation as in Whitehead's doctrine of eternal objects or in Santayana's consideration of the realm of essence and the realm of matter. Whatever expressions they use these thinkers find themselves

opposed on issues which represent part if not the whole of the great traditional controversy between Plato and Aristotle concerning form.

THERE IS A TENDENCY AMONG the historians of thought to use the names of Plato and Aristotle to symbolize a basic opposition in philosophical perspectives and methods or even in what William James calls "intellectual temperaments". Later writers are called Platonists or Aristotelians and doctrines or theories are classified as Platonic or Aristotelian. It almost seems to be assumed at times that these names exhaust the typical possibilities that minds or theories must be one or the other or some sort of mixture or confusion of the two.

If this tendency is ever justified it seems to be warranted with regard to the problems of form. Here if anywhere there may be poetic truth in Whitehead's remark that the history of western thought can be read as a series of footnotes to Plato though perhaps the observation should be added that Aristotle the first to comment on Plato wrote many of the principal footnotes. In Plotinus the two strains seem to be intermingled. The issue between Plato and Aristotle concerning form dominates the great metaphysical and theological controversies of the later Middle Ages and with some alterations in language and thought it appears in the writings of Hobbes Bacon Descartes Spinoza and Locke where it is partly a continuation of and partly a reaction against the mediaeval versions of Platonic and Aristotelian doctrine.

The most extreme reaction is of course to be found in those who completely reject the term *form* or its equivalents as being without significance for the problems of motion existence or knowledge. Bacon retains the term but radically changes its meaning. None should

we regard the idea we have (that is, our understanding, of the thing) as an approximation of the Idea. The Ideas are outside the human mind even as the Forms are separate from their sensible material imitations. When we apprehend them by reason we know the Forms they imitate when we apprehend them by our senses we know them as imitations or as images of the Ideas.

THE PLATONIC THEORY changes the ordinary meaning of the word imitation. We ordinarily think of imitation as involving a relation of resemblance between two sensible things both of which we are able to perceive. For example we say that a child imitates his father's manner or that a portrait resembles the person who posed for it. The painter according to Socrates in the *Republic* is not the only creator of appearances." He compares the painter who pictures a bed with the carpenter who makes one.

Like the bed in the painting the bed made by the carpenter is not the real bed. It is not says Socrates, the Idea "which according to our view is the essence of the bed. The carpenter can not make true existence but only some semblance of existence. As the bed in the picture is an imitation of the particular bed made by the carpenter so the latter is an imitation of the Idea—the essential *Aes* or *essence* which is the model or archetype of all particular beds.

Shifting to another example we can say that a statue which resembles a particular man, is the imitation of an imitation for the primary imitation lies in the resemblance between the particular man portrayed and the Form or Idea Man. Just as the statue derives its distinctive character from the particular man it imitates, so that particular man, or any other, derives his manhood or humanity from Man. Just as the particular man imitates Man so our idea of Man is also an imitation of that Idea. Knowledge according to Plato, consists in the imitation of Ideas, even as sensible material things bear whatever being they have by imitation of the un-*being*, the Forms.

Another name for the primary type of imitation is participation. To participate in is to partake of. In the dialogue in which Plato has the young Socrates inquire into the relation

between sensible particulars and the Ideas or Forms, Parmenides tells him that there are certain ideas of which all other things partake and from which they derive their names that similars, for example become similar because they partake of similarity; and great things become great because they partake of greatness and that just and beautiful things become just and beautiful because they partake of justice and beauty. The Forms or Ideas are Parmenides suggests, patterns fixed in nature and other things are like them and resemblances of them—what is meant by the participation of other things in the Ideas, is really assimilation to them.

The fact of particularity and multiplicity seems to be inseparable from the fact of participation. That in which the many particulars participate must on the other hand have universality and unity. The Forms or Ideas are universals in the sense that each is a one which is somehow capable of being in a many—by resemblance or participation. Parmenides asks Socrates whether he thinks that the whole idea is one and yet being one is in each one of the many. When Socrates unhesitatingly says Yes, Parmenides points out to him that we then confront the difficulty that one and the same thing will exist as a whole at the same time in many separate individuals and that the ideas themselves will be divisible, and things which participate in them will have a part of them only and not the whole idea existing in each of them. Nor can we say Socrates is made to realize that the one idea is really divisible and yet remains one."

THIS DIFFICULTY concerning the relation of particulars to the Ideas they participate in, is discussed in the chapter on UNIVERSAL AND PARTICULAR. It is not the only difficulty which Plato himself finds in the theory of Ideas. Another concerns the individuality of each of the indefinite number of particulars which copy a single model or archetype. What makes the various copies of the same model different from one another?

Plato meets this problem by adding a third principle. To the intelligible patterns or archetypes and their sensible imitations, he adds, in the *Timaeus* the principle which is variously

I term its *matter* he writes, that which effects that the content of the phenomenon can be arranged under certain relations I call its *form*. Sometimes the consideration of form emphasizes not its separation from but its union with matter. The form dwells in the thing constituting its nature. The sensible or intelligible characteristics of a thing result from the various ways in which its matter has been formed.

It is impossible to say more about the meaning of *form* without facing at once the great controversy between Plato and Aristotle and the difficulties which their theories confront.

**PLATO** does not deny that things—the sensible material changing things of experience—have something like form. Nor does he deny that the ideas by which we understand the natures of things are like forms. Rather he asks us to consider that which they are like.

In the *Phaedo*—only one of the many dialogues in which the doctrine of forms is discussed—Socrates argues that there is such a thing as equality not of one piece of wood or stone with another but that, over and above this there is absolute equality. Socrates gets Simmias to admit that we know the nature of this absolute essence and then asks Whence did we obtain our knowledge? It could not have been obtained from the pieces of wood or stone. Socrates tries to show because they appear at one time equal and at another time unequal whereas the idea of equality is never the same as that of inequality. Hence he thinks

we must have known equality previously to the time when we first saw the material equals. Before we began to see or hear or perceive in any way we must have had a knowledge of absolute equality, or we could not have referred to that standard the equals which are derived from the senses. The equality which supplies the standard by which material equals are measured is the Form or Idea of equality.

What is true in this one case Socrates thinks is true in every other. Whether we consider the essence of equality, beauty or anything else Socrates holds the Id as or essences else which in the dialectical process we define as true existences are each of them always

what they are having the same simple self-existent and unchanging forms not admitting of variation at all or in any way or at any time. Apart from the perishable things of the sensible world and apart from the ideas which are involved in our process of learning and thinking there exist the Forms or the Ideas themselves—the immutable objects of our highest knowledge.

Because the same English words are employed in these quite distinct senses it is useful to follow the convention of translators who capitalize the initial letter when Form or Idea refers to that which is separate from the characteristics of material things and from the ideas in our mind. The words Form and Idea are interchangeable but the words Idea and idea are not. The latter refers to a notion in the human mind by which it knows whereas Idea—as Plato uses the word—signifies the object of knowledge *i.e.* that which is known. These differences are further discussed in the chapter on IDEA.

By imitating the Forms sensible things according to Plato have the characteristics we apprehend in them. The ideas we have when we apprehend the resemblance between sensible things and their Forms (which sensible things exhibit) would seem to be indirect apprehensions of the Forms themselves. When in the *Republic* Socrates discusses knowledge and opinion he distinguishes them from one another according to a division of their objects—the realm of intelligible being on the one hand and the realm of sensible becoming on the other. The latter stands to the former as image or copy to reality and Socrates finds this relationship repeating itself when he further divides each of the two parts. The realm of becoming divides into images or shadows and into that of which this is only the resemblance namely the animals which we see and everything that grows or is made. The realm of intelligible being he also subdivides into two parts of which the first is as an image or reflection of the second namely the hypotheses we form in our minds and the Ideas or Forms themselves.

From this it appears that just as we should regard the form of the thing as an imitation of or participation in the separate Form so should

only physical things—similar words like "stone," such as this one the tree or the man—*are* not in his opinion, instances of or particularities in material things which exist apart from them. He leaves it as open question whether there are individual Forms or Ideas—that is, particular "substances"—which do not function as the models for *material* things to copy.

He goes through the trees of Lin theory according to two standards. The first is that the characteristics of things are determined by "individual forms" which have their being, no matter from but in the things themselves. To *Carry* his analogy he turns to the realm of art. When we see a brass object, he writes, "we have the form," which is a "form" "in the particular matter" "the base and the tree is a brass object." There is no "substance" from the individual "substances," and no brass apart from the particular lump of metal the *one* brass. The term means the *whole*, and is not a *part*—a *definite thing*, such as the individual brass object.

He looks at other natural things in the same manner. It is from "the individual form and the matter" that he says that "the concrete substance is determined." Men such as Callas or Socrates, for example, consist of "such and such a form in this flesh and in these bones," and they are different in virtue of their matter (one that is different) but the same in form. The flesh and bones of Callas are not the flesh and bones of Socrates but though diff. mat. as well as form, they are the same as men because they have the same form.

The second point is that our understanding of *things* gives the forms of things, but now somehow in the *mind*. Let rather than in the things themselves. In order to know them, therefore, we must have within us "either the *things* themselves or their forms. The former alternative is of course impossible; it is not the *thing* which is present in the *soul*," he continues, "but its form."

The form in the *thing* is as individual as the *thing* itself. But in the *mind* as the result of the *soul's* power to "infect" the forms from its own, the form becomes a universal; it is then called by Aristotle an "idea," "a notion," or "concept." Forms are universal in the mind

alone. If there were a form existing apart from both matter and mind, it would be neither an individual form nor an abstract universal.

The individual forms according to him are not universal. Except for the possibility of Forms which dwell apart and bear no relation to all to *them*, there all forms are either in matter or are created from matter in the human mind. These are of course called "material forms" because they are the forms which matter takes or can take and which the mind also takes from the *matter*. Their being consists in informing or determining matter just as the being of matter consists in the capacity to receive these forms and to be determined by them.

The foregoing belongs to earlier the *old* sense of the word "composit" as a synonym for "substance" when *b* is considered part of the substance. The individual *earlier* individual physical things which Lin calls "substances" are all composed of form and matter *per se*. He sometimes also calls form and matter "*a* *per se*," but when he uses the word "substance" strictly and in its primary sense he applies it only to the concrete individual Form and matter are only *principles* or *constituents* of the concrete thing—the concrete substance.

The *union* of form and matter to constitute physical substances also erases the Aristotelian differentiation of form with a reality and of matter with potentiality and the union of form and matter to a third term in the analysis of change, namely *accident*. As a physical thing changes, its matter remains as pure form total, or and but its matter thus represents its capacity or potentiality for form. Matter is the *formless* aspect of change, the *thing*. What things are accidents? This moment is due to the forms they possess. But they may have the potentialities for assuming other forms, with respect to which they are in process.

"The *universality* of certain things," Augustus writes, "is simply their capacity for all the forms into which material things can be changed." Change occurs in a *mass* *of* *matter* which has another way of saying that it consists in the *actualization* of a thing's potentialities. The *Aristo-Lin* theory of form and matter is a theory of becoming as well as an

named sometimes the receptacle sometimes space sometimes matter However named it is the absolutely formless for that which is to receive all Forms should have no form The mother and receptacle of all visible and in any way sensible things is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible and is most incomprehensible

It is this material or receiving principle which somehow accounts for the numerical plurality and the particularization of the many copies of the one absolute model When a number of replicas of the same pattern are produced by impressing a die on a sheet of plastic material at different places it is the difference in the material at the several places which accounts for the plurality and particularity of the replicas Yet the one die is responsible for the character common to them all

The sensible things of any one sort are not only *particular* because the Form they imitate is somehow received in matter they are also *perishable* because of that fact The receptacle is the principle of generation or of change It is Timaeus says the natural recipient of all impressions which is stirred and informed by them and appears different from time to time by reason of them but the forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner

Matter as Plato here suggests is the mother of changing things things which between coming to be and passing away are what they are because of the unchanging Forms The Form which is received in matter for a time makes the changing thing an *imitation* as the matter in which the Form is received makes the changing thing a *participation*

The admittedly mysterious partaking of the Forms by the formless receptacle constitutes the realm of becoming in which being and non being are mixed But the Forms or Ideas themselves existing apart from their sensible imitations are uncreated and indestructible never receiving anything from without nor going out to any other but invisible and imperceptible by any sense They constitute the realm of pure being They are the intelligible reality

THE CRITICISM OF the Forms or Ideas which we find in the writings of Aristotle is primarily directed against their separate existence Plato was not far wrong Aristotle says when he said that there are as many Forms as there are kinds of natural object but he immediately adds the qualification if there are Forms distinct from the things of this earth It is precisely that supposition which Aristotle challenges

Aristotle's criticism of Plato stems from his own notion of substance and especially from his conception of sensible substances as composed of matter and form He uses the word substance to signify that which exists in and of itself or in other words that which exists separately from other things Hence when he says that in addition to sensible substances

Plato posited two kinds of substances—the Forms and the objects of mathematics he is translating the affirmation that the Forms have being separately from the sensible world of changing things into an assertion that they are substances

Socrates did not make the universals or the definitions exist apart Aristotle writes but referring to the Platonists he says they however gave them separate existence and this was the kind of thing they called Ideas What proof is there he repeatedly asks for the separate existence of the Forms or universals or the objects of mathematics Of the various ways in which it is proved that the Form exist he declares none is convincing Furthermore he objects to the statement that all other things come from the Forms for to say that they are patterns and the other things share in them is to use empty words and poetical metaphors There is the additional difficulty he thinks that there will be several patterns of the same thing and therefore several Forms e.g animal and two footed and also man himself will be Forms of man

Aristotle's denial of separate existence or substantiality to the Ideas or universals stand side by side with his affirmation of the place of forms in the being of substances and the role of universals in the order of knowledge Furthermore he limits his denial of the substantiality of Ideas to those Forms which seem to be the archetypes or models of sensible things Par

its own d. essential. Idea which is always one and the same he will have nothing, on which his mind can rest and so be well utterly despoil the power of reason.<sup>10</sup>"

The Aristotelian theory has difficulties of its own with respect to the ultimate character of matter apart from all forms. Completely formless matter would be pure potentiality and would therefore have no actual being. It would be empty. As Aquinas' sense form is the property of anything it is illegitimate. Nevertheless, something like formless matter seems to be involved in substantial change in contrast to the substantially formed matter which is the substance of accidental change.

The problem of prime matter is related in turn to questions to the problem of the number and order of the various forms which matter can take. The question is whether matter must have a substantial form before it can have any accidental form, and whether it can have a second substantial form in addition to a first, or is limited to having a single substantial form, all subsequent forms necessarily being accidental.

Aquinas plainly argues in favor of the unity of substantial form. "Nothing is absolutely one" he maintains, "except by one form, by which a thing has been, because a thing has both being and matter from the same source and therefore things which are denominated by various forms are not absolutely one as, for instance a white man. If therefore" Aquinas continues, "man were made by one form, the vegetative soul, and animal by another form, the sensitive soul and man by another form, the intellectual soul, it would follow that man is not absolutely one." We must therefore, conclude, he says, "that the intellectual soul, the sensitive soul, and the nutritive soul are in man essentially one, and the same soul." In other words, "of one thing, there is but one substantial form. It is not only "impossible that there be in man another substantial form besides the intellectual soul," but there is also no need of such a body because "the intellectual soul contains virtually what it belongs to the sensuous soul of brutes, animals and the nutritive soul of plants."

The Aristotelian theory also has difficulties in respect to substantial forms as objects of

knowledge and definition. The definition which the mind formulates attempts to give the essence of the thing defined. The formalizable essence of a thing would seem to be identical with its form. But Aristotle raises the question and his followers debate at length whether the essence of a composite substance is identical with its substantial form or includes it in matter as well.

Among his followers Aquinas maintains that in defining the essence or species of a composite substance the genus is used to specify the matter and the differentia the form. "Some hold" he writes, "that the form alone belongs to the species, while the matter is part of the individual, and not of the species. This cannot be true for to the nature of the species belongs what the definition specifies, and in natural things the definition does not "encompass" the form only but the form and the matter. Hence in natural things the matter is part of the species not isolated, signified matter which is the principle of individuation but common matter." He explains in another place that "matter is two-fold common and signified or individual common, such as flesh and bone individual, such as this flesh and these bones." In sum, the universal concept man for example the intellect abstracts the notion of the species "from this flesh and these bones" which do not belong to the species as such, but to the individual. But the species of man cannot be abstracted by the intellect from flesh and bones.

As will be seen in the chapters on OME AND MATTER and UNIVERSAL AND PARTICULAR the Platonic and the Aristotelian theories of form are equally involved in the great problem of the universal and the individual. Even though they seem to be diametrically opposed on the existence of universals—whether apart from or only in minds—both Plato and Aristotle face the necessity of explaining individual. What makes the particular that realizes a universal Form the unique individual it is? What makes the indwelling form of a composite substance an individual form, as unique as the individual substance of which it is the form?

We have already noted that both Platonism and Aristotelianism appeal to matter as somehow responsible for individuation or individuality but that each raises further questions. The

analysis of the being of changing things Illustrative applications of this theory will be found in the chapters on ART CAUSE and CHANGE

Some forms are sensible Some are shapes some are qualities some are quantities But not all forms are perceptible by the senses as for example the form which matter takes when a plant or animal is generated and which gives the generated thing its specific nature This type of form came to be called a substantial form because it determines the kind of substance which the thing is In contrast the forms which determine the properties or attributes of a thing are called its accidents or accidental forms For example size and shape color and weight are accidental forms of a man whereas that by virtue of which this thing (*having a certain size shape and color*) is a man is its substantial form

Aristotle's distinction between substantial and accidental form affects his analysis of change and his conception of matter Generation and corruption are for him substantial change in which matter undergoes transformation with respect to its substantial form The various types of motion—alteration increase or decrease and local motion—are changes which take place in enduring substances and with respect to their accidental forms

The substratum of accidental change is not formless matter but matter having a certain substantial form whereas in the coming to be or passing away of substances the substratum would seem to be a primary sort of matter devoid of all form As indicated in the chapter on MATTER this according to Aristotle is the primary substratum of each thing from which it comes to be without qualification and which persists in the result He tries to help us grasp prime matter by using an analogy As the bronze is to the statue the wood to the bed he writes so is the underlying nature to substance —matter absolutely formless to substantial form

Aristotle sometimes speaks of the substantial form as a first act or actuality and of accidental forms as second actualities Accordingly he also distinguishes between a primary and secondary kind of matter—the one absolutely potential and underlying substantial change the other

partly actualized and partly potential and involved in accidental change Primary matter Aquinas explains has substantial being through its form But when once it exists under one form it is in potentiality to others.

Perhaps one more distinction should be mentioned because of its significance for later discussions of form Regarding living and non-living things as essentially distinct Aristotle differentiates between the forms constituting these two kinds of substances As appears in the chapter on SOUL he uses the word soul to name the substantial form of plants animals and men

BOTH THE PLATONIC theory of the separate Forms and the Aristotelian theory of the composition of form and matter raise difficulties which their authors consider and which become the subject of intense controversy among Platonists and Aristotelians in the Hellenistic and medieval periods

The Platonic theory faces a question which arises from supposing the existence of an eternal and immutable Form for every appearance in the sensible world of becoming If the Idea and the individual are alike then some further idea of likeness will always be coming to light Parmenides says to Socrates and if that be like anything else then another and new ideas will be always arising if the idea resembles that which partakes of it Because of this difficulty with the doctrine of participation Parmenides suggests that it may be necessary to conclude that the Idea cannot be like the individual or the individual like the Idea In addition the relationships of the Forms to one another presents a difficulty Is the relation of one Form to another Parmenides asks determined by the essence of each Form or by the relationships among the sensible particulars that imitate the Forms in question Either solution seems to be unsatisfactory because of the further difficulties which both raise

Yet after propounding questions of this sort and multiplying difficulties Parmenides concludes by telling Socrates why the theory of Ideas cannot be given up If a man fixing his attention on these and like difficulties he says does away with the Forms of things and will not admit that every individual thing has

us own determinate Idea which is always one and the same he will have nothing on which his mind can rest and so he will surely destroy the power of reasoning.

The Aristotelian theory has difficulties of its own with respect to the ultimate character of matter apart from all forms. Completely formless matter would be pure potentiality and would therefore have no actual being. It could not be completely unintelligible since form is the principle of anything's intelligibility. Nevertheless something like formless matter seems to be involved in substantial change in contrast to the substantially formed matter which is the substratum of accidental change.

The problem of prime matter is related in last speculations to the problem of the number and order of the various forms which matter can take. The question is whether matter must have a substantial form before it can have any accidental form, and whether it can have a second substantial form in addition to a first or is limited to having a single substantial form all subsequent forms necessarily being accidental.

Aquinas plainly argues in favor of the unity of substantial form. Nothing is absolutely one, he maintains, except by one form by which a thing has being because a thing has both being and unity from the same source and therefore things which are denominated by various forms are not absolutely one as for instance a white man. If therefore Aquinas continues, man were living by one form the vegetative soul and animal by another form the sensitive soul and man by another form the intellectual soul, it would follow that man is not absolutely one. We must therefore conclude, he says, that the intellectual soul, the sensitive soul and the nutritive soul are in man numerically one and the same soul. In other words, of one thing there is but one substantial form. It is not only impossible that there be in man another substantial form besides the intellectual soul, but there is also no need of any other because the intellectual soul contains virtually whatever belongs to the sensitive soul of brute animals and the nutritive soul of plants.

The Aristotelian theory also has difficulties with respect to substantial forms as objects of

knowledge and definition. The definition which the mind formulates attempts to state the essence of the thing defined. The formula for the essence of a thing would seem to be identical with its form. But Aristotle raises the question and his followers debate at length whether the essence of a composite substance is identical with its substantial form or includes its matter as well.

Among his followers Aquinas maintains that in defining the essence or species of a composite substance the genus is used to signify the matter and the differentia the form. Some held he writes, that the form alone belongs to the species, while the matter is part of the individual and not of the species. This cannot be true for to the nature of the species belongs what the definition signifies and in natural things the definition does not signify the form only but the form and the matter. Hence in natural things the matter is part of the species not indeed specific matter which is the principle of individuation but common matter. He explains in another place that matter is twofold common and specific or individual common such as flesh and bone; individual such as this flesh and these bones. In forming the universal concept man for example the intellect abstracts the notion of the species from this flesh and these bones which do not belong to the species as such but to the individual. But the species of man cannot be abstracted by the intellect from flesh and bones.

As will be seen in the chapters on ONE AND MANY and UNIVERSAL AND PARTICULAR the Platonic and the Aristotelian theories of form are equally involved in the great problem of the universal and the individual. Even though they seem to be diametrically opposed on the existence of universals—whether apart from or only in minds—both Plato and Aristotle face the necessity of explaining individuality. What makes the particular that imitates a universal Form the unique individual it is? What makes the individual form of a composite substance an individual form as unique as the individual substance of which it is the form?

We have already noted that both Platonists and Aristotelians appeal to matter as somehow responsible for individuation or individuality but that only raises further questions. The

analysis of the being of changing things Illustrative applications of this theory will be found in the chapters on ART CAUSE and CHANGE

Some forms are sensible Some are shapes some are qualities some are quantities But not all forms are perceptible by the senses as for example the form which matter takes when a plant or animal is generated and which gives the generated thing its specific nature This type of form came to be called a substantial form because it determines the kind of substance which the thing is In contrast the forms which determine the properties or attributes of a thing are called its accidents or accidental forms For example size and shape color and weight are accidental forms of a man whereas that by virtue of which this thing (having a certain size shape and color) is a man is its substantial form

Aristotle's distinction between substantial and accidental form affects his analysis of change and his conception of matter Generation and corruption are for him substantial change in which matter undergoes transformation with respect to its substantial form The various types of motion—alteration increase or decrease and local motion—are changes which take place in enduring substances and with respect to their accidental forms

The substratum of accidental change is not formless matter but matter having a certain substantial form whereas in the coming to be or passing away of substances the substratum would seem to be a primary sort of matter devoid of all form As indicated in the chapter on MATTER this according to Aristotle is the primary substratum of each thing from which it comes to be without qualification and which persists in the result He tries to help us grasp prime matter by using an analogy As the bronze is to the statue the wood to the bed he writes so is the underlying nature to substance —matter absolutely formless to substantial form

Aristotle sometimes speaks of the substantial form as a first act or actuality and of accidental forms as second actualities Accordingly he also distinguishes between a primary and secondary kind of matter—the one absolutely potential and underlying substantial change the other

partly actualized and partly potential and involved in accidental change Primary matter Aquinas explains, has substantial being through its form But when once it exists under one form it is in potentiality to others.

Perhaps one more distinction should be mentioned because of its significance for later discussions of form Regarding living and non-living things as essentially distinct Aristotle differentiates between the forms constituting these two kinds of substances As appears in the chapter on SOUL he uses the word soul to name the substantial form of plants animals, and men

BOTH THE PLATONIC theory of the separate Forms and the Aristotelian theory of the composition of form and matter raise difficulties which their authors consider and which become the subject of intense controversy among Platonists and Aristotelians in the Hellenistic and medieval periods

The Platonic theory faces a question which arises from supposing the existence of an eternal and immutable Form for every appearance in the sensible world of becoming If the Idea and the individual are alike then some further idea of likeness will always be coming to light Parmenides says to Socrates and if that be like anything else then another and new ideas will be always rising if the idea resembles that which partakes of it Because of this difficulty with the doctrine of participation Parmenides suggests that it may be necessary to conclude that the Ideas cannot be like the individual or the individual like the Idea In addition the relationships of the Forms to one another presents a difficulty Is the relation of one Form to another Parmenides asks determined by the essence of each Form or by the relationships among the sensible particulars that imitate the Forms in question? Either solution seems to be unsatisfactory because of the further difficulties which both raise

Yet after propounding questions of this sort and multiplying difficulties Parmenides concludes by telling Socrates why the theory of Ideas cannot be given up If a man fixing his attention on these and like difficulties he says does away with the Forms of things and will not admit that every individual thing has

which God in the beginning created was unformed and void. Aquinas argues that if formless matter preceded in duration it already existed for this is implied by duration. To say then, that matter preceded but without form, is to say that being existed actually yet without actuality which is a contradiction in terms. Hence we must assert that primary matter was not created altogether formless. But neither according to Aquinas can the form of any material thing be created apart from its matter. Forms and other non-subsisting things, which are said to co-exist rather than to exist he declares ought to be called concreted rather than created things.

Aristotle's theory of physical substances as composite of form and matter raises certain special difficulties for Christian theology. Those

who like Aquinas adopt his theory must also adapt it to supernatural conditions when they deal with the problems of substance involved in the mystery of the Incarnation of the second person of the Trinity and the mystery of transubstantiation in the Eucharist.

Furthermore Aristotle's identification of soul with the substantial form of a living thing makes it difficult to conceive the separate existence of the individual human soul. Again an adaptation is required. As indicated in the chapters on IMMORTALITY and SOUL, the Christian doctrine of personal survival is given an Aristotelian rendering by regarding the human soul as a form which is not completely material. Hence it is conceived as capable of self-subsistence when with death and the dissolution of the composite nature it is separated from the body.

## OUTLINE OF TOPICS

1 Form in relation to becoming or change	PAC
1a Forms as immutable models or archetypes the exemplar ideas	536
1b Forms as indwelling causes or principles	
1c The transcendental or <i>a priori</i> forms as constitutive of order in experience	537
1d The realization of forms in the sensible order	
(1) Imitation or participation the role of the receptacle	
(2) Creation generation production embodiment in matter or substratum	
2 The being of forms	538
2a The existence of forms separately in matter in mind	
2b The eternity of forms the perpetuity of species the divine ideas	
2c Form in the composite being of the individual thing	
(1) The union of matter and form potentiality and actuality	539
(2) The distinction between substantial and accidental forms	
(3) The unity of substantial form prime matter in relation to substantial form	
2d Animal and human souls as self-subsistent forms the substantiality of thought or mind in separation from extension or body	
3 Form in relation to knowledge	540
3a Sensible form intelligible forms the forms of intuition and understanding	
3b The problem of the universal knowledge of the individual	
3c Form and definition the formulable essence the problem of matter in relation to definition	541
4 The denial of form as a principle of being becoming or knowledge	

Platonists conceive matter as the receptacle of all Forms and so in itself absolutely formless. How then can it cause the particularizations which must be accounted for? Since prime matter like the receptacle is formless the Aristotelians resort to what they call signate matter or individual matter to explain the individuality of forms and substances but it has been argued that this only begs the question rather than solves it.

**THE CORRELATIVE terms** *form* and *matter* seem to occur in modern thought under the guise of certain equivalents as for example the distinct substances which Descartes calls thought and extension — *res cogitans* and *res extensa* — or the infinite attributes of substance which Spinoza calls mind and body. They appear more explicitly in Kant's analysis of knowledge related as the *a priori* and the *a posteriori* elements of experience. But it is in the great theological speculations of the Middle Ages that the most explicit and extended use of these terms is made often with new interpretations placed on ancient theories.

The doctrine of spiritual substances for example has a bearing on the theory of self-subsistent Forms. The angels are sometimes called separate forms by the theologians. They are conceived as immaterial substances and hence as simple rather than composite. But though Plotinus identifies the order of purely intelligible beings with the pure intelligences the Christian theologian does not identify the Platonic Ideas with the angels. He regards the angels as intelligences. They exist as pure forms and therefore are intelligible as well as intellectual substances. But they are in no sense the archetypes or models which sensible things resemble.

Nevertheless Christian theology does include this aspect of the Platonic theory which looks upon the Ideas as the eternal models or patterns. But as Aquinas points out the separately existing Forms are replaced by what Augustine calls the exemplars existing in the divine mind.

Aquinas remarks on the fact that whenever Augustine who was imbued with the doctrines of the Platonists found in their teaching anything inconsistent with faith he adopted it and

those things which he found contrary to faith he amended. He then goes on to say that Augustine could not adopt but had to amend the teaching of the Platonists that the forms of things subsist of themselves apart from matter. He did this not by denying the ideas according to which all things are formed but by denying that they could exist outside the divine mind. The divine ideas are the eternal exemplars and the eternal types—types. Aquinas explains insofar as they are the likenesses of things and so the principles of God's knowledge. *Exemplars* insofar as they are the principles of the making of things in God's act of creation.

The profound mystery of the creative act which projects the divine ideas into substantial or material being replaces the older problem of how physical things derive their natures by participation in the Forms. According to the Aristotelian theory both natural generation and artistic production involve the transformation of a pre-existent matter. According to the Platonic myth of the world's origin only changing things are created neither the receptacle nor the Ideas. But the Christian dogma of creation excludes everything from eternity except God.

Ideas are eternal only as inseparable from the divine mind. Being spiritual creatures the angel or self-subsistent forms are not eternal. And in the world of corporeal creatures matter as well as its forms must begin to be with the creation of things. Since matter and its forms cannot exist in separation from one another the theologians hold that God cannot create them separately. God cannot be supposed Augustine says first to have made formless matter and after an interval of time formed what He had first made formless but he goes on as intelligible sounds are made by a speaker wherein the sound issues not formless at first and afterwards receives a form but is uttered already formed so must God be understood to have made the world of formless matter but contemporaneously to have created the world. God concretes form and matter. Augustine holds giving form to matter's formlessness without any interval of time.

Defending Augustine's interpretation of the passage in Genesis which says that the earth

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II [265, 283] 12d the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page; the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS** One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e.g. *Iliad* BK II [265-283] 12d.

**BIBLE REFERENCES** The references are to book chapter and verse. When the King James and Douay versions differ in title of book or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. Old TESTAMENT *Nehemiah* 7:45-(D) II *Esdras* 7:46.

**SYMBOLS** The abbreviation esp calls the reader's attention to one or more especially relevant parts of a whole reference. Passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Reference

## *Chapter 29 GOD*

### **INTRODUCTION**

WITH the exception of certain mathematicians and physicists all the authors of the great books are represented in this chapter. In sheer quantity of references, as well as in variety, it is the largest chapter. The reason is obvious. More consequences for thought and action follow from the affirmation or denial of God than from answering any other basic question. They follow for those who regard the question as answerable only by faith or only by reason, and even for those who insist upon suspending judgment entirely.

In addition to the primary question of God's existence there are all the problems of the divine nature and of the relation of the world and man to the gods or God. The solutions of these problems cannot help influencing man's conception of the world in which he lives, the position that he occupies in it, and the life to which he is called.

The whole tenor of human life is certainly affected by whether men regard themselves as the supreme being in the universe or acknowledge a super—or—a superhuman being whom they conceive as an object of fear or love, a force to be defied or a Lord to be obeyed. Among those who acknowledge a divinity, it matters greatly whether the divine is represented merely by the concept of God—the object of philosophical speculation—or by the living God whom men worship in all the acts of piety which comprise the rituals of religion.

The most radical differences in man's conception of his own nature follow from the exclusion of divinity as its source or model on the one hand and from the various ways in which man is seen as parting with divinity on the other. Many fundamental themes and issues are therefore common to this chapter and to the chapter on Man.

SOME OF THE TOPICS in this chapter are primarily philosophical. They belong to the subject matter of rational speculation or poetic imagination in all the great epochs of our culture regardless of differences in religious belief. Other topics however are peculiarly restricted to matters of faith or religion. With respect to such matters, dogmatic differences or differences in articles of faith must be explicitly recognized.

The materials here assembled must therefore in some instances be divided according to their origin from pagan or from Jewish and Christian sources. Though no great books from the Mohammedan tradition are included in this set the fact that Gibbon discusses the Moslem faith and compares its teachings with those of Judaism and Christianity explains the inclusion of Mohammedanism in one group of topics. That is the group which deals with the doctrines common to these three religions as distinguished from the tenets on which Judaism and Christianity differ dogmatically. The existence of certain common beliefs in the western tradition enables us to begin as it seems advisable to do with the conception of God that is shared by the living religions of western culture today.

In our civilization what is denied by an atheist who says there is no God? Not idols or images which men may seek to placate. Not philosophical constructions or mythological figures. Certainly not the universe itself either as an infinite and everlasting whole or as finite and temporal but equally mysterious in its ultimate incomprehensibility to the human mind. In our civilization the atheist denies the existence of a supernatural being the object of religious belief and a creator among Jews Christians and Mohammedans. He denies the single personal God Who created the world out of

of divine and human mating. These denies exceed superhuman powers but none is completely omnipotent or omniscient not even Kronos or Zeus who cannot escape the decrees of fate. Moreover with the exception perhaps of that of Zeus the power of one divinity is often challenged and it is thwarted by another. This aspect of polytheism and its bearing on the intervention of the gods in the affairs of men are discussed in the chapter on FATE.

The extent to which we think of the pagans as idolatrous because they made graven images of their gods in human form or regard the pagan conceptions of the gods as anthropomorphic also depends on our interpretation of the word symbol. Plato for one thinks that many of the poets' descriptions of the gods and their activities should be dismissed as unworthy precisely because they debase the gods to the human level.

According to Gibbon a Greek or Roman philosopher who considered the system of polytheism as a composition of human fraud and error could disguise a smile of contempt under the mask of devotion without apprehending that either the mockery or the complaisance would expose him to the resentment of any invisible or as he conceived them imaginary powers. But the early Christians he points out say the many gods of antiquity in a much more odious and formidable light and held them to be the authors the patrons and the object of idolatry.

Those who take symbols with flat literalism might also attack Christianity as anthropomorphic and idolatrous in fact they have the defense of Christianity against this charge does not avail in the case of Roman emperor worship which insisted not in the humanization of the divine for the sake of symbolic representation but in the deification of the merely human for political purposes.

Although there are radical differences there are also certain fundamental agreements between paganism and Judaism Christianity regarding the nature of the divine. As we have already noted the deities are conceived personally not in terms of impersonal brute forces. Conceived as beings with intelligence and will the gods concern themselves with earthly society they aid or oppose man's plans

and efforts they reward men for fidelity and virtue or punish them for impurity and sin.

Despite all other differences between paganism and Christianity these agreements are substantial enough to provide many common threads of theological speculation throughout our tradition especially with regard to the abiding practical problems of how man shall view himself and his destiny in relation to the divine or the supernatural. We have therefore attempted to place passage from the great books of pagan antiquity under every heading except those which are specifically restricted to the dogmas of Judaism and Christianity—even under headings which are worded monotheistically since even here there is continuity of thought and expression from Homer and Virgil to Dante and Milton from Plato Aristotle and Plotinus to Augustine Aquinas Descartes and Kant from Lucretius to Newton and Darwin.

The doctrines known as deism and pantheism like unqualified atheism are as much opposed to the religious beliefs of polytheism as to the faith of Judaism and Christianity.

Of these two pantheism is much nearer atheism for it denies the existence of a transcendent supernatural being or beings. God is Nature. God is immanent in the world and in the extreme form of pantheism not transcendent in any way. Certain historic doctrines which are often regarded as forms of kind of pantheism seem to be less extreme than this for they do not conceive the physical universe as exhaustively the infinite being of God. The world for all its astuteness and variety may only represent an aspect of the divine nature.

According to Spinoza the attributes of extension and thought in terms of which we understand the world or nature as being of the divine substance are merely those aspects of God which are known to us for the divine substance consists of infinite attributes each one of which expresses eternal and necessary essence. In the conception of I for you the whole world represents only a portion of one from I divine soul. You think like Platon and Spinoza conceive I am one of I am the God that is in the created substance—the God that creates the created substance and living doctrine of creation provides

nothing Who transcends this created universe and sustains it by His immanent power Who has made laws for the government of all things and cares for each particular by His providence and Who created man in His own image revealed Himself and His will to men and metes out eternal rewards and punishments to the children of Adam whom He also helps by His grace.

In this religious conception of God one term must be saved from misinterpretation. The word personal should not be read with an anthropomorphic imagery though its meaning does entitle man as well as God to be called a person rather than a thing. Although the term *person* is not found applied to God in Scripture either in the Old or New Testament Aquinas writes nevertheless what the term signifies is found to be affirmed of God in many places of Scripture as that He is the supreme self subsisting being and the most perfectly intelligent being.

Boethius had defined a person as an individual substance of a rational nature or as Locke later said a thinking intelligent being. In applying the term *person* to God in the meaning which Boethius had given it Aquinas comments on the difference in its meaning when it is applied to men. God can be said to have a rational nature he writes only if reason be taken to mean not discursive thought but in a general sense an intelligent nature. God cannot be called an individual in the sense in which physical things are but only in the sense of uniqueness. Substance can be applied to God [only] in the sense of signifying self subsistence. Aquinas does not conclude from this that person is said improperly of God but rather that when God is called personal the meaning is applied in a more excellent way for God does not possess God is an intelligence.

We shall use this idea of a personal God the utility of which the contemporary atheist denies in order to distinguish divergent conceptions in other doctrines. Then we shall examine more closely what is involved in this idea itself.

IN THE WESTERN tradition the various pagan religions—reflected especially in the poems and

histories of Greek and Roman antiquity—were all polytheistic. The number of their gods Montaigne estimates amounts to six-and-thirty thousand. Augustine offers one explanation of why there were so many. The ancients he writes being deceived either by their own conjectures or by demons supposed that many gods must be invited to take an interest in human affairs and assigned to each a separate function and a separate department—to one the body to another the soul and in the body itself to one the head to another the neck and each of the other members to one of the gods and in like manner in the soul to one god the natural capacity was assigned to another education to another anger to another lust and so the various affairs of life were assigned—cattle to one corn to another wine to another oil to another the woods to another money to another navigation to another wars and victories to another marriages to another births and fecundity to another and other things to other gods.

This polytheism no less than monotheism conceives the divine as personal appears in Plato's *Apology*. When Socrates is accused of atheism he asks whether the indictment means that he does not acknowledge the gods which the state acknowledges but some other real divinities or spiritual agencies in their stead? Meletus answers that he thinks Socrates is a complete atheist who recognizes no gods at all. To this Socrates replies by suggesting that his enemies must be confusing him with Anaxagoras who had blasphemed against Apollo by calling the sun a red hot stone. As for himself he offers evidence to show that he believes in divine or spiritual agencies new or old no matter and if I believe in divine beings he asks how can I help believing in spirits or demigods?

Like the one God of Judaism and Christianity the many gods of pagan antiquity have immortal life but they are not without origin. Zeus is the son of Kronos and he has many offspring both gods and demigods who perform different functions and are not of equal station in the Olympian hierarchy. The realm of the divine includes such figures as the Titans and the Cyclops who are neither gods nor men and demigods like Heracles who are offspring

of divine and human mating. These denies ex-  
clusive superhuman powers but none is com-  
pletely omnipotent or omniscient—not even  
Kronos or Zeus who cannot escape the decrees  
of Fate. Moreover with the exception perhaps  
of that of Zeus the power of one divinity is  
often challenged and thwarted by another. This  
aspect of polytheism and its bearing on the in-  
vention of the gods in the affairs of men are  
discussed in the chapter on FATE.

The extent to which we think of the pagans as idolatrous because they made graven images of their gods in human form or regard the pagan conceptions of the gods as anthropomorphic depends on our interpretation of religious symbolism. Plato for one thinks that many of the poets' descriptions of the gods and their activities should be dismissed as unworthy precisely because they debase the gods to the human level.

According to Gibbon a Greek or Roman philosopher who considered the system of polytheism as a composition of human fraud and error could always a smile of contempt under the mask of devotion without apprehending that either the mockery or the complaisance would expose him to the resentment of a visible or as he conceived them imaginary powers. But the early Christians he points out saw the many gods of antiquity in a much more odious and formidable light and held them to be the authors of the patron and the objects of idolatry.

Those who take symbols with flat literalism might also attack Christianity as anthropomorphic and idolatrous in fact they have. The defense of Christianity against this charge does not avail in the case of Roman emperor worship which consisted not in the humanization of the divine for the sake of symbolic representation but in the deification of the merely human for political purposes.

Although there are radical differences there are also certain fundamental agreements between paganism and Judaeo-Christianity regarding the nature of the divine. As we have already noted the latter are conceived personally not in terms of impersonal brute forces. Considered as beings with intelligence and will the gods concern themselves with earthly society they add or oppose man's plans

and efforts they reward men for fidelity and virtue or punish them for impurity and sin.

Despite all other differences between paganism and Christianity these agreements are substantial enough to provide many common threads of theological speculation throughout our tradition especially with regard to the abiding practical problems of how man shall view himself and his destiny in relation to the divine or the supernatural. We have therefore attempted to place passages from the great books of pagan antiquity under every heading except those which are specifically restricted to the dogmas of Judaism and Christianity—even under headings which are worded monotheistically since even here there is continuity of thought and expression from Homer and Virgil to Dante and Milton from Plotinus to Augustine Aquinas, Descartes, and Kant from Lucretius to Newton and Darwin.

**THE DOCTRINES KNOWN AS DENIAL AND PANTHEISM** like unqualified atheism are as much opposed to the religious beliefs of polytheism as to the faith of Judaism and Christianity.

Of these two pantheism is much nearer atheism for it denies the existence of a transcendent supernatural being or beings. God is Nature. God is immanent in the world and in the extreme form of pantheism not transcendent in any way. Certain historic doctrines which are often regarded as forms or kinds of pantheism seem to be less extreme than this, for they do not conceive the physical universe as exhausting the infinite being of God. The world for all its vastness and variety may only represent an aspect of the divine nature.

According to Spinoza the attributes of extension and thought in terms of which we understand the world or nature as being of the divine substance are merely those aspects of God which are known to us for the divine substance consists of infinite attributes each one of which expresses eternal and infinite essence. In the conception of Plotinus the whole world is only a partial emanation from the divine source. Yet thinkers like Plotinus and Spinoza conceive the relation of the world to God that—is in the strictest pantheism—the religious doctrine of creation providence and

*nothing* Who transcends this created universe and sustains it by His immanent power Who has made laws for the government of all things and cares for each particular by His providence and Who created man in His own image revealed Himself and His will to men and metes out eternal rewards and punishments to the children of Adam whom He also helps by His grace

In this religious conception of God one term must be saved from misinterpretation. The word personal should not be read with anthropomorphic imagery though its meaning does entitle man as well as God to be called a person rather than a thing. Although the term *person* is not found applied to God in Scripture either in the Old or New Testament Aquinas writes nevertheless what the term signifies is found to be affirmed of God in many places of Scripture as that He is the supreme self subsisting being and the most perfectly intelligent being.

Boethius had defined a person as an individual substance of rational nature or as Locke later said a thinking intelligent being. In applying the term *person* to God in the meaning which Boethius had given it Aquinas comments on the difference in its meaning when it is applied to men. God can be said to have a rational nature he writes only if reason be taken to mean not discursive thought but in a general sense in intelligent nature. God cannot be called an individual in the sense in which physical things are but only in the sense of uniqueness. Substance can be applied to God [only] in the sense of signifying self subsistence. Aquinas does not conclude from this that person is said improperly of God but rather that when God is called personal the meaning is applied in a more excellent way for God does not possess God is an intelligence.

We shall use this idea of a personal God the reality of which the contemporary atheist denies in order to distinguish divergent conceptions in other doctrines. Then we shall examine more closely what is involved in this idea itself.

IN THE WESTERN tradition the various pagan religions—reflected especially in the poems and

histories of Greek and Roman antiquity—were all polytheistic. The number of their gods Montaigne estimates amounts to six and thirty thousand. Augustine offers one explanation of why there were so many. The ancients he writes being deceived either by their own conjectures or by demons supposed that many gods must be invited to take an interest in human affairs and assigned to each a separate function and a separate department—to one the body to another the soul and in the body itself to one the head to another the neck and each of the other members to one of the gods and in like manner in the soul to one god the natural capacity was assigned to another education to another anger to another lust and so the various affairs of life were assigned—cattle to one corn to another wine to another oil to another the woods to another money to another navigation to another wars and victories to another marriages to another births and fecundity to another and other things to other gods.

This polytheism no less than monothelism conceives the divine as personal appears in Plato's *Apology*. When Socrates is accused of atheism he asks whether the indictment means that he does not acknowledge the gods which the state acknowledges but some other few divinities or spiritual agencies in their stead. Meletus answers that he thinks Socrates is a complete atheist who recognizes no gods at all. To this Socrates replies by suggesting that his enemies must be confusing him with Anaxagoras who had blasphemed against Apollo by calling the sun a red hot stone. As for himself he offers evidence to show that he believes in divine or spiritual agencies new or old no matter and if I believe in divine beings he asks how can I help believing in spirits or demigods?

Like the one God of Judaism and Christianity the many gods of pagan antiquity have immortal life but they are not without origin. Zeus is the son of Kronos and he has many offspring both gods and demigods who perform different functions and are not of equal station in the Olympian hierarchy. The realm of the divine includes such figures as the Titans and the Cyclops who are neither gods nor men and demigods like Heracles who are offspring

of divine and human nature. These deities exercise superhuman powers but none is completely omnipotent or omniscient—not even heroes or Zeus who cannot escape the decrees of fate. Moreover with the exception perhaps of that of Zeus, the power of one divinity is often challenged and thwarted by another. This aspect of polytheism and its bearing on the intervention of the gods in the affairs of men are discussed in the chapter on FATE.

The extent to which we think of the pantheans as idolatrous because they made graven images of their gods in human form or regard the panthean conceptions of the gods as anthropomorphic depends on our interpretation of religious symbolism. Plato for one thinks that many of the poets' descriptions of the gods and their actions should be dismissed as unworthy merely because they debase the gods to the human level.

According to Gibbon a Greek or Roman philosopher who considered the system of polytheism a composition of human fraud and error could disguise a smile of contempt under the mask of devotion without appearing that either the mockery or the compliment would expose him to the resentment of any in uscible or as he conceived them imaginary powers. But the early Christians he points out saw the many gods of antiquity in a much more ominous and formidable light and held them to be the authors, the patrons and the objects of idolatrie.

Those who take symbols with flat literalism might also attack Christianity as anthropomorphic and idolatrous in fact they have. The defense of Christianity against this charge does not avail in the case of Roman emperor worship which consisted not in the humanization of the divine for the sake of symbolic representation but in the deification of the merely human to political purposes.

Although there are radical differences, there are also certain fundamental agreements between paganism and Judaeo-Christianity regarding the nature of the divine. As we have already noted, the deities are concrete personal, not a term of impersonal, brute forces. Concerning a being with intellect, force and will the gods concern themselves with the world; they also oppose man's plan

and offer it them reward men for fidelity and virtue or punish them for impurity and sin.

Despite all other differences between pantheism and Christianity these agreements are substantial enough to provide many common threads of theological speculation throughout our tradition especially with regard to the abiding practical problems of how man shall view himself and his destiny in relation to the divine or the supernatural. We have therefore attempted to place extracts from the great books of pagan antiquity under various headings except those which are specifically restricted to the dogmas of Judaism and Christianity—e.g. under headings which are worded monotheistically since even here there is continuity of thought and expression from Homer and Virgil to Dante and Milton from Plato, Aristotle and Plotinus to Augustine, Aquinas, Descartes, and Kant from Lucretius to Newton and Darwin.

The doctrines known as deism and pantheism like unqualified atheism, are as much opposed to the religious beliefs of polytheism as to the faith of Judaism and Christianity.

Of these two pantheism is much nearer atheism for it denies the existence of a transcendent supernatural being, or beings. God is *Natur*. God is immanent in the world and in the extreme form of pantheism, not transcentent in any way. Certain historic doctrines which are often regarded as forms of pantheism seem to be less extreme than this, for they do not conceive the physical universe as exhausting the infinite being of God. The world for all its vastness and variety may only represent an aspect of the divine nature.

According to Spinoza the attributes of extension and thought in terms of which we understand the world or nature as being of the divine substance are surely those aspects of God which are known to us, for the divine substance consists of infinite attributes each one of which expresses eternal and infinite essence. In the conception of Plotinus, the whole world represents only a partial emanation from the divine source. Yet thinkers like Plotinus and Spinoza conceive the relation of the world to God that is in the strictest pantheism—the religious doctrines of traditional provider and

salvation are either rejected or profoundly altered

In the ancient world the teaching of the Stoic philosophers expresses a kind of pantheism. "There is one universe made up of all things," Marcus Aurelius writes, "and one God who pervades all things and one substance and one law, one common reason in all intelligent animals and one truth." He speaks of the common nature which is apparently divine and of which every particular nature is a part as the nature of the leaf is a part of the nature of the plant. But although he stresses the oneness and divinity of all things, Aurelius also at times uses language which seems to refer to a god who dwells apart from as well as in the world as, for example, when he debates whether the gods have any concern with human affairs.

Another type of ancient pantheism appears in the thought of Plotinus, for whom all things have being only insofar as they participate in even as they emanate from the power of The One or Primal Source. God is sovereignly present through all, he writes. We cannot think of something of God here and something else there nor of all of God gathered at some one spot; there is an instantaneous presence everywhere, nothing containing and nothing left void; everything therefore fully held by the divine. The relation between The One and every other thing is compared to the number series. Just as there is primarily or secondarily some form or idea from the monad in each of the successive numbers—the latter still participating though unequally in the unit—so the series of beings following upon The First bear each some form or idea derived from that source. In Number the participation establishes Quantity in the realm of Being; the trace of The One establishes reality; existence is a trace of The One.

But although The One is in all things and all things depend upon it for their very existence, The One itself has no need of them. It is in this sense that Plotinus says that "The One is all things and no one of them." Holding all—though itself nowhere held—it is omnipresent for where its presence failed something would elude its hold. At the same time in the sense that it is nowhere held, it is not present thus

it is both present and not present, not present as not being circumscribed by anything yet as being utterly unattached, not inhibited from presence at any point. Thus all things partake of The One in absolute dependence. But The One considered in itself is absolutely transcendent. Plotinus even denies it the name of God or Good or Being, saying it is beyond these.

Whether or not Spinoza is a pantheist has long been debated by his commentators. An explicit even an extreme form of pantheism would seem to be expressed in the proposition that whatever is is in God and nothing can be or be conceived without God. But while the one and only substance which exists is at once nature and God, Spinoza identifies God only with the nature he calls *natura naturans*. God is not reduced to the nature that fall within man's limited experience or understanding—the nature he calls *natura naturata*.

By *natura naturans*, he explains, we are to understand that which is in itself and is conceived through itself or those attributes of substance which express eternal and infinite essence that is to say God in so far as He is considered as a free cause. But by *natura naturata* I understand everything which follows from the necessity of the nature of God or of any one of God's attributes that is to say all the modes of God's attributes in so far as they are considered as things which are in God and which without God can neither be nor can be conceived.

God is the infinite and eternal substance of all finite existences, an absolute and unchanging one underlying the finite modes in which it variably manifests itself. Though God for Spinoza is transcendent in the sense of vastly exceeding the world known to man in no sense does God exist apart from the whole of nature. Spinoza's view thus sharply departs from that of an orthodox Jewish or Christian theologian. When the latter says that God is transcendent, he means that God exists apart, inherently removed from the whole created universe. When the latter speaks of God as being imminent in that universe, he carefully specifies that it is not by His substance but by the power of His action and knowledge. But Spinoza calls God the immanent and not the transitive cause of

all there," for the reason that "we said God there can be no wise race that is to set out of His power can exist which is in itself."

These divergent conceptions of God's immanence and transcendence—so relevant to the question of who is or is not a pantheist—are further discussed in the chapters on Nature and World.

In *Lucretius* the materialism affirms gods or a God, personal intelligences existing apart from the world but as in the teaching of Lucretius, does sometimes goes to the extreme of belief in absentee gods who neither intervene in the order of nature nor concern themselves with human affairs.

"The nature of the gods," Lucretius writes, "is not in itself of necessity envious or covetous; nor do they interfere with supreme power for reward and withdrawn from our concerns since time past even gods exempt from all care, strong in its own resources, not want the aid of us. It is neither gained by favors nor coveted by a god."

Such gods neither create the world nor govern it above all; they do not reward or punish man, and so they do not have to be feared or propitiated. "To say that for the sake of men they have willed to set in order the glorious nature of the world and therefore it is meet to praise the work of the gods immortal, and that it is an unholy thing to shake by force from its fixed seat that which by the favor of the gods in ancient day has been established on everlasting foundations for mankind, or to assail it by speech and uttered or run it from top to bottom and to intent and add other torment of the kind—is all absurd. For what advantage can our gratitude bestow on immortal and blessed beings that so our sakes they should take in hand to abominate us?"

Divine power seems to have a moral significance to Lucretius, so far as the gods exemplify the divine life and religion is immoral because its service is not from divine motives and conduct makes men servile and miserable.

When the deism of Lucretius is contrasted with the more familiar modern forms of that doctrine, the influence of Christianity is seen. The most radical affirms the supremacy of one

God, the infinite and eternal Creator of the world. Whose laws are the laws of nature which are laid down from the beginning, and which govern all created things. Rousseau speaks of this as "the religion of man" and even identifies it with Christianity—"not the Christianity of today, but that of the Gospel which is even so different. He describes this religion as that "which has neither temples, nor altars, nor rites, and is confined to the purely natural cult of the supreme God and the eternal obligations of morality."

Not all deists, certainly not those of the 17th and early 18th centuries, go to the Lucretian extreme of picture an unintelligent and morally neutral God. Many of them believe in a God after life. But modern deists tend toward this extreme. By Kant's time it had been ceased to look upon God as a personal intelligence. Kant therefore takes great pains to distinguish deism from theism.

The deist according to Kant "admits that we can conceive by pure reason alone the existence of a supreme being, but at the same time maintains that our conception of this being is purely transcendental, and that all we can say of it is, that it possesses all reality without being, able to do for it more closely." The theist on the other hand "asserts that reason is capable of presenting us, from the analogies with nature with a more definite conception of this being, and that its operations, as the cause of all things, are the results of intelligence and free will."

Kant even maintains that we might in strict rigor deny to the deist any belief in God at all, and regard him merely as a maintainer of the existence of a primal being, or thing—the supreme cause of all other things. In any case deism seems to be an essentially non-Jewish and non-Christian or anti-Jewish and anti-Christian doctrine for it denies God's supernatural revelation of Himself, it denies miracles and other other manifestations of supernatural agency in the course of nature or the life of man; it denies the efficacy of prayer and sacrament. In short it rejects the institutions and practices, as well as the faith and hope of all religions which claims supernatural foundation and supernatural warrant for its dogmas and rituals. Deism, which consists simply in the worship

of a God considered as great powerful and eternal is in Pascal's opinion almost as far removed from the Christian religion as atheism which is its exact opposite

What Pascal and Kant call deism and Rousseau the religion of man others like Hume call natural religion His *Dialogues Concerning Natural Religion* provide a classic statement of rationalism which is the same as naturalism in religion though as the chapter on RELIGION indicates it may be questioned whether the word religion can be meaningfully used for a doctrine which claims no knowledge beyond that of the philosopher and no guidance for human life beyond the precepts of the moralist

The systematic exposition of man's knowledge of God is the science of theology In addition to considering all things—the whole world and human life—in relation to God theology treats especially of God's existence essence and attributes Throughout the range of its subject matter and problems theology may be of two sorts it may be either natural knowledge obtained by ordinary processes of observation and reasoning or knowledge which is supernatural in the sense of being based on divine revelation This is the traditional distinction between natural and sacred or as it is sometimes called dogmatic theology The one belongs to the domain of reason it is the work of the philosopher The other belongs to the domain of faith and is the work of the theologian who seeks to understand his faith

These distinctions are discussed in the chapters on THEOLOGY METAPHYSICS and WISDOM Here we are concerned with different attitudes toward the problem of man's knowledge of God The deist as we have seen rejects supernatural revelation and faith theology like religion is held to be entirely natural a work of reason The agnostic makes the opposite denial He denies that anything supernatural can be known by reason It cannot be proved or for that matter disproved The evidences of nature and the light of reason do not permit valid inferences or arguments concerning God or creation providence or immortality

It is usually with respect to God's existence that the agnostic most emphatically declares

reason's incompetence to demonstrate He often accompanies the declaration with elaborate criticisms of the arguments which may be offered by others This is not always the case however For example the great Jewish theologian Moses Maimonides thinks that God's existence can be proved by reason entirely apart from faith but with regard to the essence or attributes of God his position seems to be one which might be called agnostic

When men ascribe essential attributes to God Maimonides declares these so-called essential attributes should not have any similarity to the attributes of other things just as there is no similarity between the essence of God and that of other beings Since the meaning of such positive attributes as good or wise is derived from our knowledge of things they do not provide us with any knowledge of God's essence for no comparison obtains between things and God Hence Maimonides asserts that the negative attributes of God are the true attributes They tell us not what God is but what God is not

Even though Maimonides holds that existence and essence are perfectly identical in God he also insists that we comprehend only the fact that He exists not His essence All we understand he goes on to say in addition to the fact that He exists is the fact that

*He is a Being to whom none of his creatures is similar* This fact is confirmed in all the negative attributes such as eternal (meaning non-temporal) infinite or incorporeal even as it is falsified by all the positive attributes expressed by such names as good or living or knowing insofar as they imply a comparison between God and creatures When they cannot be interpreted negatively they can be tolerated as metaphors but they must not be taken as expressing an understanding of the true essence of God concerning which Maimonides maintains there is no possibility of obtaining a knowledge

Aquinas takes issue with such monosticism about the divine nature in his discussion of the names of God Although he says that we can not know what God is but rather what He is not Aquinas disagrees with Maimonides that all names which express some knowledge of God's essence must be interpreted negatively

or treated as metaphors. He denies that "when we say God is, we mean merely that God is not like an inanimate thing, as was said by Ruth Moses." On the contrary he holds that "these names signify the divine substance although they fall short of representing Him."

For these names express God, so far as our intellects know Him. Now since our intellect knows God from creatures, it knows Him as far as creatures represent Him." Therefore Aquinas concludes, "when we say God is good, the meaning is not God is the cause of goodness, or God is not evil; but the meaning is, Whatever good we ascribe to creatures proceeds from God, and in a his/her way."

If Manichees were right that the names which are said positively of both God and creatures are "applied in a purely equivocal sense" (e.g. taking literal meaning when said of creatures but being only metaphorical when said of God) then according to Aquinas, it would follow that from creatures nothing at all could be known or demonstrated about God. Those who say on the other hand that the things attributed to God and creatures are univocal (i.e., are said in exactly the same sense) claim to comprehend more than man can know of the divine essence. When the term *esse* is applied to God," Aquinas writes, "it leaves the thing signified as uncomprehended and as exceeding the signification of the name. Hence it is evident that this term *esse* is not applied in the same way to God and to man. The same applies to other terms. Hence no name is predicated univocally of God and creatures but rather all positive names are said of God and creatures in an analogical sense."

A further discussion of the names of God will be found in the chapter on St. Anselm and St. Bonaventure, and the coded ration of the analogical, the univocal, and the equivocal will also be found there as well as in the chapter on St. Thomas Aquinas. We have dealt with these matters here only for the sake of describing that degree of association according to which Manichees, by contrast with Aquinas, is an atheist. But against them we shall go further and denies that man can have any natural knowledge of God—either of His existence or of His essence.

So understood a nominalism need not be incompatible with religion unless a given religion holds, as an article of faith itself, that the existence of God can be proved by reason. In fact the a nominalist may be a religious man who accepts divine revelation and regards Luther as divinely inspired.

Montaigne's *Apology for Raymond de Sebonde* illustrates this position. Sebond had written a treatise on natural theology which to Montaigne seems hardly and bold for he undertakes, by human and natural reasons to establish and make good against the atheists all the articles of the Christian religion." Though Montaigne says of his work "I do not think it possible to do better upon that subject and though he entertains the conjecture that it may have been "drawn from St. Thomas Aquinas, for in truth that mind full of infinite learning and admirable subtlety" it was alone capable of such invasions" nevertheless, Montaigne does "not believe that means purely human and in any sort capable of doing it."

According to Montaigne it is faith alone that vividly and certainly comprehends the deep mysteries of our religion. In his view reason by itself is incapable of proving anything much less anything about God. Our human reasoners, "he writes, are but sterile and undigested matter; the grace of God is its form; it is that which gives it fashion and value. The light and value in Sebonde's arguments come from the fact that faith supervenes to tint and illustrate them, and renders them firm and solid."

Such arguments, Montaigne says, may serve as "direction and first guide to a learner and may even "rend him capable of the grace of God" but for himself, skeptical of all arguments, the way of faith alone can provide "a certain constancy of opinion. Thus have I by the grace of God preserved myself entire without any trouble or trouble of conscience in the ancient belief of our religion amid so many sects and divisions as our age has produced."

Far from being religious as Montaigne was, the a nominalist may be a skeptic about faith as well as reason. He may look upon faith either as superstition or as the exercise of the will to believe with regard to the unknowable and the

unintelligible—almost wishful thinking He may even go so far as to treat religion as if it were pathological

Freud for example regards religion as an illusion to be explained in terms of man's need to create gods in his own image—to find a surrogate for the father on whom his infantile dependence can be projected Freud finds confirmation for this in the fact that in the religions of the west God is openly called Father Psychoanalysis he goes on concludes that he really is the father clothed in the grandeur in which he once appeared to the small child

Though the grown man has long ago realized that his father is a being with strictly limited powers and by no means endowed with every desirable attribute Freud thinks that he nevertheless looks back to the memory image of the overrated father of his childhood exalts it into a Deity and brings it into the present and into reality The emotional strength of this memory image and the lasting nature of his need for protection—for as Freud explains in relation to the external world he is still a child—are the two supports of his belief in God

*AT THE OTHER extreme from agnosticism is as the name implies gnosticism Like deism it dispenses with faith but it exceeds traditional deism in the claims it makes for reason's power to penetrate the divine mysteries Between exclusive reliance on faith and an exaltation of reason to the point where there is no need for God to reveal anything a middle ground is held by those who acknowledge the contributions of both faith and reason Those who try to harmonize the two usually distinguish between the spheres proper to each and formulate some principle according to which they are related to each other in an orderly fashion*

Whatever is purely a matter of faith Aquinas says is assented to solely because it is revealed by God The articles of Christian faith are typified by the Trinity of Persons in Almighty God the mystery of Christ's Incarnation and the like With regard to such matters which Aquinas thinks belong primarily to faith some auxiliary use can be made of reason not indeed to prove faith he explains but to make clear the things that follow from it Certain

matters such as God's existence and attributes he classifies as belonging to the preambles to faith because they fall in his view within reason's power to demonstrate unaided by faith Yet even here he does not assign the affirmation of the truth to reason alone

Just as it was necessary for the salvation of man that certain truths which exceed human reason should be made known to him by divine revelation so even with regard to those truths about God which human reason can investigate Aquinas thinks it was also necessary that man be taught by a divine revelation For the truth about God such as reason can know it would only be known by a few and that after a long time and with the admixture of many errors Because human reason is very deficient in things concerning God—a sign of which is that philosophers have fallen into many errors and have disagreed among themselves—men would have no knowledge of God free from doubt and uncertainty unless all divine truths were delivered to them by the way of faith being told to them as it were by God Himself Who can not lie

In different ways faith supports reason and reason helps faith On matters which belong to both reason and faith faith provides a greater certitude On matters strictly of faith reason provides some understanding however remote and inadequate of the mysteries of religion.

The use of human reason in religion Bacon writes is of two sorts the former in the conception and apprehension of the mysteries of God to us revealed the other in the infering and deriving of doctrine and direction thereupon In the former we see God vouchsafeth to descend to our capacity in the expressing of his mysteries in sort as may be sensible unto us and doth graft his revelations and holy doctrine upon the notions of our reason and appliceth his inspiration to open our understanding as the form of the key to the ward of the lock For the latter there is allowed us an use of reason and argument secondary and respective although not original and absolute For after the articles and principles of religion are placed and exempted from examination of reason it is then permitted unto us to make derivations and inferences from and ac-

cording to the analogy of them for our better direction."

In addition to all descriptive knowledge of God, whether it be by faith or by reason there is the totally incomunicable and intimate acquaintance with the supernatural which the mystic claims for his vision in moments of religious ecstasy or which is promised to the blessed as their heavenly beatitude. When at the culmination of *Paradise* Dante sees God my own he declares, was greater than our speech.

Knowing that his speech will fall more short than that of an infant who still bathes his tongue at the breast he tries nevertheless to communicate in words one single spark of Thy glory for the folk to come. In the presence of God he writes, his mind wholly rapt was gazing fixed most onless, and intent and ever with gazing grew enkindled. In that Light one becomes such that it is impossible he should ever consent to turn himself from it for other so 't because the Good which is the object of the will is all collected in it and outside of it that is defective which is perfect there.

THE ARGUMENTS FOR the existence of the gods or of one God constitute one of the greatest attempts of the human mind to go beyond the sensible or phenomenal world of experience. The attempt has been made in every age and by minds of quite different persuasions in religious belief or philosophical outlook. It is possible nevertheless, to classify the arguments into two or three main types.

Within the domain of pure or speculative reason there seem to be two ways of approach in the problem of God's existence.

One is in terms of the conception of God as an infinite perfect and necessary being whose non-existence is therefore inconceivable. According to Anselm God cannot be conceived in any other way than as a being than which nothing greater can be conceived. But since the fool bath said in his heart there is no God how shall he be made to know that the God which exists in his understanding, at the moment when he denies His real existence, also really exists outside his understanding? For it is one thing for an object to be in the understanding and another to understand that the

object exists. Hence Anselm considers the consequence of supposing that God exists in the understanding alone.

If that than which nothing greater can be conceived he argues, exists in the understanding alone the very being than which nothing greater can be conceived is one than which a greater can be conceived — for to exist in reality as well as in the understanding is to have more being. But this leads to an irreconcileable contradiction since if that than which nothing greater can be conceived can be conceived not to exist it is not that than which nothing greater can be conceived. Therefore Anselm concludes that a being than which nothing greater can be conceived must exist both in the understanding and reality."

Anselm summarizes his argument by saying that no one who understands what God is can conceive that God does not exist. Since the non-existence of God is inconceivable God must exist. Descartes gives the same argument a slightly different statement in terms of the inseparability of God's essence from God's existence.

Being accustomed he writes, in all other things to make a distinction between existence and essence I easily persuade myself that the existence can be separated from the essence of God and that we can thus conceive God as not actually existing. But nevertheless, when I think of it with more attention I clearly see that existence can no more be separated from the essence of God than can its having its three angles equal to two right angles be separated from the essence of a rectilinear triangle or the idea of a mountain from the idea of a valley; and so there is not any less repugnance to our conceiving a God (that is, a Being supremely perfect) to whom existence is lacking (that is to say, to whom a certain perfection is lacking) than to conceive of a mountain which has no valley.

Spinoza defines a "cause of itself" as that whose essence involves existence or that whose nature cannot be conceived unless existing. Since in his conception of substance substance is necessarily infinite it is also cause of itself. Hence he concludes that God or substance necessarily exists for if this be denied conceive if it be possible that God does not

unintelligible—almost wishful thinking. He may even go so far as to treat religion as if it were pathological.

Freud for example regards religion as an illusion to be explained in terms of man's need to create gods in his own image—to find a surrogate for the father on whom his infantile dependence can be projected. Freud finds confirmation for this in the fact that in the religions of the west God is openly called Father. Psychoanalysis he goes on concludes that he really is the father clothed in the grandeur in which he once appeared to the small child.

Though the grown man has long ago realized that his father is a being with strictly limited powers and by no means endowed with every desirable attribute, Freud thinks that he nevertheless looks back to the memory image of the overrated father of his childhood exalts it into a Deity and brings it into the present and into reality. The emotional strength of this memory image and the lasting nature of his need for protection—for as Freud explains in relation to the external world he is still a child—are the two supports of his belief in God.

AT THE OTHER extreme from agnosticism is as the name implies gnosticism. Like deism it dispenses with faith but it exceeds traditional deism in the claims it makes for reason's power to penetrate the divine mysteries. Between elusive reliance on faith and an exaltation of reason to the point where there is no need for God to reveal anything a middle ground is held by those who acknowledge the contributions of both faith and reason. Those who try to harmonize the two usually distinguish between the spheres proper to each and formulate some principle according to which they are related to each other in an orderly fashion.

Whatever is purely a matter of faith Aquinas says is assented to solely because it is revealed by God. The articles of Christian faith are typified by the Trinity of Persons in Almighty God, the mystery of Christ's Incarnation and the like. With regard to such matters which Aquinas thinks belong primarily to faith some auxiliary use can be made of reason not in deed to prove faith he explains but to make clear the things that follow from it. Certain

matters such as God's existence and attributes, he classifies as belonging to the preambles to faith because they fall in his view within reason's power to demonstrate unaided by faith. Yet even here he does not assign the affirmation of the truth to reason alone.

Just as it was necessary for the salvation of man that certain truths which exceed human reason should be made known to him by divine revelation so even with regard to those truths about God which human reason can investigate Aquinas thinks it was also necessary that man be taught by a divine revelation. For the truth about God such as reason can know it would only be known by a few and that after a long time and with the admixture of many errors. Because human reason is very deficient in things concerning God—a sign of which is that philosophers have fallen into many errors and have disagreed among themselves—men would have no knowledge of God free from doubt and uncertainty unless all divine truths were delivered to them by the way of faith being told to them as it were by God Himself Who can not lie.

In different ways faith supports reason and reason helps faith. On matters which belong to both reason and faith faith provides a greater certitude. On matters strictly of faith reason provides some understanding however remote and inadequate of the mysteries of religion.

The use of human reason in religion Bacon writes is of two sorts the former in the conception and apprehension of the mysteries of God to us revealed the other in the inferring and deriving of doctrine and direction thereupon. In the former we see God vouchsafeth to descend to our capacity in the expressing of his mysteries in sort as may be sensible unto us and doth graft his revelations and holy doctrine upon the notions of our reason and applieth his inspiration to open our understanding as the form of the key to the ward of the lock. For the latter there is allowed us an use of reason and argument secondary and respective although not original and absolute. For after the articles and principles of religion are placed and exempted from examination of reason it is then permitted unto us to make derivations and inferences from and ac-

Without labelling it a proof of God's existence Augustine in his *Confessions* presents a similar argument—from the visible creation Behold, he says, the heavens and the earth are they proclaim that they were created for they change and vary. They proclaim also that they made not themselves therefore we are because we have been made we were not therefore before we were so as to make ourselves. Thou therefore Lord madest them

This second approach to the existence of God by reasoning from the facts of experience or the evidences of nature is called the *a posteriori* proof. In the tradition of the great books it has been formulated in many different ways. What is common to all of them is the principle of causality in terms of which the known existence of certain effects is made the basis for inferring the existence of a unique cause—a first cause a highest cause an uncaused cause.

Aristotle for example in the last book of his *Physics* argues from the fact of motion or change to the existence of an unmoved mover. He sums up his elaborate reasoning on this point in the following statement. We established the fact that everything that is in motion is moved by something and that the mover is either unmoved or in motion and that if it is in motion it is moved either by itself or by something else and so on throughout the series and so we proceeded to the position that the first principle that directly causes things that are in motion to be moved is that which moves itself and the first principle of the whole series is the unmoved.

Aristotle's argument unlike that of Augustine or Locke does not presuppose the creation of the world at least not in the sense of the world having a beginning. On the contrary he holds the world and its motions to be as eternal as their unmoved mover. It is impossible he writes in the *Metaphysics* that movement should either have come into being or cease to be. Precisely because he thinks the world's motions are eternal Aristotle holds that the prime mover in addition to being everlastingly must be immutable. This for him means a principle whose very essence is actuality. Only substance without any potency only one which *per se* actual can be an absolutely immutable eternally being.

Whatever has any potentiality in its nature is capable of not existing. If everything were of this sort nothing that now is need be for it is possible for all things to be capable of existing but not yet to exist. Hence in still another way Aristotle seems to teach the conclusion that a purely actual being must exist and furthermore he seems to identify this being with a living and thinking God. Life also belongs to God he writes for the actuality of thought is life and God is that actuality and God's self-dependent actuality is life most good and eternal.

Where Aristotle argues from motion and potentiality to a prime mover and a pure actuality Newton gives the *a posteriori* proof another statement by arguing from the design of the universe to God as its designer or architect. The most wise and excellent contrivances of things and final causes seem to him the best way of knowing God. Blind metaphysical necessity which is certainly the same always and everywhere could produce no variety in things. All that diversity of natural things which we find suited to different times and places could arise from nothing but the ideas and will of a Being necessarily existing.

In similar fashion Berkeley maintains that if we attentively consider the constant regularity order and concatenation of natural things the surprising malignancy beauty and perfection of the larger and the exquisite contrivance of the smaller parts of the creation together with the exact harmony and correspondence of the whole but above all the never enough admired laws of pain and pleasure and the instincts or natural inclinations appetites and passions of animals I say if we consider all these things and at the same time attend to the meaning and import of the attributes one eternal infinitely wise good and perfect we shall clearly perceive that they belong to the Spirit who works all in all and by whom all things consist. This seems to him so certain that he adds we may even assert that the existence of God is far more evidently perceived than the existence of men.

But according to Berkeley all the visible things of nature exist only as ideas in our minds just as they are unlike our own memories or imaginations we do not ourselves produce. Every

exist Then it follows that His essence does not involve existence But this is absurd Therefore God necessarily exists

This mode of argument which takes still other forms is traditionally called the ontological argument or the *a priori* proof of God's existence Its critics sometimes deny that it is an argument or proof in any sense at all Aquinas for example interprets Anselm not as proving God's existence but rather as asserting that God's existence is self evident Those who say that the proposition God does not exist is self contradictory are saying that the opposite proposition God exists must be self evident

Aquinas does not deny that the proposition God exists is intrinsically self evident On this point he goes further than Anselm Des cartes and Spinoza Where they say God's essence involves His existence Aquinas asserts that in God essence and existence are identical When Moses asks God If they should say to me What is His name? what shall I say to them? the Lord says unto Moses I AM THAT I AM and adds Say to the children of Israel HE WHO IS hath sent me to you This name—HE WHO IS—Aquinas holds to be the most proper name of God because it signifies that the being of God is His very essence

For this reason he thinks that the proposition God exists is self evident in itself Its subject and predicate are immediately related Nevertheless Aquinas holds that the proposition is not self evident to us because we do not know the essence of God Even supposing he writes that everyone understands this name God as signifying something than which nothing greater can be thought nevertheless it does not therefore follow that he understands that what the name signifies exists actually but only that it exists mentally Nor can it be argued that it actually exists unless it be admitted that there actually exists something than which nothing greater can be thought and this precisely is not admitted by those who hold that God does not exist

The writer of the First Set of Objections to Des cartes Meditations maintains that the criticism advanced by Aquinas applies to Des cartes as well as to Anselm Whether stated in

terms of the conception of an absolutely perfect being or in terms of essence and existence the argument is invalid he thinks which avers that God actually exists because His non-existence is inconceivable Kant's later criticism of the ontological argument takes a similar course A proposition may be logically necessary without being true in fact

The conception of an absolutely necessary being he writes is a mere idea the object & reality of which is far from being established by the mere fact that it is a need of reason The unconditioned necessity of a judgment does not form the absolute necessity of a thing From the fact that existence belongs necessarily to the object of the conception we cannot conclude that the existence of the thing is therefore absolutely necessary merely Kant says because its existence has been cogitated in the conception What ever be the content of our conception of an object it is necessary to go beyond it if we wish to predicate existence of the object The celebrated ontological or Cartesian argument for the existence of a supreme being is therefore insufficient

THE SECOND MAIN approach to the problem of God's existence lies in the sort of proof which Locke thinks our own existence and the sensible parts of the universe offer so clearly and cogently to our thoughts He refrains from criticizing the argument from the idea of a most perfect being but he does insist that we should not take some men's having that idea of God in their minds for the only proof of a Deity He for one prefers to follow the counsel of St Paul that the invisible things of God are clearly seen from the creation of the world being understood by the things that are made even his eternal power and God head

We have according to Locke an intuitive knowledge of our own existence We know he says that nonentity cannot produce any real being and so from the consideration of ourselves and what we infallibly find in our constitution our reason leads us to the knowledge of this certain and evident truth—That there is an eternal most powerful and most knowing Being

ent Aquinas himself says that in speculative matters the medium of demonstration—which demonstrates the conclusion perfectly—is only one whereas probable means of proof are many. Since he considers the argument for God's existence to be a certain not a probable proof it would seem to follow that in strict logic only one principle can be involved in that proof.

As already suggested the principle—common to all the various ways in which such a *a posteriori* reasoning is expressed—seems to be the principle of causality. This appears in the argument from the existence of contingent beings, which cannot cause their own being to the existence of a being which needs no cause of its being because its very essence is to exist. This may be the one argument for God's existence or if one among many it may be the core of all the others. It has the distinction at least of conceiving God as the cause of being rather than of motion or of hierarchy and order in the world.

According to the statement of Aquinas that being is the proper effect of God it establishes God as the unique and direct cause of the being possessed by every finite thing. This formulation of the proof is more fully examined in the chapter on NECESSITY AND CONTINGENCY and its relation to the question of whether the world had a beginning or is eternal and if eternal whether it is created or uncreated will be seen in the chapters on CAUSE, ETERNITY and WORLD.

The VALIDITY of the *a posteriori* argument for God's existence—in one form or another—is questioned by those who think that the causal principle cannot be applied beyond experience or who think that our knowledge of cause and effect is not sufficient to warrant such inferences.

The existence of any being can only be proved by arguments from its cause or its effect. Hume writes and these arguments are founded entirely on experience. It is only experience which teaches us the nature and bound of cause and effect and enables us to infer the existence of one object from that of another. But Hume doubts whether it is possible for a cause to be known only by its

effect—or to be of so singular and particular a nature as to have no parallel and no similarity with any other cause or object that has ever fallen under our observation. If experience and observation and analogy be indeed the only guides which we can reasonably follow in inferences of this nature—as Hume thinks is the case then it follows that both the effect and the cause must bear a similarity and resemblance to other effects and causes which we know.

I leave it to your own reflection he adds to pursue the consequences of this principle. One seems obvious enough namely that God—a unique and unparalleled cause—cannot be proved by reasoning from our experience of effects and their causes. Hume himself draws this conclusion when he declares that theology, insofar as it is concerned with the existence of a Deity has its best and most solid foundation not in reason or experience but in *faith* and divine revelation."

Like Hume Kant thinks that our notions of cause and effect cannot be applied outside experience or to anything beyond the realm of sensible nature. But he offers an additional reason for denying validity to all *a posteriori* reasoning concerning God's existence. It imposes upon us, he says, an old argument in a new dress, and appeals to the agreement of two witnesses, the one with the credentials of pure reason and the other with those of empiricism while in fact it is only the former who has changed his dress and voice.

The principle of the argument from the contingency of the world or its parts Kant states as follows. If something exists an absolutely necessary being must likewise exist. One premise in the argument namely that contingent things exist has its foundation in experience and therefore Kant admits that the reasoning is not completely *a priori* or ontological. But in order to complete the proof he thinks it must be shown that an *ens realissimum* or most perfect being is the same as an absolutely necessary being in order for the obtained conclusion (*a necessary being exists*) to be translated into the conclusion desired (*Cod exists*).

That an *ens realissimum* must possess the additional attribute of absolute necessity—or in other words that a perfect being is identical

thing we see hear feel or any wise perceive by sense he writes must have some other cause than our own will and is therefore a sign or effect of the power of God To the unthinking herd who claim that they cannot see God Berkeley replies that God is intimately present to our minds producing in them all that variety of ideas or sensations which continually affect us

The existence of any idea in us is for Berkeley ground for asserting God's existence and power as its cause But for Descartes one idea alone becomes the basis of such an inference He supplements his *a priori* or ontological argument with what he calls an *a posteriori* demonstration of God's existence from the mere fact that the idea of God exists in us

That he is himself imperfect Descartes knows from the fact that he doubts Even when doubting leads to knowledge his knowledge is imperfect an infallible token of which he says is the fact that my knowledge increases little by little But the idea which he has of God he declares is that of an absolutely perfect being in whom there is nothing merely potential but in whom all is present really and actually On the principle that there cannot be more reality or perfection in the effect than in the cause Descartes concludes that his own imperfect mind cannot be the cause of the idea of a perfect being The idea that I possess of a being more perfect than I he writes must necessarily have been placed in me by a being which is really more perfect

The radical imperfection of man and indeed of all creation offers Augustine still another proof for God's existence which he attributes to the Platonists They have seen he writes that whatever is changeable is not the most high God and therefore they have transcended every soul and all changeable spirits in seeking the supreme They have seen also that in every changeable thing the form which makes it that which it is whatever be its mode or *modus* we can only be through Him who truly is because He is unchangeable And therefore whether we consider the whole body of the world its figure qualities and orderly movement and also all the bodies which are in it or whether we consider all life either that

which nourishes and maintains as the life of trees or that which besides this has also sensation as the life of beasts or that which adds to all these intelligence as the life of man or that which does not need the support of nutriment but only maintains feels understands as the life of angels—all can only be through Him who absolutely is For to Him it is not one thing to be and another to live as though He could be not living nor is it to Him one thing to live and another to understand as though He could live not understand nor is it to Him one thing to understand another to be blessed as though He could understand and not be blessed But to Him to live to understand to be blessed are to be They have understood from this unchangeableness and this simplicity that all things must have been made by Him and that He could Himself have been made by none

The variety of arguments we have so far examined seems to fit the five ways in which according to Aquinas the existence of God can be proved *a posteriori* The first and most manifest way is the argument from motion which Aquinas attributes to Aristotle The second way is from the nature of an efficient cause Berkeley's argument or Locke's would seem in some respects to offset a version of this mode of reasoning The third way is taken from possibility and necessity and seems to develop the argument from potentiality in Aristotle's Metaphysics and to contain the inference from mutability and contingency which is implicit in the argument attributed to the Platonists by Augustine The fourth way is taken from the gradation to be found in things Proceeding from the existence of the imperfect to absolute perfection it resembles in principle the reasoning of Descartes concerning the perfection in the cause relative to the perfection in the effect The fifth way is taken from the governance of the world—from the fact that everything acts for an end—and so is like the argument which Newton offers from final causes and the existence of order in the universe

These five ways may or may not be regarded as an exhaustive list of the *a posteriori* proofs It may even be questioned whether the five ways are logically distinct and independ-

case of all nature & trace from nature itself and containing the principle of this connexion, namely, of the exact harmony of happiness with morality. That is why Kant explains, "it is morally necessary, to assume the existence of God."

In the tradition of the great books, the common ground shared by reason and faith is marked by the convergence of the contributions made by pagan Jew and Christian—and by poets, philosophers and theologians—to the problem of God's essence and the understanding of the divine nature—the essence of God and His attributes.

Certain attributes of God such as simplicity, immateriality, eternity, infinity, perfection, and glory are usually regarded as so many different ways in which the human understanding apprehends the divine nature in itself. Other attributes, such as the divine causality, omniscience, omnipresence, omniscience, love, justice, and mercy, are usually taken as ways of considering God's nature in relation to the world or to creatures. But to divide the attributes in this way, as is done in the Outline of Topics, is to make a division which cannot be fully justified except in terms of convenience for our understanding. God's will, for example no less than God's intellect, can be considered in relation to Himself. God's intellect, no less than God's will, can have the world for its object. So, too, the divine goodness can be considered with reference to things, even as God's love can be considered with reference to Himself.

The difficulties we meet in classifying or ordering the attributes of God confirm the opinion of almost all theologians, that our understanding is inadequate to comprehend the essence of God. The fact that we employ a multiplicity of attributes to represent to ourselves what in itself is an absolute unity is another indication of the same point. The one attribute of *simplicity* would seem to deny us the right to name others, unless we take the plurality of attributes to signify something about man's understanding of God rather than a real plurality in the divine nature.

"He that will attribute to God" Hobbes writes, "nothing, but what is warranted by

natural reason must either use such negative attributes, as *e. f. m.* *eternal incomprehensibility* or superlatives, as *most but most great* and the like or indefinite as *good just holy creator* and in such sense as if he meant not to declare what He is (for that were to circumscribe Him within the limits of our fancy) but how much we admire Him and how ready we would be to obey Him which is a sign of humility and of a will to honor Him as much as we can for there is but one name to signify our conception of His nature, and that is, I AM, and but one name of His relation to us, and that is GOD in which is contained Father, King and Lord."

Even when they are discussed by the philosophers and reflected on by the poets, certain matters belong especially to theology because they constitute the dogmas of religion—articles of religious faith based solely on divine revelation not discovered by human inquiry or speculation. That God created the world out of nothing and of His free will that the world had a beginning, and will have an end are for example dogmas of traditional Judaism and Christianity. Philosophers may argue about the freedom or necessity of the creative act or about the possibility of a beginning or an end to time and the world but Jewish and Christian theologians find in Sacred Scripture the warrant for believing that which may not be thoroughly intelligible to reason, much less demonstrable by it. What is true of creation applies generally to the religious belief in divine Providence and the positive commandments of God to the gift of grace which God bestows upon men and to the performance of miracles.

Judaism and Christianity share certain dogmas, though the degree to which Jewish and Christian theologians commonly understand what is apparently the same dogma varies from great similarity of interpretation (as in the case of creation and providence) to differences so great (as, for example with regard to grace) that there may be some doubt whether the dogma in question is really the same. The line of demarcation between these faiths would seem to be more easily determined than their common ground yet even here such matters as the resurrection of the body—even when we take differences of interpretation into account—may be regarded as a dogma shared by both

with one which necessarily exists—i according to Kant exactly what was maintained in the ontological argument Hence he maintains that the argument from contingency is invalid because it cannot avoid including what is for Kant the invalid premise of the ontological argument as the real ground of its disguised and illusory reasoning

THE CONTROVERSY concerning the proof of God's existence raises issues in logic in metaphysics and physics and in the theory of knowledge Philosophers are opposed on the question whether a valid demonstration is possible Those who think it possible differ from one another on the way in which the proof should be constructed Those who think it impossible do not always go to the opposite extreme of making the affirmation of God's existence a matter of faith or of denying with the skeptic that we can have any light on the question at all Pascal and Kant for example reject the theoretic arguments as inconclusive or untenable but they do not think the problem is totally insoluble They offer instead practical grounds or reasons for accepting God's existence

The metaphysical proofs of God are so remote from the reasoning of men Pascal asserts and so complicated that they make little impression He will not undertake he tells us in his *Pensees* to prove by natural reasons the existence of God In his view

there are only three kinds of persons those who serve God having found Him others who are occupied in seeking Him not having found Him while the remainder live without seeking Him and without having found Him Since he regards the first as reasonable and happy the last as foolish and unhappy he addresses himself to the middle group whom he regards as unhappy and reasonable

He asks them to consider whether God is or is not Reason can decide nothing here he says If a choice is to be made by reason it must be in the form of a wager Which will you choose then Let us see Since you must choose let us see which interests you least You have two things to lose the true and the good and two things to stake your reason and your will your knowledge and your happiness and your

nature has two things to shun error and misery Your reason is no more shocked in choosing one rather than another since you must of necessity choose This is one point settled But your happiness Let us weigh the gain and the loss in wagering that God is Let us estimate these two chances If you gain you gain all if you lose you lose nothing Wager then without hesitation that He is

We are incapable of knowing either that God is or what God is according to Pascal because if there is a God He is infinitely incomprehensible and has no affinity to us Nevertheless proceeding on the practical level of the wager reason may lead to Christian faith yet not in such a way as to give adequate reasons for that belief since Christians profess a religion for which they cannot give a reason

Kant also makes the affirmation of God a matter of faith but for him it is a purely rational faith since pure reason is the sole source from which it springs He defines a matter of faith as any object which cannot be known through the speculative use of reason but which must be thought *a priori* either as consequences or as grounds if pure practical reason is to be used as duty commands Such is the *summum bonum* he says which has to be realized in the world through freedom This effect which is commanded together with the only conditions on which its possibility is conceivable by us namely the existence of God and the immortality of the soul are matters of faith and are of all objects the only ones that can be so called

For Kant then the existence of God is a postulate of pure practical reason as the necessary condition of the possibility of the *summum bonum* The moral law commands us to seek the highest good with perfect happiness as its concomitant but Kant thinks that

there is not the slightest ground in the moral law for a necessary connexion between morality and proportionate happiness in a being that belongs to the world is a part of it Since man is a part of the world or nature and dependent on it he cannot by his will be a cause of this nature nor by his own power make it thoroughly harmonize is far as his happiness is concerned with his practical principles The only possible solution lies in the existence of a

The basic differences between Jewish and Christian theology center of course on the issue between a unitarian and a trinitarian conception of the Godhead with immediate consequences for disbelief or belief in Christ as the incarnate second person of the Trinity—the Word become flesh. This in turn has consequences for doctrines of salvation and of the nature and mission of the church, its rituals and its sacraments. Even within Christianity however there have been and still are serious doctrinal differences on all these matters. The most fundamental heresies and schisms of early Christianity concerned the understanding of the Trinity and the Incarnation. The great modern schism which divided Christendom arose from issues about the sacraments, the organization and practices of the church and the conditions of salvation.

It would seem to be just as easy to say what beliefs are common to religious Jews and Christians as to articulate the faith common to all sects of Christianity. If all varieties of Protestant doctrine are included little remains in common except belief in the God of Abraham, Isaac and Jacob—creator and provider, governor and judge, dispenser of rewards and punishments.

ONE BOOK STANDS OUT from all the rest because in our tradition it is—as the use of Bible for its proper name implies—the book about God and man. For those who have faith Holy Writ or Sacred Scripture is the revealed Word of God. Its division into Old and New Testaments represents the historic relation of the Jewish and Christian religions.

Without prejudice to the issue between belief and unbelief or between Jewish and Chris-

tian faith we have attempted to organize the references to specifically religious doctrines concerning God and His creatures according to their origin and foundation in either the Old or in the New Testament or in both. On certain points as we have already seen the line of distinction can be clearly drawn. For example the doctrines of God's covenant with Israel of the Chosen People of the Temple and the Torah are indisputably drawn from the Old Testament and from the New Testament come such dogmas as those concerning Christ's divinity and humanity, the Virgin Birth, the Church is the mystical body of Christ and the seven sacraments.

Under all these topics we have assembled passages from the Bible, interpretations of them by the theologians and materials from the great books of poetry and history, philosophy and science. Since the criterion of relevance here is the reflection of sacred or religious doctrine in secular literature the writings of pagan antiquity are necessarily excluded though they are included in the more philosophical topics of theology such as the existence and nature of one God.

Despite its length this chapter by no means exhausts the discussion of God in the great books. The long list of Cross References which follows the seventy three topics comprising the Reference section of this chapter indicates the various ways in which the idea of God occurs in the topics of other chapters. The reader will find that list useful not only as an index on of the topics in other chapters which elaborate on or extend the discussion of matters treated here but also as a guide to other introductions in which he is likely to find the conception of God a relevant part of the examination of some other great idea.

### OUTLINE OF TOPICS

1 The polytheistic conception of the supernatural order	r 561
1a The nature and existence of the gods	561
1b The hierarchy of the gods their relation to one another	562
1c The intervention of the gods in the affairs of men their judgment of the deserts of men	562

2 The existence of one God	
2a The revelation of one God	564
2b The evidences and proofs of God's existence	
2c Criticisms of the proofs of God's existence agnosticism	
2d The postulation of God practical grounds for belief	565
3 Man's relation to God or the gods	
3a The fear of God or the gods	
3b The reproach or defiance of God or the gods	566
3c The love of God or the gods	567
3d Obedience to God or the gods	
3e The worship of God or the gods prayer propitiation sacrifice	568
3f The imitation of God or the gods the divine element in human nature the deification of men man as the image of God	569
4 The divine nature in itself the divine attributes	570
4a The identity of essence and existence in God the necessity of a being whose essence involves its existence	571
4b The unity and simplicity of the divine nature	
4c The immortality of God	572
4d The eternity and immutability of God	
4e The infinity of God the freedom of an infinite being	573
4f The perfection or goodness of God	
4g The intellect of God	574
4h The happiness and glory of God	
5 The divine nature in relation to the world or creatures	575
5a God as first and as exemplar cause the relation of divine to natural causation	
5b God as final cause the motion of all things toward God	576
5c The power of God the divine omnipotence	577
5d The immanence of God the divine omnipresence	578
5e The transcendence of God the divine aseity	
5f God's knowledge the divine omniscience the divine ideas	579
5g God's will divine choice	580
5h God's love the diffusion of the divine goodness	
5i Divine justice and merit divine rewards and punishments	581
6 Man's knowledge of God	583
6a The names of God the metaphorical and symbolic representations of God the anthropomorphic conception of God	
6b Natural knowledge the use of analogies the evidences of nature the light of reason	584

6c Supernatural knowledge	58
(1) God as teacher inspiration and revelation	58
(2) The light of faith	58
(3) Mystical experience	58

<b>11 The denial of God as completely transcending the world or nature the position of the pantheist</b>	<b>60</b>
<b>12 The denial of a revealed and providential God the position of the deist</b>	<b>60</b>
<b>13 God as a conception invented by man its emotional basis</b>	<b>60</b>
<b>14 The worship of false gods deification and idolatry</b>	<b>60</b>

## REFERENCES

To find the passus cited, use the numbers in heavy type which are the volume and page numbers of the passus referred to. For example in 4 *Hom. Ilad.* xii [ 65 S3] 12d, the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

**P**AGE **SIDE** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 *J. M. F. Psychol.* gr 116a 119b the passage begins in the upper half of pag. 116 and ends in the lower half of pag. 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of page, the letters c and d to the upper and lower halves of the right hand side of the page. For example, in 7 *PLATO Symposium* 163b-164c, the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of pag. 164.

**ARTICLES** DIVISIONS One or more of the main divisions of a work (such as PART, CH. etc.) are sometimes included in the reference. In some books, in brackets, are given in certain cases *g. Ibad. BK 1 [ 6, 23]* 12d.

**BIBLE REFERENCES** The references are to book chapter and verse. When the King James and Douay version differ in the books or in the numbering of chapters or verses, the King James version is cited first and the Douay cited by a (D) follows, e.g. Old Testament Nehemiah 7:43-(D) II Kings 1:46

**SECTIONALS** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference. Passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style for general guidance in the use of *The Great Index*; consult the Preface.

# Chapter 30 GOOD AND EVIL

## INTRODUCTION

THE theory of good and evil crosses the boundaries of many sciences or subject matters. It occupies a place in metaphysics. It is of fundamental importance in all the moral sciences—ethics, economics, politics, jurisprudence. It appears in all the descriptive sciences of human behavior such as psychology and sociology, though there it is of less importance and is differently treated.

The relation of good and evil to truth and falsity, beauty and ugliness, carries the discussion into logic, aesthetics, and the philosophy of art. The true it has been said is the good in the sphere of our thinking. So it may be said of the beautiful that it is a quality which things have when they are good as objects of contemplation and love or good as productions. It is no less possible to understand goodness and beauty in terms of truth or truth and goodness in terms of beauty.

On aim of analysis, with respect to the true, the good and the beautiful is to preserve their distinctness without rendering each less universal. This has been attempted by writers who treat these three terms as having a kind of parallelism in their application to everything but who also insist that each of the three notions conceives things under a different aspect or in a different relation. As good adds to being, the notion of the desirable. Aquinas writes, "so the true adds a relation to the intellect; and it is also said that the end of the appetite namely good is in the desirable thing whereas the end of the intellect namely the true is in the intellect itself."

In that part of theology which goes beyond metaphysics and moral philosophy we meet with the concept of infinite goodness—the goodness of an infinite being—and we then face the problem of how God's goodness is to be understood by man. The basic terms of moral

theology—righteousness and sin, salvation and damnation—are, like virtue and vice, happiness and misery, conceptions of good and evil in the condition of man. Their special theological significance comes from the fact that they consider the goodness or evil of man in terms of his relation to God. But the theological problem which is traditionally called "the problem of evil" concerns the whole universe in its relation to the divine perfection.

That problem which is further discussed in the chapter on World can be formulated in a number of ways. How are we to understand the existence of evil in a world created by a God who is omnipotent and perfectly good? Since God is good and since everything which happens is within God's power, how can we account for the sin of Satan or the fall of man with all the evil consequent thereupon without limiting God's power or absolving the erring creature from responsibility? Can it be said that this is the best of all possible worlds if it is also true that this world is far from perfectly good and if at certain theologists hold God could make other things, or add something to the present creation, and then there would be another and a better universe?

The contemporary discussion of good and evil draws its terminology from economics rather than theology. The word value has almost replaced good and evil. What in other centuries were the various moral sciences are now treated as parts of the general theory of value. The substitution of value for good or of "value judgment" for "moral judgment" reflects the influence of economics.

According to Marx, Aristotle was the first to analyse "the form of value." As indicated in the chapter on Wealth, economics at its origin was treated by Aristotle, along with eth-

ics and politics as a moral discipline. But he made it subordinate to them because it dealt not with the whole of human welfare but only with wealth—one of the goods.

In the modern development of economics the word *goods* comes to have a special significance. It refers to commodities or utilities as in the phrase *goods and services*. More generally anything which is useful or exchangeable has the character of an economic good. This general sense is usually conveyed by the economist's use of the word *value*. According to Adam Smith the word *value* has two different meanings and sometimes expresses the utility of some particular object and sometimes the power of purchasing other goods which the possessor of that object conveys. These two meanings are distinguished as *value in use* and *value in exchange*. Marx accepts this distinction but thinks that there is a more fundamental notion of value. He thinks it is possible to abstract from both use-value and exchange value and to discover the underlying property which gives value to all exchangeable things namely that they are products of labor.

With Smith and Marx as with Aristotle the theory of value does not deal with every type of good but only with that type which earlier moralists called external goods or goods of fortune. But more recently the concept of value has been extended by economists and others to the evaluation of everything which men think of as desirable in any way. In consequence the age old controversy about the objectivity or subjectivity of good and evil is now stated in terms of the difference between facts and values or between judgments of fact and judgments of value.

The issue as currently stated is whether questions of value can be answered in the same way as questions of fact. One position maintains that unlike questions of fact which can be answered by scientific investigation and can be objectively solved questions of value elicit no more than expressions of opinion relative to the individual's subjective response or to the conventions of his society at a given time. The other side of the issue is held by those who insist that the norms of value are as objective and as scientifically determinable as the criteria of fact or existence.

The word *value* does not change the problem in any way for what does evaluating any thing mean except judging it as good or bad better or worse? The problem which has a history as long as the tradition of the great books is the problem of how we can defend such judgments and what they signify about the things judged. Are good and evil determined by nature or convention? Are they objects of knowledge or opinion?

The title of an essay by Montaigne—that the taste for good and evil depends in good part upon the opinion we have of them—indicates one set of answers to these questions.

If evils have no admission into us he writes, but by the judgment we ourselves make of them it should seem that it is then in our power to despise them or to turn them to good.

If what we call evil and torment is neither evil nor torment of itself but only that our fancy gives it that quality it is in us to change it. Echoing Montaigne Hamlet remarks that there is nothing either good or bad but thinking makes it so. The Greek sophists centuries earlier appear to take the same view. The statement of Protagoras that man is the measure of all things. Plato thinks does not significantly apply to all things but only to such things as the good or the right the true or the beautiful. In the *Theaetetus* Protagoras is made to say that as to the sick man his food appears to be bitter and to the healthy man the opposite of bitter so in general men estimate or judge all things according to their own condition and the way things affect them. This theory of good and evil necessarily denies the possibility of moral science. Socrates calls it a high argument in which all things are said to be relative.

Plato and Aristotle respond to the sophists by arguing in the opposite vein. For Plato the good is not a matter of opinion but an object of knowledge. Knowledge of good and evil is the best fruit of the tree of knowledge. Let each one of us leave every other kind of knowledge. Socrates says at the end of the *Republic*, and seek and follow one thing only that is, to learn and discern between good and evil."

Aristotle does not think that ethics or any science which deals with good and evil can have as much precision as mathematics. Our discuss-

you will be adequate he writes if it has a much clearness as the subject matter admits of for precision is not to be sought for alike in all discussions. This however does not exclude the possibility of our knowing with great exactitude the first principles of moral science such as the nature of happiness and virtue. In definiteness and even a certain kind of relativity occurs only when these principles are applied to particular cases. Hence in Aristotle's view the moral sciences such as ethics and politics can have objective and universal validity no less than physics or mathematics at least on the level of principles.

In modern times Locke and Kant also affirm the scientific character of ethics but without the qualification which Aristotle insists upon when we go from principles to practice. Locke explains the grounds on which he is bold to think that morality is capable of demonstration as well as mathematics for he says the precise real essence of the things moral words stand for may be perfectly known and so the congruity and incongruity of the things themselves may be certainly discovered in such complete perfect knowledge. He is confident that from self evident propositions by necessary consequences as uncontested as those in mathematics the measures of right and wrong may be made out to any one that will apply himself with the same indifference and attention to the one as he does to the other of these sciences. But Locke adds this is not to be expected whilst the desire of esteem riches or power makes man espouse the well endowed opinions in fashion. He himself seems to tend to the opposite direction when he identifies the good with the pleasant and makes it relative to individual desires.

For Kant the two major parts of philosophy—physics and ethics—are on equal footing, the one concerned with the laws of nature, the other with the laws of freedom. In each case there is both empirical and a priori knowledge. Kant calls the latter in each case metaphysics and speaks of a metaphysic of nature and a metaphysic of morals. The nature of science he thinks, requires us to separate the empirical from the rational part and prefix to physics proper (or empirical physics) a metaphysic of nature and to practical anthropology a meta-

physic of morals which must be carefully cleared of everything empirical.

This partial inventory of thinkers who stand against skepticism or relativism in the field of morals indicates that agreement on this point is accompanied by some disagreement about the reasons for holding what appears to be the same view. The opposite view seems also to be shared by thinkers of quite different cast such as Spinoza and Mill who differ from each other as well as from Montaigne and the ancient sophists.

The terms good and evil Spinoza writes indicate nothing positive in things considered in themselves nor are they anything else than modes of thought. One and the same thing may at the same time be both good and evil or indifferent—according to the person who makes the judgment of it. Spinoza therefore defines good as that which we certainly know is useful to us. Apart from society he says there is nothing which by universal consent is good or evil since everyone in a natural state consults only his own profit. Only when men live together in a civil society under law can it be decided by universal consent what is good and what is evil.

Holding that all men seek happiness and that they determine what is good and evil in particular cases by reference to this end Mill seems to offer the standard of utility as an objective principle of morality. But insofar as he identifies happiness with a sum total of pleasures or satisfactions it tends to become relative to the individual or the group. If competent judges disagree concerning which of two pleasures is the greater or higher there can be no appeal. Mill says except to the verdict of the majority. To this extent at least judgments of value are expressions of opinion not determinations of science. Nor does Mill hesitate to say that the ultimate sanction of all morality is a subjective feeling in our minds.

IN ORDER TO clarify this basic issue it is necessary to take note of other terms which are usually involved in the discussion of good and evil—such terms as pleasure and pain, desire and aversion, nature and reason. In the course of doing this we will perceive the relevance of the chapters which deal with those ideas.

ics and politics as a moral discipline But he made it subordinate to them because it dealt not with the whole of human welfare but only with wealth—one of the goods

In the modern development of economics the word goods comes to have a special significance It refers to commodities or utilities as in the phrase goods and services More generally anything which is useful or exchangeable has the character of an economic good This general sense is usually conveyed by the economist's use of the word value According to Adam Smith the word *value* has two different meanings and sometimes expresses the utility of some particular object and sometimes the power of purchasing other goods which the possessor of that object conveys These two meanings are distinguished as value in use and value in exchange Marx accepts this distinction but thinks that there is a more fundamental notion of value He thinks it is possible to abstract from both use-value and exchange value and to discover the underlying property which gives value to all exchangeable things namely that they are products of labor

With Smith and Marx as with Aristotle the theory of value does not deal with every type of good but only with that type which earlier moralists called external goods or goods of fortune But more recently the concept of value has been extended by economists and others to the evaluation of everything which men think of as desirable in any way In consequence the age old controversy about the objectivity or subjectivity of good and evil is now stated in terms of the difference between facts and values or between judgments of fact and judgments of value

The issue as currently stated is whether questions of value can be answered in the same way as questions of fact One position maintains that unlike questions of fact which can be answered by scientific investigation and can be objectively solved questions of value elicit no more than expressions of opinion relative to the individual's subjective response or to the conventions of his society at a given time The other side of the issue is held by those who insist that the norms of value are as objective and as scientifically determinable as the criteria of fact or existence

THE WORD VALUE does not change the problem in any way for what does evaluating anything mean except judging it as good or bad better or worse? The problem which has a history as long as the tradition of the great books is the problem of how we can defend such judgments and what they signify about the things judged Are good and evil determined by nature or convention? Are they objects of knowledge or opinion?

The title of an essay by Montaigne—that the taste for good and evil depends in good part upon the opinion we have of them—indicates one set of answers to these questions.

If evils have no admission into us he writes, but by the judgment we ourselves make of them it should seem that it is then in our power to despise them or to turn them to good

If what we call evil and torment is neither evil nor torment of itself but only that our fancy gives it that quality it is in us to change it Echoing Montaigne Hamlet remarks that there is nothing either good or bad but thinking makes it so The Greek sophists centuries earlier appear to take the same view The statement of Protagoras that man is the measure of all things Plato thinks does not significantly apply to all things but only to such things as the good or the right the true or the beautiful In the *Theaetetus* Protagoras is made to say that as to the sick man his food appears to be bitter and to the healthy man the opposite of bitter so in general men estimate or judge all things according to their own condition and the way things affect them This theory of good and evil necessarily denies the possibility of moral science Socrates calls it a high argument in which all things are said to be relative

THE WORD VALUE does not change the problem in any way for what does evaluating anything mean except judging it as good or bad better or worse? The problem which has a history as long as the tradition of the great books, is the problem of how we can defend such judgments and what they signify about the things judged Are good and evil determined by nature or convention? Are they objects of knowledge or opinion?

The title of an essay by Montaigne—that the taste for good and evil depends in good part upon the opinion we have of them—in indicates one set of answers to these questions If evils have no admission into us he writes, but by the judgment we ourselves make of them it should seem that it is then in our power to despise them or to turn them to good.

If what we call evil and torment is neither evil nor torment of itself but only that our fancy gives it that quality it is in us to change it Echoing Montaigne Hamlet remarks that there is nothing either good or bad but thinking makes it so The Greek sophists centuries earlier appear to take the same view The statement of Protagoras that man is the measure of all things Plato thinks does not significantly apply to all things but only to such things as the good or the right the true or the beautiful In the *Theaetetus* Protagoras is made to say that as to the sick man his food appears to be bitter and to the healthy man the opposite of bitter so in general men estimate or judge all things according to their own condition and the way things affect them This theory of good and evil necessarily denies the possibility of moral science Socrates calls it a high argument in which all things are said to be relative

Plato and Aristotle respond to the sophists by arguing in the opposite vein For Plato the good is not a matter of opinion but an object of knowledge Knowledge of good and evil is the best fruit of the tree of knowledge Let each one of us leave every other kind of knowledge Socrates says at the end of the *Republic* and seek and follow one thing only that is, to learn and discern between good and evil

Aristotle does not think that ethics or any science which deals with good and evil can have as much precision as mathematics Our discus-

problem of the objective and the subjective good. The apparent good varies from individual to individual and from time to time. If there were a real good, it would be free from such relativity and variability. Unless there are real as distinct from merely apparent goods, man's desire cannot distinguish between what men should desire and what in fact they do desire.

As moral science deals with human behavior its province can be separated from that of other sciences which treat the same subject matter—such as psychology and sociology—but in terms of a different treatment of that same matter. Moral science must be normative or prescriptive rather than descriptive. It cannot measure what men should seek, nor what they do seek. The very existence of normative sciences, as well as their validity, would thus seem to depend on the establishment of a real, as opposed to a merely apparent, good.

This area is no special difficulty for moralists who think that man knows what is really good for him, both in general and in particular by use of reason or rational deduction, through the commandments of the divine law or through the precepts of the law of reason. But for those who insist that the good is always somehow relative to desire and always involves pleasure, the distinction between the real and the apparent good rises an extremely difficult problem.

To say that an apparent good is not really good suggests, as we have seen, that what is called good may not be in itself desirable. That something which is really good may not in fact appear to be so, seems to imply that the word "good" can be significantly applied to something which is not actually desired—at least not consciously. How then, is the good also relative to desire? The traditional answer to this question must appeal to the distinction between natural and conscious desire which is discussed in the chapter on Desire. It is by reference to natural desire that the good is said to be in itself always desirable—even when the really good thing is not consciously desired.

The relation of good and evil to pleasure and pain can also be clarified by a basic distinction between the pleasure which is an object of de-

sire and pleasure conceived as the satisfaction of desire. This is discussed in the chapter on PLEASURE AND PAIN. If obtaining a desired good is satisfying, then there is certainly a sense in which the good and the pleasure (or the satisfaction) are always associated, but it may also be true that pleasure is only one kind of good among various objects of desire and that certain pleasures which men desire appear to be but are not really good.

The foregoing considerations apply to the good in the sphere of human conduct. But the human good, the procurable good, the good for man does not exhaust the meaning of the term good. The idea of the good is, for Plato, the measure of perfection in all things; it is "not only the author of Knowledge to all things known but of their being and essence and yet the good is not essence but far exceed essence in dignity and power."

The absolute good is also, as in the *Dante* Comedy, the final cause or ultimate end of the motions of the universe. It is "the Alpha and Omega." Dante says, "of every scripture that God reads to me—the Essence wherein is such supremacy that every good which is found outside of it is now but else than a beam of its own radiance—the Love which moves the sun and the other stars."

So too, in Aristotle's cosmology, the circular motions of the celestial spheres, and through them all other cycles of natural change, are sustained eternally by the prime mover which moves all things by the attraction of its perfect being. It therefore "moves without being moved" for it produces motion through being loved."

Though desire and love enter into the conception of the good as a cosmic final cause they are not known desire or love. Though the goodness which abides in things according to the decree of their perfection may make them desirable, it is not dependent on their being consciously desired by men.

In Jewish and Christian theism—for example the goodness of God is in no way measured by human desires, purposes, or pleasures nor is the goodness of created things which, according to Genesis, God surveyed and found "very good." The order of creation, moreover,

It has been said for example that the good is identical with the pleasant that the good is what men desire that the good is a property of being or existence that the good is that which conforms to the nature of a thing that the good is that which is approved by reason. It is possible to see some truth in each of these statements. But each taken by itself may be too great a simplification. Searching questions can be asked by those who refuse to equate the good with the pleasant or the desirable the real the natural or the reasonable. Are there no pleasures in any way bad no pains in any way good? Are all desires themselves good, or are all equally good? How does calling a thing good add anything to its being or existence? Does not evil exist or qualify existence? By what standards can the natural and the rational be judged good if the good is that which conforms to nature and reason?

These questions call for more analysis of each of these factors in the discussion of good and evil and suggest that no one of these factors by itself is sufficient to solve the problem of defining good and evil or formulating their criteria. Of the five things mentioned two particularly—pleasure and desire—seem to leave open the question whether good and evil are objective or subjective. They require us to decide whether things please us because they are good or are good because they please us whether we desire things because they are good or simply call them good when we desire them. On this issue Spinoza flatly declares that we do not desire a thing because we adjudge it good but on the contrary we call it good because we desire it. In saying that a thing is good so far as it is desirable Aquinas takes the opposite position for according to him a thing is desirable only in so far as it is perfect. It can be desirable therefore without being actually desired by this or that individual.

The other three terms—unlike pleasure and desire—seem to favor the objectivity of good and evil at least for those who regard the order of existence the nature of things and the laws of reason as independent of our desires or preferences. Thus for Spinoza the nature of man and his reason seem to provide an objective standard for determining what is good alike for all men. Nothing he writes can be good ex-

cept in so far as it agrees with our nature and therefore the more an object agrees with our nature the more profitable it will be. And in another place he says By good I understand everything which we are certain is a means by which we may approach nearer and nearer to the model of human nature we set before us. That model he tells us is the man of reason the man who always acts according to the dictates of reason for those desires which are determined by man's power or reason are always good.

Nevertheless if desire and pleasure cannot be eliminated from the consideration of good and evil—at least not the good and evil which enter into human life—then the problem of finding a purely objective foundation for our moral judgments is not solved simply by an appeal to being nature and reason.

Some help toward a solution may be found in one often reiterated fact about the relation between the good and human desire. The ancients insist that no man desires anything but what at the time seems good to him in some way. No man Socrates observes voluntarily pursues evil or that which he thinks to be evil. To prefer evil to good is not in human nature and when a man is compelled to choose one of two evils no one will choose the greater when he may have the less. This however does not prevent men from desiring what they suppose to be goods although they are really evils. Since they are mistaken in their judgment and suppose the evils to be goods they really desire goods.

The object consciously desired is always at least apparently good. When men are mistaken in their estimate of things as beneficial or injurious to themselves the apparent good—the good actually desired—will be really an evil that is something actually undesirable. An object which is really good may not appear to be so and so it will not be desired although it is desirable. The deception of appearances Socrates says tricks us into taking at one time the things of which we repent at another both in our actions and in our choice of things great and small.

The distinction between the real and the apparent good is of course connected with the

reference to the general inclinations and wants of mankind has a *moral value* whereas that ever is above all value and therefore admits of no equivalent has a dignity — not a merely relative worth but an intrinsic worth.

But since Kant thinks that only men or rational beings, can have intrinsic worth he finds goodness only in the moral order. He agrees with the Stoics that good and evil occur only in the realm of freedom, not at all in the realm of existence or nature. Good or evil he writes, always implies a reference to the *will* as determined by the law of reason which is the law of freedom. According to Kant nothing can possibly be conceived in the world or even out of it which can be called good without qualification except a Good Will and in another place he says, If anything is to be good or evil absolutely it can only be the manner of *using* the maxim of the will. In this sense the free will complying with or resisting the imperatives of duty is either the seat or the source of all the goodness or evil that there is. Men may laugh Kant says, at the Stoic who in these strict paradoxes of yours erred our Pain however thou tormentest me I will never admit that thou art an evil he was right for pain did not in the least diminish the worth of his person but only that of his condition.

In the sphere of moral conduct and especially for those who make duty or pleasure rather than duty the prime rule there seems to be a plurality of goods which require classification and order.

Some things, it would appear are not desired for themselves but for the sake of something else. They are good only as means to be used. Some things are desired for their own sake and are good in end to be possessed or enjoyed. This division of goods into means and ends—the useful and the enjoyable or pleasant—permits a third type of good which is an end in one respect and a means in another. Analysis of this sort leads to the concept of a *summum bonum*—that good which is not a means in any respect but entirely and the supremely highest good for which all else is sought.

The brief question with respect to the *summum bonum* is whether it is good or the good—whether it is merely one type of good more

desirable than any other or the sum of all good things which when possessed leave nothing to be desired. Aristotle and Mill seem to take the latter view in their conception of happiness as the *summum bonum*. Human nature Mill says is so constituted as to desire nothing which is not either a part of happiness or a means of happiness. Happiness, he insists is not an abstract idea but a concrete whole including all other goods within itself. It is the only good which is desired entirely for its own sake. Aristotle treats virtue and knowledge as intrinsic goods but he also regards them as means to happiness. In Mill's terms their goodness remains subject to the criterion of utility from which happiness alone is exempt since it measures the utility of all other goods.

If the evaluation of all things by reference to their contribution to happiness as the ultimate good constitutes utilitarianism in ethics, then Aristotle no less than Mill is a utilitarian even though Aristotle does not refer to the principle of utility does not identify the good with pleasure and conceives the virtues as intrinsically good not merely as means. Kant would regard them as in fundamental agreement despite all their differences—or at least he would regard them as constituting the same fundamental error.

To Kant any discussion of human conduct which involves the calculation of means to ends is pragmatic or utilitarian even when the controlling end is the *summum bonum* of happiness. Kant makes a sharp distinction between what he calls pragmatical rules of conduct which consider what should be done by one who wishes to be happy and what he regards as the strictly moral or ethical law which has no other motive than the worthiness of being happy. Morality he says in another place is not properly the doctrine of how we should make ourselves happy but how we should become worthy of happiness—through doing our duty.

Kant's criticism of Aristotle's ethics of happiness is therefore applicable to the utilitarianism of Mill and Mill's rejoinder to Kant serves as a defense of Aristotle. This basic issue concerning the primacy of happiness or duty—of desire or law—is discussed in the chapters on DUTY and HAPPINESS where it is suggested

involves a hierarchy of inequalities in being and goodness. Even when each thing is perfect in its kind all things are not equally good according to the differences in their natures diverse kinds are capable of greater or less perfection.

In the metaphysical conception of goodness that which has more actuality either in existence or power has more perfection. God's infinite goodness is therefore said to follow from the fact that he is completely actual—*infinite* in being and power. Things which have life Augustine writes are ranked above those which have none. And among those that have life the sentient are higher than those which have no sensation and among the sentient the intelligent above those that have no intelligence.

Augustine contrasts these gradations of perfection which are according to the order of nature with the standards of value which are according to the utility each man finds in a thing. That which is less good in a metaphysical sense may be preferred on moral grounds as being better for man. Who he asks would not rather have bread in his house than mice gold than fleas? Is it not true that more is often given for a horse than for a slave for a jewel than for a maid?

According to Augustine as well as to Aquinas later metaphysical goodness consists in the value a thing has in itself in the scale of creation while moral goodness depends upon the relation in which a thing stands to human need or desire and according to the estimation placed upon it by human reason. It is in the moral not the metaphysical sense that we speak of a good man a good will a good life and a good society or of all the things such as health wealth pleasure virtue or knowledge which it may be good for man to seek and possess. Only in the metaphysical sense can things be thought of as good entirely apart from man only then can we find a hierarchy of perfections in the world which accords with a hierarchy of beings. Thus Spinoza declares that the perfection of things is to be judged by their nature and power alone nor are they more or less perfect because they delight or offend the human senses or because they are beneficial or prejudicial to human nature.

THE METAPHYSICAL conception of goodness raises peculiarly difficult problems. Are there many meanings of good as there are of being? When we say God is good are we making a moral or a metaphysical judgment? Are we attributing perfection of being or goodness of will to God? If goodness is a property of being then must not all evil become a privation of being? Conceiving evil in this way Augustine points out that if things be deprived of all good they shall cease to be so that there is nothing whatsoever evil in itself and Aquinas maintains that no being is said to be evil considered as being but only so far as it lacks being.

If to understand what the notion of goodness adds to the notion of being it is necessary to say that being has goodness in relation to appetite the question inevitably arises Who appetites? Not man's certainly for then the moral and the metaphysical good become identical. If God's then not appetite in the form of desire but in the form of love for the divine perfection is usually thought to preclude desire.

Problems of this sort confront those who conceiving the good both *apart from* and also *relative to man* are obligated to connect the metaphysical and the moral meanings of good and to say whether they have a common thread. Some writers however limit their consideration to the strictly moral good and deny as do the Stoics goodness or evil to anything but man's free acts of will.

We should says Marcus Aurelius judge only those things which are in our power to be good or bad. In this we are entirely free for things themselves have no natural power to form our judgments. If thou art pained by any external thing it is not this thing which disturbs thee but thy own judgment about it. And it is in thy power to wipe out this judgment now. Suppose that men kill thee cut thee in pieces curse thee. What then can these things do to prevent thy mind from remaining pure wise sober just?

Though Kant develops what he calls a metaphysic of ethics he does not seem to have a metaphysical as opposed to a moral conception of the good unless in some analogous form lies in his distinction between value and dignity according to which whatever has

because they are all of the same nature but most strictly it is a common good if the happiness of each individual cannot be separated from the happiness of all.

Aquinas seems to be using this meaning of common good when in defining law as a rule of conduct directed to the common good he refers not merely to the good of the community or body politic but beyond that to the last end of human life which is happiness or beatitude. Law he says must needs concern itself properly with the order directed to universal happiness. Mill also seems to conceive happiness as a common good in this sense.

What the assailants of utilitarianism seldom have the justice to acknowledge he writes is that the happiness which forms the utilitarian standard of what is right in conduct is not the agent's own happiness but that of all concerned.

The several meanings of the common good are a fundamental issue. Some writers use it in one sense only, rejecting the others. Some not only use the term in all its meanings but also develop a hierarchy of common goods. They regard universal happiness for example as a common good of a higher order than the welfare of the political community. Yet in every order they insist upon the primacy of the common over the individual good. In the political order for example they think the welfare of the community takes precedence over individual happiness. They would regard Adam Smith's statement of the way in which individuals accidentally serve the common good while seeking their private interests as a perversion of the relationship. To say that an individual considering only his own gain is led

by an invisible hand to promote an end which was no part of his intention (i.e. the general prosperity of society) does not excuse the individual's failure to aim at the common good.

The several meanings of the common good also complicate the statement of the issue between those who seem to say that the welfare of the community always takes precedence over individual well-being, or happiness—that the good of the whole is always greater than the good of its parts—and those who seem to say that the state is made for man, not man for the state, or that the prosperity of the society in which men live is good primarily because it enables each of them to live well. This issue which runs through all the great books of political theory from Plato and Aristotle to Hegel and Mill is discussed in the chapters on CITIZEN and STATE.

The opposition between collectivism and individualism in economics and politics does not exhaust the issue which stated in its broadest moral terms is a conflict between self-interest and altruism. The primary problem to consider here is whether the issue is itself genuine or only an opposition between false extremes which needlessly exclude the half-truth that each contains.

The collective aspect of the common good may not need to be emphasized at the expense of its distributive aspect. The good of each man and the good of mankind may be inseparable. It may be the same good which in different respects is individual and common. It may be that no good can be supreme which is not both immanent and transcendent—at once the highest perfection of the individual and a good greater than his whole being and his life.

## OUTLINE OF TOPICS

- |   |     |
|---|-----|
| 1 The general theory of good and evil   | 615 |
| 1 The idea of the good—the notion of finality   | 615 |
| 1b Goodness in proportion to being—the grades of perfection and the goodness of order | 615 |
| 1c The good—the true and the beautiful  | 616 |
| 1d The origin, nature and existence of evil   | 617 |

that in an ethics of duty right and wrong supplant good and evil as the fundamental terms and the *summum bonum* becomes a derivative notion rather than the first principle of morality.

At the other extreme are those who deny duty entirely and with it any meaning to right and wrong as distinct from good and evil. A middle ground is held by those who employ right and wrong as subordinate terms in the analysis of good and evil finding their special significance in the consideration of the good of others or the social good. To do right is to do good to others; to do wrong is to injure them. The question which Plato so insistently raises whether it is better to do injustice or to suffer it can also be stated in terms of good and evil or right and wrong. Is it better to suffer evil or to do it? Is it better to be wronged by others or to wrong them? As justice for Aristotle is that one among the virtues which concerns the good of others and the common good and as it is the one virtue which is thought to involve duty or obligation so the criteria of right and wrong measure the goodness or evil of human acts by reference to law and society.

**THE DIVISION OF GOODS INTO MEANS AND ENDS** is not the only distinction made by moralists who recognize the plurality and inequality of goods.

Goods have been divided into the limited and the unlimited with respect to quantity, the pure and the mixed with respect to quality, sensible and intelligible goods or particular goods and the good in general, external goods, goods of the body and goods of the soul, the pleasant, the useful and the virtuous. More specific enumerations of the variety of goods list wealth, health, strength, beauty, longevity, pleasure, honor (or fame), virtue, knowledge, friendship.

All of the foregoing classifications can be combined with one another but there is one distinction which stands by itself although it affects all the others. That is the distinction between the individual and the common good or between private and public good, the good for this one man and the good of all others and of the whole community. In the language of modern utilitarianism it is the distinction between individual happiness and what Bentham called "the greatest good for the greatest number."

The phrase common good has several meanings in the tradition of the great books. One sense which some think is the least significant refers to that which can be shared or used by many as for example land held in common and worked by a number of persons or families. Thus we speak of the commons of a town or village. This meaning applies particularly to economic goods which may either belong to the community as a whole or be divided into parcels of private property.

Another sense of common good is that in which the welfare of a community is a common good participated in by its members. The welfare of the family or the state is a good which belongs to a multitude organized for some common purpose. If the individual members of the group derive some benefit from their association with one another then the prosperity of the community is not only a common good viewed collectively but also a common good viewed distributively for it is the good of each member of the group as well as of the whole.

With this in mind perhaps Mill speaks of an indissoluble association between [the individual's] happiness and the practice of such mode of conduct negative and positive as regard for the universal happiness prescribes so that not only he may be unable to conceive the possibility of happiness to himself consistently with conduct opposed to the general good but also that a direct impulse to promote the general good may be in every individual one of the habitual modes of action. If this statement by Mill is used to interpret Bentham's phrase—the greatest good for the greatest number—then the greatest number cannot be taken to mean a majority for the good of nothing less than the whole collectively or of all distributively can be taken as the common or general good.

Still another conception of the common good is possible. A good may be common in the sense in which a specific nature is common to the members of the species—not as organized socially in any way but simply as so many like individuals. If all men seek happiness for example, then happiness is a common good even though each individual seeks his own happiness. In a deeper sense it is a common good if the happiness each seeks is the same for all men.

## REFERENCES

To find the passages cited, use the numbers in *bold* type which are the column and page numbers of the passages referred to. For example, in *4. How to find it*, § 112d, the number 4 is the number of the clause in the set; the number 12d indicates that the passage is in section d of part 1.

P. 1 *Section 3*. When the text is printed in one column, the letters a and b refer to the upper and lower half of part *Foreword* c 1033; in *Part*, e.g. 116a 119b, the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left-hand side of the part, the letters c and d to the upper and lower halves of the right-hand side of the part. *For example*, in *Pt. to Syntaxis* c 153b 154c the passage begins in the lower half of the left-hand side of part 153 and ends in the upper half of the right-hand side of page 154.

*Section 4. Divisions*. One or more of the main divisions of a work (such as **PART**, **SECTION**) are sometimes included in the reference. In numbers, in brackets, are given the numbers of the cases, e.g. *I-ii* **ix** *i* **5**; *53* 12d.

B. 1. *Ref. to 1*. The references are to book, chapter and verse. When the King James and Douay versions differ in the number of chapters or verses, the King James version is cited first and the Douay indicated by a (D) following, e.g. Old T. 37a *Mt. 7* *Verbius* 45—(D) *H. Eccl.* 46.

*Section 5. Titles*. The "reference" entry calls the reader's attention to one or more "principal" parts of a whole reference. "passim" signifies that the topic is discussed in several places rather than concentrated in one work or passage cited.

For additional information concerning the style of the references, see the *Explanation of References*; *Style* for general guidance in the use of The Great Books; consult the Preface.

## ADDITIONAL READINGS

Listed below are works not included in the *Great Books of the Western World* but relevant to the  
 idea and topics with which this chapter deal. These works are divided into two groups:

I Works by authors presented in this collection.

II Works by authors not represented in this collection.

To the date places and other facts concerning the publication of the works cited consult  
 the Bibliography of Additional Reading which follows the last chapter of *The Great Ideas*.

# Chapter 31 GOVERNMENT

## INTRODUCTION

THE usual connotation of government is political. The word is often used interchangably with state. But there is government in a university, in an economic corporation, in the church, in any organization of men associated for a common purpose. The theologian speaks of the divine government of the universe, and the moralist speaks of reason as the ruling power in the soul which governs the appetites or passions.

In all these contexts, the notion of government involves the fundamental relations of ruler and ruled, ruled of command and obedience. Though the character of these relationships varies somewhat with the terms related, there is enough common meaning throughout to permit a general consideration of the nature of government. But that is not the way in which government is discussed in the great books. For the most part government is considered in one or another of its special settings—as it functions in the family or the state, in the soul or the universe. The common thread of meaning is noted only indirectly by the way in which comparisons are made or analogies are drawn between the various modes of government.

In view of this we have found it convenient to restrict this chapter to government in the political sense, treating domestic and ecclesiastical government under FAMILY and RELIGION; economic government under WEALTH; divine government in the chapters on GOD and WORLD; and government in the soul in the several chapters which consider the relation of reason to the passions such as DESIRE and EMOTION.

Government and state are often used as if they were interchangeable terms. Some writers differentiate their meanings by using state to signify the political community itself and

government to refer to the way in which it is politically organized. Yet the two concepts tend to fuse in traditional political theory. The kinds of states, for example, are usually named according to their forms of government. The great books speak of monarchical and republican states, as we today speak of the fascist or the democratic state.

Nevertheless, we recognize the distinction between a state and its government when we observe that the state can maintain its historic identity while it undergoes fundamental changes in its form of government. The state is not dissolved by a revolution which replaces a monarchy by a republic, or conversely. There is a sense in which Rome is the same state under the Tarquins, under the Republic, and under the Caesars. In contrast, some revolutions, such as the War of Secession in American history threaten to dissolve the state itself.

Despite the fact that government involves a relation between rulers and ruled, the word is often used to designate one term in that relationship, namely, the rulers. When the citizens of a republic speak of the government, they usually refer to the officialdom—not the body of citizens as a whole, but only those who for a time hold public office. But government can not consist of governors alone any more than education can consist of teachers alone. The different forms of government can be distinguished as readily by looking to the condition of the ruled as to the powers of the rulers. Furthermore, the same individuals may both rule and be ruled by turns, as Aristotle observes of constitutional government.

Though the notion of government includes both rulers and ruled, the word usually appears in political literature with the more restricted meaning. When writers refer to the branches or departments of government or when they

speak of the sovereignty of a government they direct attention to the ruling power and to the division of that power into related parts

**THE GREAT BOOKS** OF political theory ask a number of basic questions about government. What is the origin of government, its nature and necessity? What ends does government serve and how do these ends define its scope and limits? What is the distinction between good and bad government between legitimate and illegitimate or just and unjust government? What are the forms of government of good government of bad government? What are the various departments or branches of government and how should they function with respect to one another?

These questions are related. The origin, nature and necessity of government have a bearing on its ends and limits. These same considerations enter into the discussion of the legitimacy and justice of governments. They also have a bearing on the classification of the forms of government and on the evaluation of diverse forms. The way in which the several branches of government should be related is affected by the way in which the various forms of government differ.

These questions are not always approached in the same order. Some of the great political theorists—for example Hobbes, Locke and Rousseau—find their fundamental principles in the consideration of the origin of government. They start with such questions as: What makes it legitimate for one man to govern another? Is the exercise of political power both justified and limited by the end it serves? In answering these questions they imply or make a distinction between good and bad government and indicate the abuses or corruptions to which government is subject. Though they enumerate the various forms of government in a manner which reflects the traditional classifications, they do not seem to regard that problem as of central importance.

Other eminent political thinkers make the classification and comparison of diverse forms the central problem in the theory of government. Plato and Aristotle, Montesquieu and Mill are primarily concerned with the criteria by which the justice or goodness of a govern-

ment shall be judged. They compare various forms of government as more or less desirable, nearer to the ideal or nearer to the opposite extreme of corruption. In the course of these considerations they answer questions about the necessity, the legitimacy and the ends of government in general.

THERE SEEMS TO BE considerable agreement at one point, namely, that government is necessary for the life of the state. It is generally held by the authors of the great books that no community can dispense with government for without government men cannot live together in peace. None is an anarchist like Thoreau or Kropotkin although Kropotkin claims that *War and Peace* and even Mill's *Essay on Liberty* contain anarchist ideas. Marx and Engels may be the other possible exception to the rule.

If Marx and Engels take the opposite view, they do so simply on the ground that with the advent of a classless society after the communist revolution the class war will come to an end and there will no longer be any need for government. The state can quietly withdraw. But according to Aquinas even if society were free from all injustice and inquiry, even if men lived together in a state of innocence and with the moral perfection they would possess if Adam had not sinned, even then government would be necessary. A social life, he thinks, cannot exist among a number of people unless government is set up to look after the common good.

The great books do not agree about the naturalness of the state. They do not agree about the way in which government originates historically or about the functions it should and should not perform. They do not all reflect in the same way on the good and evil in government. Nor do they all give the same reasons for the necessity of government. In consequence they set different limits to the scope of government and assign it different functions which range from the merely negative function of preventing violence to the duty to provide positively for human welfare in a variety of ways.

On all these things they differ but with the exceptions noted they do concur in thinking that anarchy—the total absence of government—is unsuitable to the nature of man. Also be-

in what he is, any form of government in Darwin's opinion is better than none. Some like Hobbes and Kant identify anarchy with the state of nature which is for them a state of war. Some like Locke think that the state of nature is not a state of war yet find great advantages to living in civil society precisely because government remedies the inconveniences and ills which anarchy breeds. But though they often write as if men could choose between living in a state of nature or in a civil society they do not think man has any opinion with respect to government at if he wishes the benefits of the civilized life. They cannot conceive civil society as existing for a moment without government.

THE GENERAL AGREEMENT about the necessity of government tends to include an agreement about the two basic elements of government—authority and power. No government at all is possible, not even the most attenuated unless men obey its directions or regulations. But one man may obey another either voluntarily or unwillingly—either because he recognises the right of the other to give him commands or because he fears the consequences which he may suffer if he disobeys.

These two modes of obedience correspond to the authority and power of government. Authority elicits voluntary compliance. Power either actually coerces or by threatening, coercion, compels involuntary obedience. Authority and power are the right and might of government. Either can exist and may operate apart from the other but as Rousseau points out when it is lacking government is illegitimate and a Hamilton points out when it is lacking it is ineffective.

In a famous passage the Federalists explain that rule by authority alone can't work in a society of angels. But since men are men not angels, their obedience must be assured by the threat of force. In any society in which some men are good some bad and all may be either at one time or another force is the only expedient to get the unwilling to do what they should do for the common good. Even when the intentions of government have their authority from the consent of the governed they cannot function effectively without the

use of power or force. For this reason Hamilton dismisses the idea of governing at all times by the simple force of law as having no place but in the theories of those political doctors whose sacra dicta disdain the admonitions of experimental instruction.

If authority without force is ineffective for the purposes of government might without right is tyrannical. Whichever law ends, tyranny begins, Locke writes, and whoever in authority exceeds the power given him by the law and makes use of the force he has under his command to compass that upon the subject which the law allows not ceases in that to be a magistrate. The use of unauthorized force may take the form of either usurpation or tyranny. If it is the exercise of power which another hath a right to, Locke declares it is usurpation if it is the exercise of power beyond right which nobody can have a right to, it is tyranny.

The distinction between legitimate rule and all dominations by force rests not on the use of power but on whether the power which must be employed is or is not legally authorized.

THE NOTION OF SOVEREIGNTY involves combinations of authority and power. The word itself is medieval and feudal in origin. It signifies the supremacy of an overlord who owes allegiance to no one and to whom fealty is due from all who hold fiefs under him. Since the supremacy of the sovereign lord is clothed with legal in his, according to the customs of feudal tenure, sovereignty seems to imply the union of power with authority not the use of naked force.

The political philosophers of antiquity do not use the term sovereignty. But the discussion of the distribution of political power is certainly concerned with the possession of authority as well as the control of force. Aristotle's question, for example about "what is to be the supreme power in the state—the multitude? or the wealthy? or the good? or the one best man?" deals with the same problem which modern writers express by asking where sovereignty resides. As Aristotle sees the conflict between the oligarchical and the democratic constitutions the issue concerns the legal definition of the ruling class whether the constitu-

tion puts all the political power in the hands of the rich or in the hands of the freeborn rich and poor alike. It does not seem to be too violent an interpretation for modern translators to use the word *sovereignty* here for *sovereignty can be said to belong to whatever person or class holds the supreme power by law*

Within this meaning of sovereignty the basic difference between absolute and limited government or between the despotic and the constitutional regime leads to a distinction between the sovereign man and the sovereign office.

The ruler who holds sovereignty in his person is an absolute sovereign if his power and authority are in no way limited by positive law. According to some political philosophers sovereignty must be absolute. In the opinion of Hobbes for example the notion of a limited sovereignty seems to be as self contradictory as that of a supremacy which is not supreme.

After discussing the absolute rights which constitute sovereignty Hobbes goes on to say that this great authority being indivisible there is little ground for the opinion of them that say of sovereign kings though they be *singulis maiores* of greater power than every one of their subjects yet they be *universis minores* of less power than them all together. For if by *all together* they mean not the collective body as one person then *all together* and *every one* signify the same and the speech is absurd. But if by *all together* they understand them as one person (which person the sovereign bears) then the power of all together is the same as the sovereign's power and so again the speech is absurd.

It makes no difference Hobbes argues whether the sovereignty is held by one man or by an assembly. In either case the sovereign of a commonwealth is not subject to the civil laws. For having the power to make and repeal laws he may when he pleases free himself from that subjection by repealing those laws that trouble him. The sovereign therefore has absolute power which consists in the absolute right or liberty to do as he pleases for he that is bound to himself only is not bound at all.

Aquinas seems to be taking the same view when he admits that the sovereign is

*exempt from the law as to its coercive power* since properly speaking no man is coerced by himself and law has no coercive power save from the authority of the sovereign. But Aquinas differs from Hobbes in thinking that the authority is not the power of the prince is limited by the constitutional character of the kingly office. In the mediaeval conception of monarchy the king is bound not to himself alone as Hobbes insists but to his subjects. Their oath of allegiance to him is reciprocated by his coronation oath in which he assumes the obligation to uphold the customs of the realm.

WHERE AQUINAS CONCEIVES the sovereign prince as one element—the other being established law—in a government which is therefore both absolute and constitutional Hobbes conceives the sovereign as identical with a government which is wholly absolute. The distinction here implied—between a mixed regime and one that is purely absolute—is more fully discussed in the chapters on *Constitution* and *Morality*. In contrast to both a republic or purely constitutional government substitutes the sovereign office for the sovereign man. It denies the possession of sovereignty to men except in their capacity as office holders.

According to the republican notions of Rousseau not even government itself has sovereignty except as representing the political community as a whole which is the sovereign. Sovereignty he writes is vested in the government simply and solely as a commission an employment in which the rulers mere officials of the Sovereign exercise in their own name the power of which it makes them depositaries. Since this power is not theirs except by delegation it can be limited modified or recovered at pleasure for the alienation of such a thing is incompatible with the nature of the social body and contrary to the end of association.

The unity of sovereignty is not impaired by the fact that a number of men may share in the exercise of sovereign power any more than the unity of government is destroyed by its division into separate departments or branches such as the legislative executive and judicial. Since in a republic the government (in all its branches or offices) derives its power and

authority from the constitution (or what Rousseau calls "the fundamental law"), and since it is the people as a whole not the officials of government who have the constitutive power, the people are in a sense supreme or sovereign.

Popular sovereignty may mean that the people as a whole govern themselves without the services of magistrates of any sort, but this would be possible only in a very small community. It is questionable whether a people has ever exercised sovereignty in this way in any state of historic importance. Popular sovereignty more usually means that is implied by Aquinas when he conceives the magistrate or ruler as merely the vicegerent of the people. "To order anything to the common good," he writes, "belongs either to the whole people or to someone who is the vicegerent of the whole people. Hence the making of a law belongs either to the whole people or to a public personage who has the care of the whole people." Similarly the exercise of coercive force is vested in the whole people or in some public personage to whom it belongs to inflict penalties.

The notion of a *public personage* as Aquinas uses it in these passages, is clearly that of a surrogate for or representative of the whole people. The people as a whole have in the first instance the authority and power to perform all the functions of government. Only if for convenience or some other reason they constitute one or more public personages to act in their stead, do individual men exercise sovereignty and then only as representatives.

Locke's fundamental principle—that men being by nature all free, equal, and independent no one can be put out of this estate and subjected to the political power of another without his own consent—is another expression of the idea of popular sovereignty. It reappears in the Declaration of Independence in the statement that since governments are instituted by men to secure their fundamental rights they must derive "their just powers from the consent of the governed."

Men object to the sense in which men have recently begun to speak of the sovereignty of the people "as something opposed to the sovereignty existent in the monarch. So op-

posed to the sovereignty of the monarch he writes, the sovereignty of the people is one of the confused notions based on the wild idea of the people. If the sovereignty of the people means nothing more than the sovereignty of the whole state then he says, the sovereignty which is there as the personality of the whole is there in the real existence adequate to its concept as the person of the monarch.

But republican writers would reply that the sense in which they speak of the sovereignty of the people cannot be opposed to the sovereignty of government so long as that government is constitutional, not absolute. When the sovereignty of the people is conceived as the source or basis, not as the actual exercise of the legitimate powers of government there is no conflict between these two locations of sovereignty in the state. Yet the supremacy of the government always remains limited by the fact that all its powers are delegated and can be withdrawn or changed at the people's will.

The question of absolute or limited sovereignty and the connected question of unified or divided sovereignty have a different meaning in the case of the relation of governments to one another.

The theory of federal government discussed in *The Federalist* and in Mill's *Representative Government* contemplates a division of sovereignty not as between the people and their government but as between two distinct governments, to each of which the people grant certain powers. Distinguishing between the government of a national state and the government of a federal union Madison writes:

Among a people consolidated into one nation supremacy is completely vested in the national legislature. Among communities united for particular purposes it is vested partly in the general and partly in the municipal legislatures. In the former case all local authorities are subordinate to the supreme and may be controlled, directed, or abolished by it at pleasure. In the latter the local or municipal authorities form distinct and independent portions of the supremacy, no more subject within their respective spheres, to the general authority than the general authority is subject to them within its own sphere. The federal or general and the

tion puts all the political power in the hands of the rich or in the hands of the freeborn rich and poor alike It does not seem to be too violent an interpretation for modern translators to use the word *sovereignty* here for sovereignty can be said to belong to whatever person or class holds the supreme power by law

Within this meaning of sovereignty the basic difference between absolute and limited government or between the despotic and the constitutional regime leads to a distinction between the sovereign man and the sovereign office

The ruler who holds sovereignty in his person is an absolute sovereign if his power and authority are in no way limited by positive law According to some political philosophers sovereignty must be absolute In the opinion of Hobbes for example the notion of a limited sovereignty seems to be as self contradictory as that of a supremacy which is not supreme

After discussing the absolute rights which constitute sovereignty Hobbes goes on to say that this great authority being indivisible there is little ground for the opinion of them that say of sovereign kings though they be *singulis maiores* of greater power than every one of their subjects yet they be *uniuscūs minores* of less power than them all together For if by *all together* they mean not the collective body as one person then *all together* and *every one* signify the same and the speech is absurd But if by *all together* they understand them as one person (which person the sovereign bears) then the power of all together is the same as the sovereign's power and so again the speech is absurd

It makes no difference Hobbes argues whether the sovereignty is held by one man or by an assembly In either case the sovereign of a commonwealth is not subject to the civil laws For having the power to make and repeal laws he may when he pleases free himself from that subjection by repealing those laws that trouble him The sovereign therefore has absolute power which consists in the absolute right or liberty to do as he pleases for he that is bound to himself only is not bound at all

Aquinas seems to be taking the same view when he admits that the sovereign is

*exempt from the law* as to its coercive power since properly speaking no man is coerced by himself and law has no coercive power save from the authority of the sovereign But Aquinas differs from Hobbes in thinking that the authority if not the power of the prince is limited by the constitutional character of the kingly office In the mediaeval conception of monarchy the king is bound not to himself alone as Hobbes insists but to his subjects Their oath of allegiance to him is reciprocated by his coronation oath in which he assumes the obligation to uphold the customs of the realm

WILHELM AQUINAS CONCEIVES the sovereign prince as one element—the other being established law—in a government which is therefore both absolute and constitutional Hobbes conceives the sovereign as identical with a government which is wholly absolute The distinction here implied—between a mixed regime and one that is purely absolute—is more fully discussed in the chapters on CONSTITUTION and MONARCHY In contrast to both a republic or purely constitutional government substitutes the sovereign office for the sovereign man It denies the possession of sovereignty to men except in their capacity as office holders

According to the republican notions of Rousseau not even government itself has sovereignty except as representing the political community as a whole which is the sovereign Sovereignty he writes is vested in the government simply and solely as a commission an employment in which the rulers mere officials of the Sovereign exercise in their own name the power of which it makes them depositaries Since this power is not theirs except by delegation it can be limited modified or recovered at pleasure for the alienation of such a right is incompatible with the nature of the social body and contrary to the end of association

The unity of sovereignty is not impaired by the fact that a number of men may share in the exercise of sovereign power any more than the unity of government is destroyed by its division into separate departments or branches such as the legislative executive and judicial Since in a republic the government (in all its branches or offices) derives its power and

equally good all bad forms equally bad? If not what is the principle in terms of which some order of desirability or undesirability is established? For example is one good form of government better than another one bad form worse than another in terms of degrees of justice and injustice or in terms of efficiency and inefficiency? To put this question in another way is one form of good government better than another because it achieves a better result or merely because it achieves the same result more completely?

If there are several distinct forms of good government are there one or more ways in which these can be combined to effect a composite or mixed form? If a mixed form is comparable with the pure forms it unites is it superior to all to some to none of them? On what grounds? In what circumstances?

While proposing what they consider to be the ideal form of government some political philosophers admit that the ideal may not be realizable under existing circumstances or with men as they are. Plato for example recognizes that the state he outlines in the *Republic* may not be practicable and in the *Laws* he proposes institutions of government which represent for him something less than the ideal but which may be more achievable. The Athenian Stranger says of the state described in the *Republic* that whether it is possible or not no man acting upon any other principle will ever constitute a state which will be truer or better or more exalted in virtue. The state which he discusses in the *Laws* takes the second place. He refers to a third best which far from being even the practicable ideal may be merely the best form of government which now actually exists.

An toll also sets down the various ways in which forms of government can be judged and compared. We may consider he writes of what sort a government must be to be most in accordance with our aspirations if there were no external impediment but we must also consider what kind of government is adapted to particular states. In addition Aristotle thinks it necessary to know the form of government which is best suited to states in general as well as to say how a state may be constituted under varying conditions.

Most important of all it is necessary to know not only what form of government is best but also what is possible. Though political writers have excellent ideas Aristotle thinks they are often impractical. Since the best is often unattainable the true legislator ought to be acquainted not only with what is best in the abstract but also with what is best relative to circumstances.

Both Montesquieu and Mill later apply this basic distinction between the best form of government considered absolutely or in the abstract and the best form relative to particular historic circumstances. Among these are a people's economic condition level of culture political experience geography climate and racial characteristics. Montesquieu for example thinks that government by law absolutely considered is better than despotic government yet he also holds that despotic government is better for certain peoples. Mill thinks that the institutions of a representative democracy represent the ideal form of government but he acknowledges that absolute monarchy may be better for a rude or uncivilized people who have not yet advanced far from barbarism.

The great question here is whether the circumstances themselves can be improved so that a people may become fit or ready for a better form of government and ultimately for the best that is attainable that is the form relative to the best possible conditions. Since Montesquieu emphasizes what he considers to be fixed racial characteristics such as the servility of the Asiatics whereas Mill stresses conditions which are remediable by education economic progress and social reforms these two writers tend to give opposite answers. The issue is more fully discussed in the chapters on DE SOCRACY MONARCHY and PROGRESS.

Still other questions remain and should be mentioned here. Are the ideal state and the ideal form of government inseparable or can one be conceived apart from the other? How shall the ideal government be conceived—in terms of the best that is practicably attainable given man as he is or can be or in terms of a perfection which exceeds human attainment and which men can imitate only remotely or imperfectly if at all? Does divine government for example set a model which human govern-

state or local governments draw on the same reservoir of popular sovereignty but the sovereignty which each derives from that source is limited by the definition of matters reserved to the jurisdiction of the other.

The fundamental difference between the condition of states in a federation and the condition of colonial dependencies or subject peoples is that imperial government unlike federal government claims an unlimited sovereignty. The issues of imperialism which arise from the exercise of such power are discussed in the chapters on *TYRANNY* and *SLAVERY*.

The one remaining situation is that of independent governments the governments of separate states associated with one another only by treaties or alliances or at most in the kind of loose hegemony or league represented by the Greek confederacies or the American *Articles of Confederation*. In this situation the word sovereignty applied to independent governments signifies supremacy not in the sense of their having the authority and power to command but in the opposite sense of not being subject to any political superior.

This radical difference in meaning is explicitly formulated in Hegel's distinction between internal and external sovereignty.

After stating the conditions of the sovereignty of the state in relation to its own people Hegel says This is the sovereignty of the state at home. Sovereignty has another side *i.e.* sovereignty *vis à vis* foreign states. The state's individuality resides in its awareness of its own existence as a unit in sharp distinction from others and in this individuality Hegel finds the state's autonomy which he thinks is the most fundamental freedom which a people possesses as well as its highest dignity.

But from the fact that every state is sovereign and autonomous against its neighbors it also follows according to Hegel that such sovereigns are in a state of nature in relation to each other. It is this state of nature which Hobbes had earlier described as a state of war. Precisely because independent states have absolute sovereignty in relation to one another they live in the condition of perpetual war and upon the confines of battle with their frontiers armed and cannons planted against their neighbors round about.

In their relation to one another they are writes Kant like lawless savages. Following Rousseau he thinks it is fitting that the state viewed in relation to other peoples should be called a power. Unlike sovereign governments which unite authority with power in their domestic jurisdiction sovereign states in their external relations can exert force alone upon each other. When their interests conflict each yields only to superior force or to the threat of it. A fuller discussion of these matters will be found in the chapters on *LAW*, *STATE* and *WAR AND PEACE*.

As ALREADY INDICATED IN several places, the materials covered in this chapter necessarily demand a study of many related chapters dealing with political topics. This is peculiarly true of the problems concerning the forms of government. Separate chapters are devoted to each of the traditionally recognized forms, *i.e.* ARISTOCRACY DEMOCRACY MONARCHY OLIGARCHY TYRANNY. Each of these chapters defines a particular form distinguishes it from others and compares their merits. In addition the chapter on CONSTITUTION deals with what is perhaps the most fundamental of all distinctions in forms of government that between a republic and a despotism or between government by laws and government by men.

Here then it is necessary only to treat generally of the issues raised by the classification and comparison of diverse forms of government. They can be summarized in the following questions:

What are the criteria or marks of good government? Is the goodness of government determined by the end it serves by the way in which it is instituted by its efficiency in promoting whatever end it serves? Are such criteria of good government as justice, legitimacy and efficiency independent or interchangeable?

What is the nature of bad government? Can a distinction be made between the abuses or weakness to which good government is subject in actual operation and government which is essentially bad because perverse or corrupt in principle as well as practice?

Are there several forms of good government? Of bad government? How are they differentiated from one another? Are all good forms

## CHAPTER 31 GOVERNMENT

	642
	or
1. The sovereignty of government the units and disposition of sovereignty	650
(i) The sovereign person sovereignty vested in the individual ruler	
(ii) The sovereign office the partition of sovereignty among the offices created by a constitution	651
(iii) The sovereign people the community as the source of governmental sovereignty	
(iv) Self-government expressions of the popular will elections voting	652
2. The forms of government their evaluation and order	
(a) The distinction and comparison of good and bad forms of government	
(b) The combination of different forms of government the mixed constitution the mixed regime	653
(c) The absolute and relative evaluation of forms of government by reference to the nature of man or to historic circumstances	
(d) The influence of different forms of government on the formation of human character	654
(e) The ideal form of government the distinction between practicable and utopian ideals	
3. The powers branches or departments of government enumerations definitions and workings of these several powers	
(1) The separation and coordination of the several powers usurpations and infringement by one branch of government upon another	655
(2) The relation of the civil to the military power	
(3) The legislative department of government the making of law	656
(i) The powers and duties of the legislature	
(a) Legislative institutions and procedures	
(ii) The judicial department of government the application of law	657
(a) The powers and duties of the judiciary	
(b) Judicial institutions and procedures	
(4) The executive department of government the enforcement of law administration of decrees	658
(i) The powers and duties of the executive	
(ii) Administrative institutions and procedures	
4. The property and the expenditures of government taxation and budget	659
5. The relations of governments to one another sovereign provinces or states as in a confederation of states	
(a) Foreign policy the making of treaties the conduct of war and peace	660
(b) The government of dependent colonies colonial government the government of conquered peoples	
(c) The relation of local to national government the centralization and decentralization of governmental functions	
(d) Confederation and federal union the division of jurisdiction between state and federal governments	661
6. All real developments in government revolution and progress	662

ment should aim to approximate? Is that human government ideal which is most like the divine or on the contrary is the perfection of human government measured by standards drawn from the nature of man and the difficulties involved in the rule of men over men?

THE TRADITIONAL enumeration of the functions of government is threefold the legislative the judicial and the executive Locke adds what he calls the federative power the power of making treaties or alliances and in general of conducting foreign affairs It may be questioned whether this function is strictly coordinate with the other three since foreign like domestic affairs may fall within the province of the executive or the legislature or both as in the case of the Constitution of the United States

In our own day, the multiplication of administrative agencies and the development of planning boards have been thought to add a new dimension to the activities of government but again it may be questioned whether these are not merely supplemental to the functions of making law applying law to particular cases and regulating by administrative decree those matters which fall outside the domain of enforceable law The executive branch of government seems the most difficult to define because it involves both law enforcement and the administration of matters not covered by legislative enactment or judicial decision

If the threefold division of the functions of government is exhaustive the question remains how these distinct activities shall be related to one another and by whom they shall be performed In an absolute monarchy in

which the king is the government all powers are in the hands of one man Though he may delegate his powers to others they act only as his deputies or agents not as independent officials This does not obliterate the theoretical distinction between legislation adjudication, and execution but in this situation there can be no practical separation of the three powers, certainly no legal system of checks and balances

It is the separation of powers according to Montesquieu that is the basis of political liberty Power should be a check to power he writes In a system of separated powers the legislative body being composed of two parts they check one another by the mutual privilege of rejecting They are both restrained by the executive power as the executive is by the legislative

Whether or not Montesquieu is right in attributing this aspect of constitutionalism to the limited monarchy of England in his own day his argument can be examined apart from history for it raises the general question whether government by law can be preserved from degenerating into despotic government except by the separation of powers

For the American Federalists the system of checks and balances written into the Constitution so contrives the interior structure of the government that its several constituent parts by their mutual relations be the means of keeping each other in their proper places Thus they consider the prime advantage to be gained from Montesquieu's principle of the separation of powers The principle itself is held to be the sacred maxim of free government

## OUTLINE OF TOPICS

1 The general theory of government	PAGE 646
1a The origin and necessity of government the issue concerning unarchy	646
1b Comparison of political or civil government with ecclesiastical government and with paternal or despotic rule	647
1c The ends and limits of government the criteria of legitimacy and justice	648
1d The elements of government authority and power or coercive force the distinction between <i>de jure</i> and <i>de facto</i> government	649
1e The attributes of good government	649
1f The abuses and corruptions to which government is subject	650

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Iliad* BK II {265-83} 12d the number 4 is the number of the volume in the set, the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS.** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters c and d refer to the upper and lower halves of the left hand side of the page, the letters e and f to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS.** One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference. Line numbers in brackets are given in certain cases, e.g. *Iliad* BK II {265-83} 12d.

**BIBLE REFERENCES.** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows, e.g. OLD TESTAMENT *Nehemiah* 7:45-(D) II *Esdras* 7:46.

**SYMBOLS.** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference. *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

## Chapter 32. HABIT

### INTRODUCTION

THE familiar word habit has a tremendous range of meaning. Some of its meanings in technical discourse are so divergent from one another—as well as from the popular understanding of the term—that it is difficult to find a common thread of derivation whereby to pass from one meaning to another.

We can eliminate at once the use of the word to designate apparel as when we speak of a "man's habit." Let even this sense contain a root of meaning which cannot be dismissed. Augustine points out that the term habit is derived from the verb to have and Aristotle considers the meanings of to have in cludes the sense in which a man may be said to have a coat or tunic along with the sense in which a man may be said to have a habit—a piece of knowledge or a virtue. Just as clothes are something a person has or possesses in a manner more or less fitting to the body, so hat its in the psychological sense are qualities which a person has or possesses, and they too can be judged for their fitness.

The understanding of habit is conveyed in the ancient remark which has become a common expression—that habit is second nature. Habit is not original nature but something added thereto as clothes are added to the body. But unlike clothes, which are added externally and merely by contact habits as second nature are nature itself transformed or developed. In the words of an ancient poet whom Aristotle quotes with approval—habits but long practice and this becomes men's nature in the end.

Not all as we shall see would grant that practice is essential to habit. Nevertheless the word practice suggests one notion that is common to all theories of acquired habit, namely that habit is a *reinforced effect*—the result of something done or experienced. Within this common understanding there are opposite views. Accord-

ing to one view the acquisition of habits depends on activity according to another habits are modifications, passively not actively acquired.

The word habit is also used in a sense diametrically opposite to the meanings so far considered. It is the sense in which Aristotle in the History of Animals discusses the habits of animals and distinguishes species according to the differences in their habits. Here the word habit is used to signify not an acquired pattern of behavior but an innate predisposition to act or react in a certain way. The difference between acquired habits and the habits to which there is an innate tendency James tells us, is marked by the fact that the latter generally are called instincts.

The opposition between these two meanings of habit is clear. On the one hand habits represent what in the case of living things at least is added by nurture to nature—the results of experience, training or activity. On the other hand habits which are identical with instincts belong to original nature itself—part of the native endowment of the animal. Is there any common thread of meaning in the notions of acquired and innate habit which may explain the use of the word in such opposite senses?

The same last statement that a person does what he is in the habit of doing indicates that a habit is a tendency to a particular sort of behavior. Knowledge of a person's habits enables us to predict what he is likely to do in any situation which elicits habitual conduct on his part. So, too, an animal's behavior in a particular situation may be predicted from a knowledge of its instincts. Instinct and habit—or innate and acquired habits—seem to have this common character that they are tendencies to behavior of a specific or determinate sort. They are definitely not random behavior. In the one case the

tendency is preformed a part of the inherited nature of the organism In the other the tendency is somehow a product of experience and learning In neither case does habit refer to mere capacity for action unformed and indeterminate nor does it refer to the action but rather to the tendency to act

THE MODIFIABILITY OF INSTINCTS BY EXPERIENCE indicates another and more dynamic connection between innate and acquired habits William James conceives innately determined behavior as if it were a plastic material out of which new patterns of conduct can be formed The process of animal learning he thinks can be generally described as the replacement of instincts by habits Most instincts he writes are implanted for the sake of giving rise to habits and this purpose once accomplished the instincts themselves as such have no *rason d'être* in the psychological economy and consequently fade away

Some years before the Russian physiologists Bechtere夫 and Pavlov experimentally studied the conditioning of reflexes James described animal learning in terms of the substitution of new for old responses to stimuli which had previously called forth an instinctive reaction or in terms of the attachment of instinctive responses to new stimuli The actions we call instinctive James writes all conform to the general reflex type and are called forth by determinate sensory stimuli For example a predatory animal instinctively responsive to various perceptible signs of the whereabouts of its prey may learn to hunt for its food in a particular locality at a particular time and in a particular way Or to take the example James gives if a child in his first attempts to pat a dog gets snapped at or bitten so that the impulse of fear is strongly aroused it may be that for years to come no dog will excite in him the impulse to fondle again Similarly an animal which has no instinctive fear of man may acquire an habitual tendency to flee at man's approach as the result of experiences in which the appearance of man is associated with instinctively recognized signs of danger

In the classification of animals from Aristotle on the instincts peculiar to each species have been used in their differentiation In addition the degree to which the instincts of an animal

are either relatively inflexible at one extreme or easily modifiable at the other has been thought to indicate that animal's rank in the scale of intelligence The higher animals seem to have a greater capacity to form habits and to be capable therefore of modifying their instinctive patterns of behavior as the result of experience In consequence their behavior is both more adaptive and more variable than that of animals which always follow the lines of action laid down by instinct

*Species whose instincts are largely unmodifiable* are at a disadvantage in a changing environment or in one to which they are not innately adapted In the struggle for existence Darwin observes it is the organism that varies even so little either in habits or structure which "gains an advantage over some other inhabitant of the same country Though for the most part instincts seem to be directed toward the animal's survival intelligence or the power of modifying instincts by learning may sometimes be needed to save the animal from his own instinct

If the lower animals are most dependent on their instincts and least able to modify them that would seem to indicate a kind of opposition between instinct and intelligence Darwin quotes Cuvier to the effect that instinct and intelligence stand in an inverse ratio to each other but he himself does not wholly accept this view He thinks that the behavior of beavers for example or of certain classes of insects shows that a high degree of intelligence is certainly compatible with complex instincts Yet he admits that it is not improbable that there is a certain amount of interference between the development of free intelligence and of instinct

On this subject of instinct in relation to intelligence or reason James seems to take a less equivocal position According to him man possesses all the impulses that [animals] have and a great many more besides After enumerating what he considers to be the instinctive tendencies of the human species he concludes by saying that no other mammal not even the monkey shows so large an array But since James also thinks that man has the keenest intelligence and may even be the only reasoning animal he cannot believe that there is any material antagonism between instinct and reason On the

contrary a high development of the faculties of memory of associating ideas and of making inferences implies not the absence of instinct but the modifiability of instinct by experience and learning. Though the animal richest in reason might be also the animal richest in instinctive impulses too James writes he would never seem the fatal automaton which a merely instinctive animal would be.

The opposite position is taken by those who like Cuvier hold that the more adequate an animal's instinctive equipment is for its survival the less it needs free intelligence for adaptive purposes and the less important is the role of learning and habit formation. Some writers like Aquinas go further than this and maintain that in the case of man the power of reason as an instrument of learning and of solving life's problems supplants instinct almost entirely or needs to be supplemented by instinctive impulses of an extremely rudimentary sort—hardly more complex than simple reflexes.

What other animals do by instinct man does by reason. Brute animals Aquinas writes do no act at the command of reason but if they are left to themselves such animals act from natural instinct. Since in his opinion habits can be formed only by acts which involve reason as a factor he does not think that strictly speaking habits are to be found in brutes. But he adds to the extent that man's reason may influence brutes by a sort of conditioning, to do things in this or that way so in this sense to a certain extent we can admit the existence of habits in brute animals.

THE MODIFICATION OF INSTINCTS IN THE COURSE OF INDIVIDUAL LIFE RAISES A QUESTION ABOUT THEIR MODIFIABILITY FROM GENERATION TO GENERATION. THE QUESTION HAS OBVIOUS SIGNIFICANCE FOR THE THEORY OF EVOLUTION.

It is thought by some that an animal's instincts represent the past experience of the race. In a passage quoted by James Herbert Spencer for example maintains that reflex actions and instincts result from the regeneration of experience continued for numberless generations. Freud appears to hold much the same opinion.

All organic instincts are conservative he writes. They are historically acquired and are directed towards regress one towards reinstatement of something earlier. Indeed he claims that the instincts of living things revert back beyond ancestral history to the inorganic. They go back to an ancient starting point which the living being left long ago. They are an imprint left upon the development of the organism by the evolution of our earth and its relation to the sun.

James on the other hand claims that there is perhaps not one single unequivocal item of positive proof in favor of the view that adaptive changes are inherited. He thinks the variability of instincts from generation to generation must be accounted for by some other means than the inheritance of acquired characteristics according to which the habits acquired by earlier generations gradually become through hereditary transmutation the innate habits of later generations.

The question of their origin aside what is the structure of instincts? In the chapter on Evolution where this matter is considered instinctive behavior is described as having three components. It involves first an innate ability to recognize certain objects second an emotional reaction to them which includes an impulse to act in a certain way and third the ability to execute that impulse without benefit of learning.

James covers two of these three points when he defines an instinct as the faculty of acting in such a way as to produce certain ends with out foresight of the ends and without previous education in the performance and he touches on the remaining one when he declares that instinctive reactions and emotional expressions shade imperceptibly into each other. Every object that excites an instinct he goes on to say excites an emotion as well but emotions fall short of instincts in that the emotional reaction usually terminates in the subject's own body whilst the instinctive reaction is apt to go further and enter into practical relations with the exciting object.

In the discussion of instincts from Aristotle to Freud the emphasis on one or another of these components has varied from time to time. Medieval psychologists if we take Aquinas as an example seem to stress the cognitive aspect. He speaks of the sheep running away when it sees the wolf not because of its color or shape but as a natural enemy. The point which he thinks

notable here is not the fact that the sheep runs away but rather the fact that without any previous experience of wolves the sheep recognizes the wolf as dangerous. The sheep seeing the wolf judges it a thing to be shunned—not from deliberation but from natural instinct. This instinctive power of recognizing what is to the animal's advantage or peril Aquinas calls the estimative power and assigns it along with memory and imagination to the sensitive faculty.

Later writers stress the emotional and conative aspects of instinct—feeling and impulse. James for example indicates this emphasis when he says that every instinct is an impulse and Freud makes desire central rather than perception or action. An instinct he says may be described as a stimulus but it would be more exact to speak of a stimulus of instinctual origin as a need. The instincts are the basic cravings or needs and these instinctual needs are the primary unconscious determinants of behavior and thought.

What Freud calls instinctual needs seem to be the counterpart of what in an earlier phase of the tradition are called natural desires. These two notions are far from being strictly interchangeable but they do have a certain similarity in their reference to desires which are not conscious or acquired through experience. This matter is further discussed in the chapter on DESIRE.

IF WE TURN NOW to the consideration of habit as something acquired by the individual we find two major issues. The first of these has already been mentioned in connection with the conception of habit as a *retained effect*.

According to William James the capacity for habit formation is a general property of nature found in inanimate matter as well as in living things. The moment one tries to define what habit is he writes one is led to the fundamental properties of matter. He regards the laws of nature for example as nothing but the immutable habits which the different elementary sorts of matter follow in their actions and reactions upon each other. In the organic world however the habits are more variable than this.

James attributes this universal capacity for habit formation to what he calls the plasticity

of matter which consists in the possession of a structure weak enough to yield to an influence but strong enough not to yield all at once. Each relatively stable phase of equilibrium in such a structure is marked by what we may call a new set of habits. He cites as examples of habit formation in inorganic matter such things as the magnetizing of an iron bar, the setting of plow scratches on a polished surface or creases in a piece of cloth. The matter in each of these cases is not only plastic and yielding but retentive through its inertia. When the structure has yielded he writes the same inertia becomes the condition of its comparative permanence in the new form and of the new habits the body then manifests.

The habits of living things or of the human mind are to be regarded only as special cases of nature's general plasticity and retentiveness. James does not fail to observe the difference between the magnetized bar, the scratched surface or the creased cloth and the habits of a trained animal or a skilled workman. The latter are acquired by activity—by practicing the same act repeatedly. Furthermore they are not mere passive relics of a past impression but are themselves tendencies to action. They erupt into action almost spontaneously when the occasion for performance arises.

It may be questioned whether the word habit should be used so broadly. Unlike James most writers restrict its application to living things and even there they limit habit formation to the sphere of learning. If the capacity to learn from experience is not a property of plant life then plants cannot form habits. The same may be said of certain species of animals whose activity is entirely and inflexibly instinctive. Habits are possessed only by those organisms—animals or men—whose future conduct can be determined by their own past behavior. Aquinas as we have seen goes further than this and limits habit formation in a strict sense to man alone.

This leads at once to the second issue. For those who believe that man is not specifically different from all other animals man's habits and his habit formation require no special distinction or analysis. They hold that human intelligence differs from animal intelligence only in degree not in kind. No other factors they think are present in human learn-

ing than those which operate when animals somehow profit from experience or acquire new modes of behavior. In the great books there is to be found however a very special theory of habit which is part of the doctrine that man is specifically different from all other animals in that he alone is rational and has free will.

The issue about man's nature is discussed in other chapters (ANIMAL, EVOLUTION, MAN AND MIND). Here we must examine the consequences for the theory of habit of these opposing views. Do animals and men form habits in the same sense of that term? The use of the word is not at stake for habit may be used in a different sense for the acquired dispositions of animals. Those who hold that brute animals and men do not have habits in the same sense acknowledge that men may have, in addition to the specifically human habits, the sort of modified instincts or conditioned reflexes which are typical of animal habit formation. Furthermore it is recognized that human and animal habits are alike in certain respects. Both are acquired by activity and both are tendencies to activity of a determinate sort.

The question therefore is simply this: Does one conception of habit apply to men and animals, or does human nature require a special conception applicable to man alone? To clarify this issue it is necessary to summarize the analysis of human habits which Aristotle and Aquinas develop more fully than other writers, even than those who share their view of the rationality and freedom of man.

THAT ARISTOTLE and Aquinas should be the authors of an elaborate theory of human habits becomes intelligible in terms of two facts.

In the first place they consider habit in the context of moral theory. For them the virtues moral or intellectual are habits, and so necessarily are the opposite vices. Virtues are good habits, vices bad habits; hence good or bad human habits must be so formed and constituted that they can have the moral quality connoted by virtue or vice. Since virtue is praiseworthy and vice blameworthy only if the possessor is responsible, human habit is conceived as arising from freely chosen acts.

In the second place the understanding of habit is affected by their psychological doctrine

of faculties and especially by their analysis of the powers and activities which they think belong peculiarly to man. This in turn gives a metaphysical meaning to habit for they treat human powers and human acts as special cases of potentiality and actualization.

Aquinas bases much of his discussion of habit on Aristotle's definition of it as a disposition whereby that which is disposed is disposed well or ill and this, either in regard to itself or in regard to another. In calling a habit a disposition Aristotle goes on to say that all dispositions are not necessarily habits, for while dispositions are unstable or ephemeral, habits are permanent or at least difficult to alter.

For a disposition to be a habit certain other conditions must be present according to Aquinas. That which is disposed should be distinct from that to which it is disposed, he writes and hence should be related to it as potentiality is to act. If there is a being which lacks all potentiality he points out we can find no room in such a thing for habit as is clearly the case in God.

It is also necessary that that which is in a state of potentiality in regard to something else be capable of determination in several ways and to various things. If there were a potentiality which could be actualized in one way and one way only then such a power of operation could not be determined by habits. Some of man's powers seem to be of this sort. His faculty of sensation, for example, functions perfectly when the sense organs have normally matured. A man does not learn to see colors or to hear tones, and so the simple use of his senses—apart from aesthetic perceptions and trained discriminations—does not lead to sensory habits.

The exterior apprehensive powers as sight, hearing and the like Aquinas maintains are not susceptible of habits but are ordained to the fixed acts according to the disposition of their nature.

In contrast man's faculty of thinking and knowing can be improved or perfected by activity and exercise. The words improved and perfected are misleading if they are thought to exclude bad habits, for a bad habit is no less a habit than a good one. The definition of habit Aquinas points out includes dispositions which dispose the subject well or

ill to its form or to its operation. Hence when we say that a power of operation is improved or perfected by being exercised we must mean only that after a number of particular acts the individual has a *more determinate capacity* for definite operation than he had before.

A man may have at birth the mere capacity for knowing grammar or geometry but after he has learned these subjects he has the habit of such knowledge. This according to Aristotle and Aquinas means that his original capacity has been rendered more determinate in its activity. It would be so even if he had learned errors that is even if the intellectual habits he had formed disposed his mind in a manner which would be called ill rather than well.

The difference between a man who has learned grammar and one who has not is a difference in their capacity for a certain intellectual performance a difference resulting from the intellectual work which has been done by the man who has learned grammar. That difference is an intellectual habit. The man who has not learned grammar has the same undeveloped capacity for knowing grammar with which he was born. The man who has learned grammar has had his native capacity for grammatical knowledge developed. That developed capacity is a habit of knowledge or skill which manifests itself in the way in which he writes and speaks. But even when he is not actually exercising his grammatical skill the fact that he has formed this particular habit means that he will be able whenever the occasion arises to do correctly with speed and facility what the man who does not have the habit cannot do readily or easily if he can do it at all.

It may be helpful to illustrate the same points by reference to a bodily habit such as a gymnastic or athletic skill which being an art is a habit not of body alone but of mind as well. If two men are born with normal bodies equally capable of certain muscular coordinations they stand in the same relation to performing on the tennis court. Both are equally able to learn the game. But when one of them has learned to play his acquired skill consists in the trained capacity for the required acts or motions. The other man may be able to perform all these acts or go through all these motions but not with the same facility and grace or as pleasantly as

the man whose mastery of the game lies in a habit formed by much practice in doing what is required. As the habit gradually grows art wardness is overcome speed increases and pleasure in performance replaces pain or difficulty.

Clearly then the habit exists even when it is not in operation. It may even develop during periods of inactivity. As William James remarks there is a sense in which we learn to swim during the winter and to skate during the summer when we are not actually engaged in these sports. This would seem to be inconsistent with the general insight common to all observers that habits are strengthened by exercise and weakened or broken by disuse or by the performance of contrary acts. But James explains that his point stated less paradoxically means only that during periods of rest the effects of prior activity seem to consolidate and build up a habit.

The dynamism of habit formation and habitual activity is summarized in the language of Aristotle and Aquinas by the statement that habit is a kind of medium between mere power and mere act. On the one hand a habit is like a power or capacity for though it is an improvement on native ability it is still only an ability to perform certain acts it is not the actual performance of them. On the other hand habit is like operation or activity for it represents an actualization or development of capacity even as a particular operation is an actualization of the power to act. That is why habit is sometimes called a second grade of potentiality (compared to natural capacity as first potentiality) and also a first grade of actuality (compared to operation as complete act).

ACCORDING TO THE theory of specifically human habits habits are situated only in man's powers of reason and will. Habits are formed in the other powers only to the extent that they are subject to direction by his reason and will. Specifically human habits can be formed only in that area of activity in which men are free to act or not to act and when they act free to act this way or that. Habit the product of freedom is not thought of as abolishing freedom. However difficult it may be to exert a free choice against a strong habit even the strongest

habit is not conceived as unbreakable and if it is breakable it must permit action contrary to itself. Habitual behavior only seems to lack freedom because a man does habitually without conscious attention to details, what he would be forced to do by conscious choice at every step if he lacked the habit.

In the theory under consideration habits are classified according to the faculty which they determine or perfect on the ground that a given power which may be variously directed to act needs a habit whereby it is well disposed to its act. Consequently there are intellectual habits, or habits of thinking and knowing, and appetitive habits, or habits of desire which involve the emotions and the will and usually entail specific types of conduct. Within a single faculty such as the intellect habits are further differentiated by reference to their objects or to the end to which their characteristic operation is directed. For example the habit of knowing which consists in a science like geometry and the habit of artistic performance such as skill in grammar both belong to the intellect but they are distinct habits according to their objects or ends.

All of these distinctions have moral as well as psychological significance. They are used in formulating the criteria of good and bad habits which are more appropriately discussed in the chapter on VIRTUE AND VICE. But here one further psychological distinction deserves comment. Some of man's acquired habits are regarded as natural in a special sense—not in the sense in which instincts are called natural or innate habits. The distinction is drawn from the supposition that certain habits develop in all men because since human nature is the same for all men we will inevitably form these habits if they act at all. This word natural here applied to a habit simply means that it is common to all having the same nature.

For example the understanding of the law of contradiction—that the same thing cannot be affirmed and denied at the same time—and other simple axioms of theoretic knowledge are said to be possessed by the human mind as a matter of natural habit. If a man thinks at all he will come to know these truths. It is owing to the very nature of the intellectual soul, Aquinas writes, that man being once grasped what is

a whole and what is a part should at once perceive that every whole is larger than its part.

The sense in which Aquinas says that *the understanding of first principles* is called a natural habit applies to the first principles of the practical reason as well as to the axioms of theoretic knowledge. Just as no man who makes theoretic judgments about the true and the false can be in his opinion without habitual knowledge of the principle of contradiction so he thinks no man who makes practical judgments about good and evil can be without habitual knowledge of the natural moral law the first principle of which is that *the good is to be sought and evil avoided*. Since the precepts of the natural law are sometimes considered by reason actually Aquinas writes while sometimes they are in the reason only habitually in this way the natural law may be called a habit.

In a different phase of the tradition Hume regards it as an inevitable tendency of the human mind to interpret any repeated sequence of events in terms of cause and effect. If one thing has preceded another a certain number of times in our experience we are likely to infer that if the first occurs the second will follow. The principle which determines us to form such a conclusion is Hume says, Custom or Habit. All our inferences from experience are "effects of custom not of reasoning" and since the habit of inferring a future connection between things which have been customarily conjoined in the past is in his opinion universally present in human nature Hume refers to it as a species of natural instinct which no reasoning or process of thought and understanding is able either to produce or prevent.

Even Kant's synthetic judgments *a priori* have a certain similarity to the thing called natural habit. They comprise judgments the mind will make because of its own nature or in Kant's terms, its transcendental structure. Though *a priori* the judgment itself is not innate for it arises only when actual experience provides its subject matter. So too the natural habit of first principles of which Aquinas speaks is not innate but a result of experience.

THERE IS STILL ONE OTHER TRADITIONAL MEANING OF THE PHRASE NATURAL HABIT. IT OCCURS IN

**Christian theology** Habits are there distinguished according as they are acquired by man's own efforts or are a gift of God's grace which adds to or elevates human nature. The former are natural, the latter supernatural.

In the sphere of supernatural habits the theologian makes a distinction between grace itself and the special habits which accompany grace. Aquinas for example writes that just as the natural light of reason is something different from the acquired virtues which are ordained to this natural light so also the light of grace which is a participation of the divine nature is something different from the infused virtues which are derived from and are ordained to this light. These infused virtues like the natural virtues are good habits—principles of operation determining acts of thought or desire. They are either the specifically theological virtues of faith, hope and charity or the supernatural counterparts of the acquired intellectual and moral virtues—the habits which are called the infused virtues and the moral and intellectual gifts.

Grace taken in itself rather than in its consequences is not an *operative* habit that is it is not a habit of performing certain acts. Nevertheless regarded as something added to and perfecting nature it is considered under the aspect of habit. But rather than a habit where by power is inclined to an act Aquinas includes it among those habits by which the nature is well or ill disposed to something and chiefly when such a disposition has become a sort of nature. Through the habit of grace man's nature is elevated by becoming a partaker of the divine nature.

To distinguish this kind of habit from those in the operative order it is sometimes called an *entitative* habit—a habit of the very being of man's personality. On the purely natural plane health may be thought of in the same way as a habit which is entitative rather than operative. It is a habit not of thought, desire or conduct but of man's physical being.

The word *custom* is sometimes a synonym for habit and sometimes a variant with special connotations. What a man does habitually is customary for him to do. So far as the single individual is concerned there seems to be no

difference between habit and custom. But we usually think of customs in terms of the group or community rather than the individual. As indicated in the chapter on *CUSTOM AND CONVENTION* the prevailing modes of behavior in a society and its widely shared beliefs represent common habits of thought and action on the part of its members. Apart from the habits of individuals social customs have no existence whatsoever. But social customs and individual habits cannot be equated because with respect to any customary practice or opinion, there may be non conforming individuals—men of divergent habit. The prevalent or predominant customs are the habits of the majority.

No society endures for long or functions peacefully unless common habits generate the ties of custom. To perpetuate itself the state necessarily attempts to mould the habits of each growing generation—by every means of education by tradition by law. So important is the stability of custom in the life of society according to Montaigne that it is very unjust to subject public and established customs and institutions to the weakness and instability of a private and particular fan. He doubts whether any so manifest benefit can accrue from the alteration of a law received let it be what it will as there is danger and inconvenience in altering it. His extreme caution with regard to changing the law comes from a preference for the stability of settled customs and from the recognition that government is a structure composed of diverse parts and members joined and united together with so strict connection that it is impossible to move so much as one brick or stone but the whole body will be sensible of it.

Without habits of action at least neither the individual nor society can avoid chaos. Habits bind day to day in a continuity which would be lost if the recurring problems of conduct or thought had to be solved anew each time they arose. Without habits life would become unbearably burdensome it would bog down under the weight of making decisions. Without habits men could not live with themselves much less with one another. Habits are as William James remarks the fly wheel of society.

## OUTLINE OF TOPICS

1. Divine conceptions of habit as second nature perfection of power retained modification of matter	673
1a Habit in relation to potency and act	674
1b Habit in relation to the plasticity of matter	675
2. The kinds of habit the distinction of habit from disposition and other qualities	
2a Differentiation of habits according to origin and function innate and acquired enative and operative habits	676
2b Differentiation of habits according to the capacity habituated or to the object of the habit's activity	677
3. The instincts or innate habits of animals and men	
3a Instinctual needs or drives	678
3b The innate sense of the beneficial and harmful the causative power	678
3c Instinct in relation to reason	
3d The instinctive basis of habit formation the modification of instinct and reflexes through experience or learning	679
3e The genesis transmission and modification of instincts in the course of generations	680
4. Habit formation	
4a The causes of habit practice repetition teaching and the law	
4b The growth and decay of habits ways of strengthening and breaking habits	
5. The analysis of specifically human habits	681
5a Habits of body manual arts and the skills of play	
5b Habits of appetite and will the moral virtues as good habits	
5c The natural habits of reason innate predispositions of the mind	
5d The acquired habits of mind the intellectual virtues	682
5e Supernatural habits	
(1) Grace as an enactive habit of the person	
(2) The infused virtues and the supernatural gifts	
(3) The theological virtues	
6. The force of habit in human life	
6a The automatic or unconscious functioning of habits	
6b The contribution of habit to the perfection of character and mind	
6c Habit and freedom	
The social significance of habit habit in relation to law	683

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HO IER *Iliad* BK II [265-83] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS.** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS.** One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e.g. *Iliad* BK II [v. 283] 12d

**BIBLE REFERENCES.** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT *Nehemiah* 7 42-(D) II *Ezdras* 7 46

**SYMBOLS.** The abbreviation esp calls the reader's attention to one or more especially relevant parts of a whole reference. *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Preface.

# Chapter 33 HAPPINESS

## INTRODUCTION

THE great questions about happiness are concerned with its definition and its attainability. In what does happiness consist? Is it the same for all men or do different men seek different things in the name of happiness? Can happiness be achieved on earth or only hereafter? And if the pursuit of happiness is not a futile quest by what means or steps should it be undertaken?

On all these questions the great books set forth the fundamental inquiries and speculations as well as the controversies to which they have given rise in the tradition of western thought. There seems to be no question that men want happiness. Man wishes to be happy. Pascal writes and only wishes to be happy and cannot wish not to be so. To the question what moves desire? Locke thinks only one answer is possible—happiness and that alone.

But this fact even if it goes undisputed does not settle the issue whether men are right in governing their lives with a view to being or becoming happy. There is therefore one further question. Should men make happiness their goal and direct their acts accordingly?

According to Kant the principle of *private* happiness is the direct opposite of the principle of morality. He understands happiness to consist in the satisfaction of all our desires *extensive* in regard to their multiplicity *intense* in regard to their degree *prolongue* in regard to their duration. What Kant calls the pragmatic rule of life which aims at happiness tells us what we have to do if we wish to become possessed of happiness.

Unlike the moral law it is a hypothetical not a categorical imperative. Furthermore Kant points out that such a pragmatic or utilitarian ethics (which is for him the same as an ethics of happiness) cannot help being em-

pirical for it is only by experience he says that I can learn either what inclinations exist which desire satisfaction or what are the natural means of satisfying them. Such empirical knowledge is available for each individual in his own way. Hence there can be no universal solution in terms of desire of the problem of how to be happy. To reduce moral philosophy to a theory of happiness must result therefore in giving up the search for ethical principles which are both universal and *a priori*.

In sharp opposition to the pragmatic rule Kant sets the moral or ethical law—the motive of which is not simply to be happy but rather to be *worthy* of happiness. In addition being a categorical imperative which imposes an absolute obligation upon us this law he says takes no account of our desires or the means of satisfying them. Rather it dictates how we ought to act in order to deserve happiness. It is drawn from pure reason not from experience and therefore has the universality of an *a priori* principle without which in Kant's opinion genuine science of ethics—or metaphysics & morals—is impossible.

With the idea of moral worth—that *worthy* alone deserves happiness—taken away, happiness alone is according to Kant far from being the complete good. Reason does not approve of it (however much inclination may desire it) except as united with desert. On the other hand Kant admits morality alone and with it mere desert is likewise far from being the complete good. These two things must be united to constitute the true *summum bonum* which according to Kant means both the supreme and the complete good. The man who conducts himself in a manner not unworthy of happiness must be able to hope for the possession of happiness.

But even if happiness combined with moral

worth does constitute the supreme good Kant still refuses to admit that happiness as a practical objective can function as a moral principle. Thou a man can hope to be happy only if under the moral law he does his duty he should not do his duty with the hope of thereby becoming happy. A disposition he writes which should require the prospect of happiness as its necessary condition would not be moral, and hence also would not be worthy of complete happiness. The moral law commands the performance of duty *conditionally*. Happiness should be a consequence but it cannot be a condition of moral action.

In other words happiness fails for Kant to impose any moral obligation or to provide a standard of right and wrong in human conduct. No more than pleasure can happiness be used as a first principle in ethics if morality must avoid all calculations of utility or expediency whereby things are done or left undone for the sake of happiness, or any other end to be enjoyed.

**THIS ISSUE BETWEEN** an ethics of duty and an ethics of happiness as well as the conflict it involves between law and desire as sources of morality are considered from other points of view in the chapters on Desire and Duty, and again in Good and Evil where the problem of the *summum bonum* is raised. In this chapter we shall be concerned with happiness as an ethical principle and therefore with the problems to be faced by those who in one way or another accept happiness as the supreme good and the end of life. They may set no reason to reject moral principles which work through desire rather than duty. They may find nothing repugnant in appealing to happiness as the ultimate end which justifies the means and determines the order of all other goods. But they cannot make happiness the first principle of ethics without having to face many questions concerning the nature of happiness and its relation to duty.

Discussion begins rather than ends with the fact that happiness is what all men desire. Once they have asserted that fact once they have made happiness the most fundamental of all ethical terms writers like Aristotle or Locke Aquinas or Mill cannot escape the quest on

whether *all* who seek happiness look for it or find it in the same things.

Holding that a definite conception of happiness cannot be formulated Kant thinks that happiness fails even as a pragmatic principle of conduct. The notion of happiness is so indefinite he writes that although every man wishes to attain it yet he never can say definitely and consistently what it is that he really wishes. He cannot determine with certainty what would make him truly happy because to do so he would need to be omniscient. If this is true of the individual how various must be the notions of happiness which prevail among men in general!

Locke plainly asserts what is here implied namely the fact that everyone does not place his happiness in the same thing or choose the same way to it. But admitting this fact does not prevent Locke from inquiring how in matters of happiness and misery men come often to prefer the worse to the better and to choose that which by their own confession has made them miserable. Even though he declares that the same thing is not good to every man alike Locke thinks it is possible to account for the misery that men often bring on themselves by explaining how the individual may make errors in judgment—how things come to be represented to our desires under deceitful appearances by the judgment pronouncing wrongly concerning them.

But this applies to the individual only. Locke does not think it is possible to show that when two men differ in their notions of happiness one is right and the other wrong. Though all men's desires tend to happiness, yet they are not moved by the same object. Men may choose different things and yet all choose right. He does not quarrel with the theologians who on the basis of divine revelation describe the eternal happiness in the life hereafter which is to be enjoyed alike by all who are saved. But revelation is one, thus and reason another.

With respect to temporal happiness on earth reason cannot achieve a definition of the end that has the certainty of faith concerning salvation. Hence Locke quarrels with the philosophers of old who in his opinion vainly sought to define the *summum bonum* or happiness in such a way that all men would agree that

happiness is or if they failed to some would be in error and misled in their pursuit of happiness

It may be wondered therefore what Locke means by saying that there is a science of what man ought to do as a rational and voluntary agent for the attainment of happiness He describes ethics as the science of the rules and measures of human actions which lead to happiness and he places morality amongst the sciences capable of demonstration wherein from self evident propositions by necessary consequences as incontestable as those in mathematics the measures of right and wrong might be made out to any one that will apply himself with the same indifference and attention to the one as he does to the other of these sciences

THE ANCIENT philosophers with whom Locke disagrees insist that a science of ethics depends on a first principle which is self evident in the same way to all men Happiness is not that principle if the content of happiness is what each man thinks it to be for if no universally applicable definition of happiness can be given—if when men differ in their conception of what constitutes happiness one man may be as right as another—then the fact that all men agree upon giving the name happiness to what they ultimately want amounts to no more than a nominal agreement Such nominal agreement in the opinion of Aristotle and Aquinas does not suffice to establish a science of ethics with rules for the pursuit of happiness which shall apply universally to all men

On their view what is truly human happiness must be the same for all men The reason in the words of Aquinas is that all men agree in their specific nature It is in terms of their specific or common nature that happiness can be objectively defined Happiness so conceived is a common end for all since nature tends to one thing only

It may be granted that there are in fact many different opinions about what constitutes happiness but it cannot be admitted that all are equally sound without admitting a complete relativism in moral matters That men do in fact seek different things under the name of happiness does not according to Aristotle and Aquinas alter the truth that the happiness they

should seek must be something appropriate to the humanity which is common to them all rather than something determined by their individually differing needs or temperaments If it were the latter then Aristotle and Aquinas would admit that questions about what men should do to achieve happiness would be answerable only by individual opinion or personal preference not by scientific analysis or demonstration

With the exception of Locke and perhaps to a less extent Mill those who think that a science of ethics can be founded on happiness as the first principle tend to maintain that there can be only one right conception of human happiness They regard other notions as misconceptions which may appear to be but are not really the *summum bonum* The various definitions of happiness which men have given thus present the problem of the real and the apparent good, the significance of which is considered in the chapter on GOOD AND EVIL.

IN THE EVERYDAY discourse of men there seems to be a core of agreement about the meaning of the words happy and happiness This common understanding has been used by philosophers like Aristotle and Mill to test the adequacy of any definition of happiness

When a man says I feel happy he is saying that he feels pleased or satisfied—that he has what he wants When men contrast tragedy and happiness they have in mind the quality a life takes from its end A tragedy on the stage in fiction or in life is popularly characterized as a story without a happy ending This expresses the general sense that happiness is the quality of a life which comes out well on the whole despite difficulties and vicissitudes along the way Only ultimate defeat or frustration is tragic

There appears to be some conflict here between *feeling* happy at a given moment and *being* happy for a lifetime that is living happily It may be necessary to choose between having a good time and leading a good life Nevertheless in both uses of the word happy there is the connotation of satisfaction When men say that what they want is happiness they imply that having it they would ask for nothing more If they are asked why they want to be

appy they find it difficult to give any reason except for its own sake. They can think of no aim beyond happiness for which happiness serves as a means or a preparation. This aspect of ultimacy or finality appears without qualification in the sense of happiness as belonging to a whole life. There is quiescence too in the momentary feeling of happiness but precisely because it does not last it leaves another and another such moment to be desired.

Observing these facts Aristotle takes the word happiness from popular discourse and gives it the technical significance of ultimate good last end or *summum bonum*. The chief good he writes is evidently something final. Now we call that which is in itself worthy of pursuit more final than that which is worthy of pursuit for the sake of something else and that which is never desirable for the sake of something else more final than the things that are desirable both in themselves and for the sake of that other thing. Therefore we call final without qualification that which is always desirable in itself and never for the sake of something else. Such a thing happiness above all else is held to be for this we choose always for itself and never for the sake of something else.

The ultimacy of happiness can also be expressed in terms of its completeness or sufficiency. It would not be true that happiness is desired for its own sake and everything else for the sake of happiness, if the happy man wanted something more. The most abiding mark of the happy man according to Aristotle is that he wants for nothing. The happy life leaves nothing to be desired. It is this insight which Boethius later expresses in an oft repeated characterization of happiness as a life made perfect by the possession in aggregate of all good things. So considered happiness is not a particular good in itself but the sum of goods. If happiness were to be counted as one good among others Aristotle argues it would clearly be made more desirable by the addition of even the least of goods. But then there would be some thing left for the happy man to desire and happiness would not be something final and self-sufficient and the end of action.

Like Aristotle Mill appeals to the common sense of mankind for the ultimacy of happiness.

The utilitarian doctrine he writes is that happiness is desirable and the only thing desirable as an end all other things being only desirable as means. No reason can or need be given why this is so except that each person so far as he believes it to be attainable desires his own happiness. This is enough to prove that happiness is a good. To show that it is the good it is necessary to show not only that people desire happiness but that they never desire anything else.

Here Mill's answer like Aristotle's presupposes the rightness of the prevailing sense that when a man is happy he has everything he desires. Many things Mill admits may be desired for their own sake but if the possession of any one of these leaves something else to be desired then it is desired only as a part of happiness. Happiness is a concrete whole and these are some of its parts. Whatever is desired otherwise than as a means to some end beyond itself and ultimately to happiness is desired as itself a part of happiness and is not desired for itself until it has become so.

THERE ARE OTHER conceptions of happiness. It is not always approached in terms of means and ends utility and enjoyment or satisfaction. Plato for example identifies happiness with spiritual well-being—a harmony in the soul an inner peace which results from the proper order of all the soul's parts.

Early in the *Republic* Socrates is challenged to show that the just man will be happier than the unjust man even if in all externals he seems to be at a disadvantage. He cannot answer this question until he prepares Glaucon for the insight that justice is concerned not with the outward man but with the inward. He can then explain that the just man does not permit the several elements within him to interfere with one another. He is in order his own inner life and is his own master and his own law and is at peace with himself.

In the same spirit Plotinus asks us to think of two wise men one of them possessing all that is supposed to be naturally welcome while the other meets only with the very reverse. He wants to know whether we would assert that they have an equal happiness. His own answer is that we should if they are equally

wise [even] though the one be favored in body and in all else that does not help towards wisdom We are likely to misconceive happiness Plotinus thinks if we consider the happy man in terms of our own feebleness We count alarming and grave what his felicity takes lightly he would be neither wise nor in the state of happiness if he had not quitted all trifling with such things

According to Plotinus Plato rightly taught that he who is to be wise and to possess happiness draws his good from the Supreme fixing his gaze on That becoming like to That living by That All else he will attend to only as he might change his residence not in expectation of any increase in his settled felicity but simply in a reasonable attention to the differing conditions surrounding him as he lives here or there If he meets some turn of fortune that he would not have chosen there is not the slightest lessening of his happiness for that Like Plato Plotinus holds that nothing external can separate a virtuous man from happiness—that no one can injure a man except himself

The opposite view is more frequently held In his argument with Callicles in the *Gorgias* Socrates meets with the proposition that it is better to injure others than to be injured by them This can be refuted he thinks only if Callicles can be made to understand that the unjust or vicious man is miserable in himself regardless of his external gains The fundamental principle he says is that the happy are made happy by the possession of justice and temperance and the miserable miserable by the possession of vice Happiness is one with justice because justice or virtue in general is the health and beauty and well being of the soul

This association of happiness with health—the one a harmony in the soul as the other is a harmony in the body—appears also in Freud's consideration of human well being For Freud the ideal of health not merely bodily health but the health of the whole man seems to identify happiness with peace of mind Anyone who is born with a specially unfavorable instinctual constitution he writes and whose libido-components do not go through the transformation and modification necessary for suc-

cessful achievement in later life will find it hard to obtain happiness The opposite of happiness is not tragedy but neurosis In contrast to the neurotic the happy man has found a way to master his inner conflicts and to become well adjusted to his environment

The theory of happiness as mental health or spiritual peace may be another way of seeing the self sufficiency of happiness in which all striving comes to rest because all desires are fulfilled or quieted The suggestion of this point is found in the fact that the theologians conceive beatitude or supernatural happiness in both ways For them it is both an ultimate end which satisfies all desires and also a state of peace or heavenly rest

The ultimate good Augustine writes is that for the sake of which other things are to be desired while it is to be desired for its own sake and he adds it is that by which the good is finished so that it becomes complete—all satisfying But what is this final blessedness, the ultimate consummation the unending end? It is peace Indeed Augustine says

we are said to be blessed when we have such peace as can be enjoyed in this life but such blessedness is mere misery compared to that final felicity which can be described as either peace in eternal life or eternal life in peace

THERE MAY BE differences of another kind among those who regard happiness as their ultimate end Some men identify happiness with the possession of one particular type of good—wealth or health pleasure or power knowledge or virtue honor or friendship—or if they do not make one or another of these things the only component of happiness they make it supreme The question of which is chief among the various goods that constitute the happy life is the problem of the order of goods to which we shall return presently But the identification of happiness with some one good to the exclusion or neglect of the others seems to violate the meaning of happiness on which there is such general agreement Happiness cannot be that which leaves nothing to be desired if any good—anything which is in any way desirable—is overlooked

But it may be said that the miser desires nothing but gold and considers himself happy

when he possesses a board. That he may consider himself happy cannot be denied. Yet this does not prevent the moralist from considering him deluded and in reality among the unhappier of men. The difference between such illusory happiness and the reality seems to depend on the distinction between conscious and natural desire. According to that distinction considered in the chapter on Desire, the man may have all that he consciously desires, but lack many of the things toward which his nature tends and which are therefore objects of natural desire. He may be the unhappiest of men if with all the wealth in the world yet self-deprived of friends or knowledge virtue or even health his exclusive interest in one type of good leads to the frustration of many other desires. He may not consciously recognize these but they nevertheless represent needs of his nature demands fulfillment.

As suggested in the chapter on Desire, the relation of natural law to natural desire may provide the beginning, at least of an answer to Kant's objection to the ethics of happiness on the ground that its principles lack universality or the element of obligation. The natural moral law may command obedience at the same time that it directs men to happiness as the satisfaction of all desires which represent the innate tendencies of man's nature. The theory of natural desire thus also has a bearing on the issue whether the content of happiness must really be the same for all men regardless of how it may appear to them.

Even if men do not identify happiness with one type of good but see it as the possession of every sort of good can there be a reasonable difference of opinion concerning the types of good which must be included in the order in which these several goods should be sought? A negative answer seems to be required by the view that real as opposed to apparent goods are the objects of natural desire.

Aquinas, for example admits that "*happy is the man who has all he desires or whose every wish is fulfilled*" is a good and adequate definition only if it be understood in a certain way. It is an inadequate definition if understood in another. For if we understand it simply of all that man desires by his natural appetite then it is true that he who has all that he desires

is happy since nothing satisfies man's natural desire except the perfect good which is Happiness. But if we understand it of those things that man desires according to the apprehension of reason Aquinas continues, then it does not belong to Happiness to have certain things that man desires rather does it belong to un-happiness, in so far as the possession of such things hinders a man from having all that he desires naturally. For this reason Aquinas points out when Augustine approved the statement that *happy is he who has all he desires* he added the words *provided he desires nothing amiss*.

As men have the same complex nature so they have the same set of natural desires. As they have the same natural desires, so the real goods which can fulfill their needs comprise the same variety for all. As different natural desires represent different parts of human nature—lower and higher—so the several kinds of good are not equally good. And according to Aquinas, if the natural object of the human will is the universal good it follows that "naught can satisfy man's will save the universal good." This, he holds, is to be found not in any created thing but in God alone.

We shall return later to the theologian's conception of perfect happiness as consisting in the vision of God in the life hereafter. The happiness of this earthly life (which the philosopher considers) may be imperfect by comparison, but such temporal felicity as men can attain is no less determined by natural desire. If a man's undue craving for one type of good can interfere with his possession of another sort of good then the various goods must be ordered according to their worth and this order since it reflects natural desire must be the same for all men. In such terms Aristotle seems to think it possible to argue that the reality of happiness can be defined by reference to human nature and that the rules for achieving happiness can have a certain universality—despite the fact that the rules must be applied by individuals differently to the circumstances of their own lives. No particular good should be sought excessively or out of proportion to others, for the penalty of having too much of one good thus is deprivation or disorder with respect to other goods.

wise [even] though the one be favored in body and in all else that does not help towards wisdom We are likely to misconceive happiness Plotinus thinks if we consider the happy man in terms of our own feebleness We count alarming and grave what his felicity takes lightly he would be neither wise nor in the state of happiness if he had not quitted all trifling with such things

According to Plotinus Plato rightly taught that he who is to be wise and to possess happiness draws his good from the Supreme fixing his gaze on That becoming like to That living by That All else he will attend to only as he might change his residence not in expectation of any increase in his settled felicity but simply in a reasonable attention to the differing conditions surrounding him as he lives here or there If he meets some turn of fortune that he would not have chosen there is not the slightest lessening of his happiness for that Like Plato Plotinus holds that nothing external can separate a virtuous man from happiness—that no one can injure a man except himself

The opposite view is more frequently held In his argument with Callicles in the *Gorgias* Socrates meets with the proposition that it is better to injure others than to be injured by them This can be refuted he thinks only if Callicles can be made to understand that the unjust or vicious man is miserable in himself regardless of his external gains The fundamental principle he says is that the happy are made happy by the possession of justice and temperance and the miserable miserable by the possession of vice Happiness is one with justice because justice or virtue in general is the health and beauty and well being of the soul

This association of happiness with health—the one a harmony in the soul as the other is a harmony in the body—appears also in Freud's consideration of human well being For Freud the ideal of health not merely bodily health but the health of the whole man seems to identify happiness with peace of mind Anyone who is born with a specially unfavorable instinctual constitution he writes and whose libido-components do not go through the transformation and modification necessary for suc-

cessful achievement in later life will find it hard to obtain happiness The opposite of happiness is not tragedy but a *urosis* In contrast to the neurotic the happy man has found a way to master his inner conflicts and to become well adjusted to his environment

The theory of happiness as mental health or spiritual peace may be another way of seeing the self sufficiency of happiness in which all striving comes to rest because all desires are fulfilled or quieted The suggestion of this point is found in the fact that the theologians conceive beatitude or supernatural happiness in both ways For them it is both an ultimate end which satisfies all desires and also a state of peace or heavenly rest

The ultimate good Augustine writes, is that for the sake of which other things are to be desired while it is to be desired for its own sake and he adds it is that by which the good is finished so that it becomes complete—all satisfying But what is this final blessedness, the ultimate consummation the unending end? It is peace Indeed Augustine says, "we are said to be blessed when we have such peace as can be enjoyed in this life but such blessedness is mere misery compared to that final felicity which can be described as *eternal peace in eternal life or eternal life in peace*"

THERE MAY BE differences of another kind among those who regard happiness as their ultimate end Some men identify happiness with the possession of one particular type of good—wealth or health pleasure or power knowledge or virtue honor or friendship—or if they do not make one or another of these things the only component of happiness they make it supreme The question of which is chief among the various goods that constitute the happy life is the problem of the order of goods to which we shall return presently But the identification of happiness with some one good to the exclusion or neglect of the others seems to violate the meaning of happiness on which there is such general agreement Happiness cannot be that which leaves nothing to be desired if any good—anything which is in any way desirable—is overlooked

But it may be said that the miser desires nothing but gold and considers himself happy

when he possesses a hoard. That he may consider himself happy cannot be denied. Yet this does not prevent the moralist from considering him deluded and in reality among the unhappiest of men. The difference between such illusory happiness and the reality seems to depend on the distinction between conscious and natural desire. According to that distinction considered in the chapter on Desire, the miser may have all that he consciously desires but lack many of the things toward which his nature tends and which are therefore objects of natural desire. He may be the unhappiest of men if with all the wealth in the world yet self-deprived of friends or knowledge virtue or even health his exclusive interest in one type of good leads to the frustration of many other desires. He may not consciously recognize these but they nevertheless represent needs of his nature demanding fulfillment.

As suggested in the chapter on Desire the relation of natural law to natural desire may provide the beginning at least of an answer to Kant's objection to the ethics of happiness on the ground that its principles lack universality or the element of obligation. The natural moral law may command obedience at the same time that it directs men to happiness as the satisfaction of all desires which represent the innate tendencies of man's nature. The theory of natural desire thus also has a bearing on the issue whether the content of happiness must really be the same for all men regardless of how it may appear to them.

Even if men do not identify happiness with one type of good but see it as the possession of every sort of good can there be a reasonable difference of opinion concerning the types of good which must be included or the order in which these several goods should be sought? A negative answer seems to be required by the view that real as opposed to apparent goods are the objects of natural desire.

Aquinas for example admits that *happy is the man who has all he desires or whose every wish is fulfilled* is a good and adequate definition of *happiness* if it be understood in a certain way. It is an inadequate definition if understood in another. For if we understand it simply of all that man desires by his natural appetite then it is true that he who has all that he desires

is happy since nothing satisfies man's natural desire except the perfect good which is happiness. But if we understand it of those things that man desires according to the apprehension of reason Aquinas continues then it does not belong to Happiness to have certain things that man desires rather does it belong to unhappiness in so far as the possession of such things hinders a man from having all that he desires naturally. For this reason Aquinas points out when Augustine approved the statement that *happy is he who has all he desires* he added the words *provided he desires nothing amiss*.

As men have the same complex nature so they have the same set of natural desires. As they have the same natural desires so the real goods which can fulfill their needs comprise the same variety for all. As different natural desires represent different parts of human nature—lower and higher—so the several kinds of good are not equally good. And according to Aquinas if the natural object of the human will is the universal good it follows that naught can satisfy man's will save the universal good. This he holds is to be found not in any created thing but in God alone.

We shall return later to the theologian's conception of perfect happiness as consisting in the vision of God in the life hereafter. The happiness of this earthly life (which the philosopher considers) may be imperfect by comparison, but such temporal felicity as men can attain is no less determined by natural desire. If a man's undue craving for one type of good can interfere with his possession of another sort of good then the various goods must be ordered according to their worth and this order since it reflects natural desire must be the same for all men. In such terms Aristotle seems to think it possible to argue that the reality of happiness can be defined by reference to human nature and that the rules for achieving happiness can have a certain universality—despite the fact that the rules must be applied by individuals differently to the circumstances of their own lives. No particular good should be sought excessively or of proportion to others for the penalty of having too much of one good thing is deprivation or disorder with respect to other goods.

wise [even] though the one be favored in body and in all else that does not help towards wisdom We are likely to misconceive happiness Plotinus thinks if we consider the happy man in terms of our own feebleness We count alarming and grave what his felicity takes lightly he would be neither wise nor in the state of happiness if he had not quitted all trifling with such things

According to Plotinus Plato rightly taught that he who is to be wise and to possess happiness draws his good from the Supreme fixing his gaze on That becoming like to That living by That All else he will attend to only as he might change his residence not in expectation of any increase in his settled felicity but simply in a reasonable attention to the differing conditions surrounding him as he lives here or there If he meets some turn of fortune that he would not have chosen there is not the slightest lessening of his happiness for that Like Plato Plotinus holds that nothing external can separate a virtuous man from happiness—that no one can injure a man except himself

The opposite view is more frequently held In his argument with Callicles in the *Gorgias* Socrates meets with the proposition that it is better to injure others than to be injured by them This can be refuted he thinks only if Callicles can be made to understand that the unjust or vicious man is miserable in himself regardless of his external gains The fundamental principle he says is that the happy are made happy by the possession of justice and temperance and the miserable miserable by the possession of vice Happiness is one with justice because justice or virtue in general is the health and beauty and well being of the soul

This association of happiness with health—the one a harmony in the soul as the other is a harmony in the body—appears also in Freud's consideration of human well being For Freud the ideal of health not merely bodily health but the health of the whole man seems to identify happiness with peace of mind Anyone who is born with a specially unfavorable instinctual constitution he writes and whose libido-components do not go through the trans formation and modification necessary for suc

The ultimate good Augustine writes is that for the sake of which other things are to be desired while it is to be desired for its own sake and he adds it is that by which the good is finished so that it becomes complete—all satisfying But what is this final blessedness the ultimate consummation the unending end? It is peace Indeed Augustine says we are said to be blessed when we have such peace as can be enjoyed in this life but such blessedness is mere misery compared to that final felicity which can be described as either peace in eternal life or eternal life in peace

THERE MAY BE differences of another kind among those who regard happiness as their ultimate end Some men identify happiness with the possession of one particular type of good—wealth or health pleasure or power knowledge or virtue honor or friendship—or if they do not make one or another of these things the only component of happiness they make it supreme The question of which is chief among the various goods that constitute the happy life is the problem of the order of goods to which we shall return presently But the identification of happiness with some one good to the exclusion or neglect of the others seems to violate the meaning of happiness on which there is such general agreement Happiness cannot be that which leaves nothing to be desired if any good—anything which is in any way desirable—is overlooked

But it may be said that the miser desires nothing but gold and considers himself happy

set as an obstacle to happiness. Pierre Bezuhko in *Il'ya i Peter* learned during his period of captivity that man is created for happiness that happiness lies in himself, in the satisfaction of his natural human cravings; that all unhappiness arises not from privation but from superfluous."

The vicissitudes of fortune seem to be what Cola has in mind when, as reported by Herodotus, he tells Croesus, the king of Lydia that he will not call him happy "until I hear that thou hast closed thy life happily—for often times God gives men a gleam of happiness, and then plucks them into ruin. For this reason, I judge of happiness, as 'in every matter it behoves us to mark well the end.'

Even if it is possible to call a man happy while he is still alive—on the ground that virtue which swishes his power may be able to withstand anything but the most outrageous fortune—it is still necessary to define happiness by reference to a complete life. Children cannot be called happy Aristotle holds, because their characters have not yet matured and their lives are still too far from completion. To call them happy or to call happy men of any age who still may suffer great misfortune is merely to race the bones we have for them. The most prosperous, Aristotle writes, may fall into great misfortunes as old as is told of Phaethon in the Trojan cycle and one who has experienced such chances and has ended wretchedly does not call happy.

Among the goods of fortune which seem to have a bearing on the attainment of happiness, those which constitute the *individual* nature of a human being at birth—physical traits, temperament, degree of intelligence—may be unchangeable in the course of life. If certain inherent conditions either limit the capacity for happiness or make it completely unattainable, then happiness, which is defined as the end of man, is no the *sufficient factor* for all, or not for all in the same way.

In the Aristotelian view for example, women cannot be happy to the same degree or in the same manner as men, and natural slaves, like beasts, have no capacity for happiness at all, though they can participate in the happiness of the masters they serve. The theory is that through serving him, the slave gets even the master

the leisure necessary for the political or speculative life open to those of auspicious birth. Even as the man who is a slave belongs wholly to another man so the highest good of his life lies in his contribution to the happiness of that other.

The question whether happiness can be achieved by all normal human beings or only by those gifted with very special talents, depends for its answer in part on the conception of happiness itself. Like Aristotle Spinoza places happiness in intellectual activity of so high an order that the happy man is almost godlike and at the very end of his *Ethics* he finds it necessary to say that the way to happiness must indeed be difficult since it is so seldom discovered. Nevertheless, "true peace of soul" can be found by the rare individual. "All noble things are as difficult as they are rare." In contrast a statement like Tawney's—that "if a man has important work to do, and enough leisure and income to enable him to do it properly, he is in possession of as much happiness as is good for any of the children of Adam"—seems to make happiness available to more than the gifted few.

Whether happiness is attainable by all men, even on Tawney's definition, may also depend on the economic system and the political constitution, to the extent that they determine whether all men will be granted the opportunity and the leisure to use whatever talents they have for leading a decent human life. There seems to be a profound connection between conceiving happiness in such a way that all normal men are capable of it and insisting that all normal men deserve political status and economic liberty. Mill, for example, differs from Aristotle on both scores.

Differing from the position of both Aristotle and Mill is the view that happiness is an illusory goal—that the besetting ills of human life as well as the frailty of men lead inevitably to tragedy. The great tragic poems and the great tragedians of history may, of course, be read as if they deal with the exceptional case but an other interpretation is possible. Here we large in the life of the hero, the great or famous man, is the tragic pattern of human life which is the lot of all men.

THE RELATION OF happiness to particular goods raises a whole series of questions each peculiar to the type of good under consideration. Of these the most insistent problems concern pleasure knowledge virtue and the goods of fortune.

With regard to pleasure the difficulty seems to arise from two meanings of the term which are more fully discussed in the chapter on PLEASURE AND PAIN. In one of these meanings pleasure is an object of desire and in the other it is the feeling of satisfaction which accompanies the possession of objects desired. It is in the latter meaning that pleasure can be identified with happiness or at least be regarded as its correlate for if happiness consists in the possession of all good things it is also the sum total of attainable satisfactions or pleasures. Where pleasure means satisfaction pain means frustration not the sensed pain of injured flesh. Happiness Locke can therefore say is the utmost pleasure we are capable of and Mill can define it as an existence exempt as far as possible from pain and as rich as possible in enjoyments. Nor does Aristotle object to saying that the happy life is also in itself pleasant.

But unlike Locke and Mill Aristotle raises the question whether all pleasures are good and all pains evil. Sensuous pleasure as an object often conflicts with other objects of desire. And if pleasure means satisfaction there can be conflict among pleasures for the satisfaction of one desire may lead to the frustration of another. At this point Aristotle finds it necessary to introduce the principle of virtue. The virtuous man is one who finds pleasure in the things that are by nature pleasant. The virtuous man takes pleasure only in the right things and is willing to suffer pain for the right end. If pleasures or desires and their satisfaction can be better or worse there must be a choice among them for the sake of happiness. Mill makes this choice depend on a discrimination between lower and higher pleasures not on virtue. He regards virtue merely as one of the parts of happiness in no way different from the others. But Aristotle seems to think that virtue is the principal means to happiness because it regulates the choices which must be rightly made in order to obtain all good things hence his definition of happiness as activity in accordance with virtue.

This definition raises difficulties of still another order. As the chapter on VIRTUE AND VICE indicates there are for Aristotle two kinds of virtue moral and intellectual the one concerned with desire and social conduct the other with thought and knowledge. There are also two modes of life sometimes called the active and the contemplative differing as a life devoted to political activity or practical tasks differs from a life occupied largely with theoretic problems in the pursuit of truth or in the consideration of what is known. Are the two kinds of happiness then belonging respectively to the political and the speculative life? Is one a better kind of happiness than another? Does the practical sort of happiness require intellectual as well as moral virtue? Does the speculative sort require both?

In trying to answer these questions and generally in shaping his definition of happiness Aristotle considers the role of the goods of fortune such things as health wealth auspicious birth native endowments of body or mind and length of life. These gifts condition various activity or may present problems which virtue is needed to solve. But to the extent that having or not having them is a matter of fortune they are not within a man's control—to get, keep or give up. If they are indispensable happiness is precarious or even unattainable by those who are unfortunate. In addition the goods of fortune are indispensable the definition of happiness must itself be qualified. More is required for happiness than activity in accordance with virtue.

Should we not say Aristotle asks that he is happy who is active in accordance with complete virtue and is sufficiently equipped with external goods not for some chance period but throughout a complete life? Or must we add and who is destined to live thus and die as befits his life? If so we shall call happy those among living men in whom these conditions are and are to be fulfilled—but happy men.

THE CONSIDERATION of the goods of fortune has led to diverse views about the attainability of happiness in this life. For one thing they may

"eternal," Aquinas describes as "the self-city of a life which is done with bondage"—to vice or conflict to vice and change. In contrast the best human life on earth is miserable with fluctuations and an anxiety that human nature cannot escape.

The doctrine of immortality is of much importance in the theological consideration of happiness. For man's immortality is a necessary condition of the soul's infinite progress toward the moral perfection, the holiness, which alone deserves perfect happiness. But for theologians like Aquinas and Aquinas, neither change nor progress play any part in immortal life. On the contrary the immortal soul finds its salva in a eternal rest. The difference between motion and rest, between time and eternity belongs to the very essence of the theologian's distinction between imperfect happiness on earth and perfect happiness hereafter.

These matters, of relevance to the theory of happiness, are discussed in the chapters on Eternity and Immortality and in the chapter on Sin we find another religious dogma, that of original sin, which has an obvious bearing on earthly happiness as well as on eternal salvation. Fallen human nature according to Christian truth... is incompetent to achieve even the natural end of imperfect temporal happiness without God's help. Milon expounds this doctrine of indispensable grace in *Prud. & Log.* in words which God the Father addresses to His Son:

Man shall not quite be lost, but said who can,  
Yet not of will in him, but grace in me  
First outcast once more I will renew  
His lost powers, thou hast lost and enthrall'd  
Me so to feel earthly joys  
I uphold by me, yet once more I shall stand  
On even ground against his mortal foe.  
Be it as it is, that he may know how frail  
His fall's condition is, and to me owe  
All his del'rance and to none but me.

God's grace is needed for men to lead a good life on earth as well as for eternal blessedness. On earth man's efforts to be virtuous require the concomitant of supernatural gifts—faith, hope and charity and the infused moral virtues. The beatific vision in Heaven totally exceeds the natural powers of the soul and comes with the gift of added supernatural light. It seems, in short, that there is no purely natural

happiness according to the strict tenets of Christian doctrine.

Aquinas employs the conception of eternal beatitude not only to measure the imperfection of earthly life but also to insist that temporal happiness is happiness at all only to the extent that it is a remote participation of true and perfect happiness. It cannot be said of temporal happiness that it "excludes every evil and fulfills every desire." In this life every evil cannot be excluded. For this present life is subject to many unavoidable evils, to ignorance on the part of the intellect, to inordinate affection on the part of the appetite and to many penalties on the part of the body. Likewise "Aquinas continues, "neither can the desire for good be satisfied in this life. For man naturally desires the good which he has to be abiding. Now the goods of the present life pass away since life itself passes away. Wherefore it is impossible to have true happiness in this life."

If perfect happiness does not in "the vision of the Divine Essence which men cannot obtain in this life" then, according to Aquinas, only the earthly life which somehow partakes of God has a measure of happiness in it. Earthly happiness, imperfect because of its temporal and bodily conditions, coexists in a life devoted to God—a kind of inchoate participation here and now of the beatific vision hereafter. On earth there can be only a beginning "in respect of that operation whereby man is united to God."

In the present life in as far as we fall short of the unity and continuance of that operation, so do we fall short of perfect happiness. Nevertheless it is a participation of happiness and so much the greater as the operation can be more continuous and more on. Consequently the active life which is busy with many things, has less of happiness than the contemplative life which is busied with one thing, i.e., the contemplation of truth."

When the theologians consider the modes of life on earth in terms of the fundamental distinction between the secular and the religious, or the active and the contemplative they seem to admit the possibility of imperfect happiness in either mode. In either a devout Christian dedicates every act to the glory of God, and through such dedication embraces the divine in the passing moments of his earthly pilgrimage.

Sophocles seems to be saying this when he writes in *Oedipus at Colonus*. Not to be born is past all prizeing best but when a man hath seen the light this is next best by far that with all speed he should go thither whence he hath come. For when he hath seen youth go by with its light follies what troublous affliction is strange to his lot what suffering is not therein? —envy factions strife battles and slaughters and last of all age claims him for her own—age dispraised infirm unsociable unfriended with whom all woe of woe abides.

Death is sometimes regarded as the symbol of tragic frustration. Sometimes it is not death but the fear of death which overshadows life, so that for Montaigne learning how to face death well seems indispensable to living well.

The very felicity of life itself he writes which depends upon the tranquility and contentment of a well descended spirit and the resolution and assurance of a well ordered soul ought never to be attributed to any man till he has first been seen to play the last and doubtless the hardest act of his part. There may be disguise and dissimulation in all the rest but in this scene of death there is no more counterfeiting we must speak out plain and discover what there is of good and clean in the bottom of the pot.

So too for Lucretius what happiness men can have depends on their being rid of the fear of death through knowing the causes of things. But neither death nor the fear of death may be the crucial flaw. It may be the temporal character of life itself.

It is said that happiness consists in the possession of all good things. It is said that happiness is the quality of a whole life not the feeling of satisfaction for a moment. If this is so then Solon's remark to Croesus can be given another meaning namely that happiness is not some thing actually enjoyed by a man at any moment of his life. Man can come to possess all good things only in the succession of his days not simultaneously and so happiness is never actually achieved but is always in the process of being achieved. When that process is completed the man is dead his life is done.

It may still be true that to live well or virtuously—with the help of fortune—is to live happily but so long as life goes on happiness is

pursued rather than enjoyed. On earth and in time man does not seem able to come to rest any final satisfaction with all his desires just at once and forever by that vision of perfectness which would deserve Faust's *Stay thou art so fair!*

As ALREADY INTIMATED the problem of human happiness takes on another dimension when it is treated by the Christian theologians. The happiness which men can have on earth and in time is according to Augustine rather the solace of our misery than the positive enjoyment of felicity.

Our very righteousness he goes on to say though true in so far as it has respect to the true good is yet in this life of such a kind that it consists rather in the remission of sins than in the perfecting of virtues. For as reason though subjected to God is yet pressed down by the corruptible body so long as it is in the mortal condition it has not perfect authority over vice. For though it exercises authority the vices do not submit without a struggle. For however well one maintains the conflict and however thoroughly he has subdued these enemies there steals in some evil thing which if it do not find ready expression in act slips out by the lips or insinuates itself into the thought and therefore his peace is not full so long as he is at war with his vices.

Accepting the definition of happiness as the possession of all good things and the satisfaction of all desires the theologians compare the successive accumulation of finite goods with the unchanging enjoyment of an infinite good. An endless prolongation of the days of our mortal life would not increase the chances of becoming perfectly happy because time and change permit no rest no finality. Earthly happiness is therefore intrinsically imperfect.

Perfect happiness belongs to the eternal life of the immortal soul completely at rest in the beatific vision for in the vision of God the soul is united to the infinite good by knowledge and love. In the divine presence and glory all the natural desires of the human spirit are simultaneously satisfied—the intellect's search for truth and the will's yearning for the good.

That final peace to which all our righteousness has reference and for the sake of which it is

## REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 Hesiod II ad κ 11 [26, 28] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

P 22 Section 5 When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example in 53 I see Psychology 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a, a, d, b refer to the upper and lower halves of the left hand side of the page and c, d to the upper and lower half of the right hand side of the page. For example in 7 PLATO Symposia m 163b-164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 163.

A TH DIVISIONS One or more of the main divisions of a work (such as PART BK CH etc.) are sometimes included in the reference. Line numbers, in brackets, are given in certain cases e.g. I'ad BK 11 [26, 28] 12d.

BIBL REFERENCES The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay added by a (D) follows e.g. OLD TESTAMENT Nehemiah 7:45-(D) II Esd 2:7:46

SIGNS The bb elevation esp calls the reader's attention to one or more especially relevant parts of a whole reference. passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of references, see the Explanation of References Style. For general guidance in the use of The Great Ideas consult the Preface.

## OUTLINE OF TOPICS

1 The desire for happiness its naturalness and universality	62
2 The understanding of happiness definitions and myths	63
2a The marks of a happy man the quality of a happy life	63
2b The content of a happy life the parts or constituents of happiness	64
(1) The contribution of the goods of fortune to happiness wealth health long life	64
(2) Pleasure and happiness	65
(3) Virtue in relation to happiness	65
(4) The role of honor in happiness	66
(5) The importance of friendship and love for happiness	67
(6) The effect of political power or status on happiness	67
(7) The function of knowledge and wisdom in the happy life the place of speculative activity and contemplation	68
3 The argument concerning happiness as a first principle of morality the conflicting claims of duty and happiness	69
4 The pursuit of happiness	
4a Man's capacity for happiness differences in human nature with respect to happiness	70
4b The attainability of happiness the fear of death and the tragic view of human life	70
5 The social aspects of happiness the doctrine of the common good	71
5a The happiness of the individual in relation to the happiness or good of other men	71
5b The happiness of the individual in relation to the welfare of the state happiness in relation to government and diverse forms of government	72
6 The happiness of men in relation to the gods or the after life	73
7 The distinction between temporal and eternal happiness	
7a The effects of original sin the indispensability of divine grace for the attainment of natural happiness	73
7b The imperfection of temporal happiness its failure to satisfy natural desire	74
7c Eternal beatitude the perfection of human happiness	
(1) The beatific vision	75
(2) The joy of the blessed the communion of saints	75
(3) The misery of the damned	76
7d The beatitude of God	77

# Chapter 34. HISTORY

## INTRODUCTION

In our language the term *Historia*, "History," Herodotus observes, unites the objective with the subjective side. It comprehends not less what has happened than the narration of what has happened. This union of the two meanings we must regard as of a higher order than mere outward accident; we must suppose historical narrations to have appeared contemporaneously with historical deeds and events.

Our daily speech confirms Hegel's observation that history refers to that which has happened as well as to the record of it. We speak of the history of a people or a nation, or of the great events and epochs of history, and we also call a history the book which gives a narrative account of these matters.

It is as if we used the word physics to name both the object of study and the science of that object, whereas normally we tend to use physics for the science and refer to its subject matter as the physical world. We do not say that matter in motion is physics but that it is the object of physics, not of the things a physicist studies. We might similarly have adopted the convention of using "history" in a restricted sense to signify a kind of knowledge or a kind of writing and then called the phenomena written about or studied "historical" but not history.

That however is not the prevalent usage. The word history seems to have at least four distinct meanings. It refers to a kind of knowledge. It refers to a type of literature. It means an actual sequence of events in time which constitutes a process of irreversible change. This can be either change in the structure of the world or any part of nature or change in human affairs in society or civilization.

Historical knowledge and historical writing can be about natural history or human history. In his classification of the kinds of knowledge

Francis Bacon makes this distinction when he divides history into natural, civil, ecclesiastical and literary. Whereas the last three deal with human things, the first is concerned with the non-human part of the natural world. At the same time this natural history is not in Bacon's judgment the same thing as natural philosophy or what we would now call "natural science."

In this set of great books, natural history even cosmic history makes its appearance in works which we ordinarily classify as science or philosophy, for example Darwin's *Origin of Species*, Lucretius' *On the Nature of Things*, or Plato's *Timaeus*. The great books of history deal with man and society, not nature or the universe. For the most part this is true also of the great philosophies of history. They too, are primarily concerned with human civilization not the physical world.

In its original Greek root the word "history" means research and implies the act of judging the evidences in order to separate fact from fiction. The opening line of Herodotus is sometimes translated not "these are the histories of Herodotus of Halicarnassus" but "these are the researcher."

The word research can of course mean any sort of inquiry—into what is the case as well as into what has happened. The title of one of Aristotle's biological works, the *History of Animals*, suggests that it is concerned with researches about animals. The book does not deal with natural history; it is not a history of animals in the sense of giving the stages of their development in the course of time. The redundancy of "historical research" can therefore be excused on the ground that it is necessary to distinguish between two kinds of inquiry or research—scientific and historical.

- For The bearing of natural desire on the pursuit of happiness *see DESIRE* 2a 3a 5b *LOVE* 5a-51(1) *WILL* 7d  
 The relation of happiness to death and the fear of death *see IMMORTALITY I: LIFE AND DEATH* 8a-8c

The contrast between history and science—or what for the purpose of comparison may be the same philosophy—is formulated in Aristotle's statement concerning poetry that it is more philosophical than history because poetry tends to express the universal history of the particular. History deals with what has actually happened whereas poetry like philosophy may be concerned with whatever is or can be.

One comparison leads to another. Unlike poetry history and science are alike in that they both attempt to prove what they say. But in distinction from science or philosophy history resembles poetry especially the great epic and dramatic poems in being narrative literature. The historian and the poet both tell stories.

If the poet and the historian—including of course a biographer like Plutarch—are also moralists they are moralists in the same way. Their works do not contain expositions of ethical or political doctrine but rather concrete exemplifications of theories concerning the conduct of human life and social practices. That fact explains why much of the content of the great historical books is cited in other chapters dealing with moral and political even psychological topics. But in this chapter we are concerned with history itself rather than with the particulars of history. We are concerned with the methods and aims of history as a kind of knowledge and literature and we are concerned with the historical process as a whole the consideration of which belongs to the philosophy of history.

The aims and methods of writing history are discussed by the historian himself as well as by the philosopher. Philosophers like Hobbes, Bacon, or Descartes consider history largely from the point of view of the kind of knowledge it is and the contribution it makes to the whole of human learning. Historians like Herodotus, Thucydides, Tacitus, and Gibbon state more specifically the objectives of the work, the standards of reliability or authenticity by which they determine what is fact and the principles of interpretation by which they select the most important facts ordering them according to some hypothesis concerning the meaning of the events reported.

Herodotus writes he tells us "in the hope of preserving from decay the remembrance of what men have done and of preventing the great and wonderful actions of the Greeks and the barbarians from losing their due meed of glory." Thucydides proceeds in the belief that the war between the Peloponnesians and the Athenians was the greatest movement yet known in history not only of the Hellenes but of a large part of the barbarian world—I had almost said of mankind. Not very different is the declaration of Tacitus. My purpose is not to relate at length every motion but only such as were conspicuous for excellence or notorious for infamy. This I regard as history's highest function to let no worthy action be uncom memorated and to hold out the reprobation of posterity as a terror to evil words and deeds.

But though there seems to be a striking similarity in the purpose of these historians Tacitus alone of the three avows a moral purpose. Furthermore each of the three is conscious of the individual way in which he has put his intention into effect. Thucydides for example seems to have Herodotus in mind when he fears that the absence of romance in my history will detract somewhat from its interest but if it be judged useful by those inquirers who desire an exact knowledge of the past I shall be content. Like Thucydides Tacitus is an historian of contemporary events and he fears comparison with the historian of antiquity who can enchant and refresh a reader's mind with descriptions of countries the various incidents of battle glorious deaths of great generals. His own work may be instructive he thinks but it may also give very little pleasure because he has to present in succession the merciless bodings of a tyrant incessant prosecutions, faithless friendships, the ruin of innocence, the same causes issuing in the same results, and [he is] everywhere confronted with a wearisome monotony in [his] subject matter.

As we have already noted Herodotus seems satisfied to let the reader decide between conflicting accounts. Only occasionally does he indicate which is more likely in his own judgment. Thucydides claims that he has made a greater effort to determine the facts. I did not even trust my own impressions, he writes the narrative rests partly on what I saw myself partly

Originally research set the historian apart from the poet and the maker of myths or legends. They told stories too but only the historian restricted himself to telling a story based on the facts ascertained by inquiry or research. Herodotus deserves the title "father of history" for having originated a style of writing which differs from poetry in this extraordinary respect. He tries to win the reader's belief not by the plausibility of his narrative but rather by giving the reader some indication of the sources of information and the reliability of the evidence on which the narrative is based.

The poet tries to tell a likely story but the historian tries to make credible statements about particular past events. He makes an explicit effort to weigh the evidence himself or as Herodotus so frequently does to submit conflicting testimony to the reader's own judgment. Such is the account which the Persians give of these matters he writes but the Phoenicians vary from the Persian statements or this much I know from information given me by the Delphians the remainder of the story the Milesians add or that these were the real facts I learnt at Memphis from the priests of Vulcan or such is the truth of this matter I have also heard another account which I do not at all believe or again thus far I have spoken of Egypt from my own observation relating what I myself saw the ideas that I formed and the results of my own researches. What follows rests on accounts given me by the Egyptians which I shall now repeat adding thereto some particulars which fell under my own notice.

Herodotus seems quite conscious of the difference between himself and Homer especially on those matters treated by the poet which fall within his purview as an historian. The Trojan War lies in the background of the conflict with which Herodotus is directly concerned—the Persian invasion of Greece—for the Persians trace to the attack upon Troy their ancient enmity towards the Greeks.

Herodotus does not doubt that the siege of Troy took place as Homer relates but he learns from the Egyptians a legend about the landing of Paris and Helen on Egyptian soil and the detention of Helen by Proteus king of Memphis. Such is the tale told me by the priests con-

cerning the arrival of Helen at the court of Proteus. It seems to me that Homer was acquainted with this story and while discarding it because he thought it less adapted for epic poem than the version which he followed showed that it was not unknown to him.

Herodotus cites passages in the *Iliad* and the *Odyssey* to corroborate this point. He is willing to use the Homeric poems as one source of information but not without checking them against conflicting accounts. I made inquiry he writes whether the story which the Greeks tell about Troy is a fable or not. When it comes to the conclusion that Helen was never within the walls of the city to which the Greeks laid siege for ten years he tells the reader his reasons for thinking so. Homer however when he narrates Helen's actions during the siege does not bother to establish the facts of the matter or to give the reader contrary versions of what took place. That is not the poet's task as Herodotus recognizes. It belongs to the historian not the poet. The story which may have greater probability in fact may not be the better story for the poet.

SINCE HE IS BOTH an investigator and a story teller the historian stands comparison with the scientist in one respect and with the poet in another. The special character of history as a kind of knowledge distinct from science or philosophy seems clear from its object—the singular or unique events of the past. The scientist or philosopher is not concerned with what has happened but with the nature of things. Particular events may serve as evidence for him but his conclusions go beyond statement of particular fact to generalizations about the way things are or happen at any time and place. In contrast the historian's research begins and ends with particulars. He uses particulars directly observed by himself or testified to by others as the basis for circumstantial inference to matters which cannot be established by direct evidence. The method of investigation developed by the early historians may be the precursor of scientific method but the kind of evidence and the mode of argument which we find in Hippocrates or Plato indicate the divergence of the scientist and philosopher from the procedure of the historian.

even ages corresponding to the seven days of creation. "The first age as the first day extends from Adam to the deluge; the second from the deluge to Abraham. From Abraham to the advent of Christ there are as the Evangelist Matthew calculates, three periods, in each of which are fourteen generations—the period from Abraham to David a second from David to the captivity a third from the captivity to the birth of Christ in the flesh. There are thus five ages in all. The sixth is now passing and cannot be measured by any number of generations. After this period God shall rest as on the seventh day when He shall give us (who shall be the seventh day) rest in Himself. The seventh shall be our Sabbath which shall be brought to a close not by an even but by the Lord's day as an eighth and eternal day consecrated by the resurrection of Christ and prefigured, the eternal repositor not only of the spirit but also of the body.

This is what shall be in the end without end.

This same projection of history—in all its events, at least—is laid before Adam by the archangel Michael in Milton's *Paradise Lost* just before Adam leaves the Garden of Eden.

Unlike the four major dispensations of which Augustine and Milton speak, Hegel's four ages of the world are epochs in the development of Spirit as manifested in the State. They are secularly defined as the Oriental, the Greek, the Roman, and the German world and are seen as a process of the consciousness of Freedom. The various grades in the consciousness of Freedom, Hegel writes, supply us with the natural division of universal History. The Orientals have not attained the knowledge that Spirit—Man as such—is free and because they do not know this, they are not free. They only know that one is free—that one is therefore only a Despot, not a free man. The consciousness of Freedom first arose among the Greeks, and therefore they were free, but they and the Romans likewise knew only that some are free—not man as such. The Greeks, therefore had slaves and their whole life and the maintenance of their splendid liberty was implicated with the institution of slavery. The German nations, under the influence of

Christianity were the first to attain the consciousness that man as man is free.

With the complete emancipation of man in the German-Christian world history is consummated for Hegel. "The grand principle of being is realized, he declares, consequently the end of days is fully come." Another sign of the finality of the German-Christian world seems to be its reconciliation of Church and State. European history is the exhibition of the growth of each of these principles severally

than of an antithesis on the part of both lastly of the harmonizing of the antithesis. In the German-Christian world the secular and the religious modes of life are ultimately harmonized fused in a single order of rational Freedom.

As yet from the opposition between the philosophical and theological approaches here represented by Hegel and Augustine, there seem to be two main issues in the general theory of human history. The first concerns the pattern of change; the second the character of the causes at work.

The pattern most familiar because of its prevalence in modern speculations is that of progress or evolution. The progress may be conceived as a dialectical motion in the realm of Spirit, contrasted by Hegel with the realm of Matter or Nature according as the essence of Matter is Gravity and the essence of Spirit is Freedom. But it may also be thought to occur as in the dialectical materialism of Marx and Engels, through the resolution of conflicting material or economic forces.

"The whole history of mankind," Engels writes in his preface to the *Communist Manifesto*, since the dissolution of primitive tribal society holding land in common ownership has been a history of class struggles, contests between exploiting and exploited, ruling and oppressed classes. The history of these class strata forms a series of evolutions in which now and again a stage has been reached where the exploited and oppressed class, the proletariat cannot attain its emancipation from the sway of the exploiting and ruling class, the bourgeoisie, without at the same time and once for all emancipating society at large from all exploitation, oppression, class-distinction and

on what others saw for me the accuracy of the report being always tried by the most severe and detailed tests possible My conclusions have cost me some labor from the want of coincidence between the accounts of the same occurrences by different eye witnesses But he thinks that his conclusions may safely be relied on undisturbed either by the lays of a poet displaying the exaggeration of his craft or by the compositions of the chroniclers which are attractive at truth's expense

The historians are aware of the difficulty of combining truth telling with storytelling Most men Thucydides remarks are unwilling to take enough pains in the investigation of truth accepting readily the first story that comes to hand The difficulty according to Tacitus is the obscurity of the greatest events so that some take for granted any hearsay whatever its source others turn truth into falsehood and both errors find encouragement with posterity

Reviewing the enormous scope of his work Gibbon at the very end concludes that the historian may applaud the importance and variety of his subject but while he is conscious of his own imperfections he must often accuse the deficiency of his materials Because of the scarcity of authentic memorials he tells us in another place the historian finds it hard to preserve a clear and unbroken thread of narration Surrounded with imperfect fragments always concise often obscure and sometimes contradictory he is reduced to collect to compare and to conjecture and though he ought never to place his conjectures in the rank of facts yet the knowledge of human nature and of the sure operation of its fierce and unrestrained passions might on some occasions supply the want of historical materials

Clearly the historians have different criteria of relevance in determining the selection and rejection of materials and different principles of interpretation in assigning the causes which explain what happened These differences are reflected in the way each historian constructs from the facts a grand story conceives the line of its plot and the characterization of its chief actors Herodotus for example has been compared with Homer as writing in an epic manner Thucydides with the dramatic writers of

tragedy Even if they all agreed on the attainment of fact the great historians would differ from one another as the great poets do each has a style and a vision as personal and poetic as Homer or Virgil Melville or Tolstoi

ONLY ONE OF THE great books is by title and design devoted entirely to the philosophy of history—to the formulation of a theory which embraces the whole of man's career on earth This is Hegel's *Philosophy of History* Augustine's *City of God* presents an equally comprehensive vision but a comparison of the two suggests that they differ from one another as philosophy from theology

The point of this comparison is not that God and His providence are omitted from the philosopher's view On the contrary Hegel regards the history of the world as a process of development and the realization of Spirit—this is the true theodicy the justification of God in History Only this insight can reconcile Spirit with the History of the World—it is that what has happened and is happening every day is not only not without God but is essentially His Work

The difference is rather to be found in the ultimate source of insight concerning human development and destiny Augustine sees everything in the light of God's revelation of His plan in Holy Writ Hegel and other philosophers of history from Vico to Toynbee seek and sometimes claim to find in the records of history itself the laws which govern and the pattern which inheres in the procession of events from the beginning to the end of human time

For Augustine the great epochs of history are defined religiously They are stages in the development of the city of God on earth not the city of man Man is viewed as dwelling on earth under four distinct dispensations from God (1) in Paradise before the Fall (2) in the world after expulsion from Eden and before the Promise and the Law were given to the Jews (3) under the Law and before the coming of Christ (4) between the first and second coming under the dispensation of grace

Augustine sometimes makes other divisions of history but they are always primarily religious For example he divides all of time into

“ten ages, corresponding to the seven days of creation. The first age as the first day extends from Adam to the deluge; the second from the deluge to Abraham. From Abraham to the advent of Christ there are as the evangelist Matthew calculates, three periods, in each of which are fourteen generations—

Reviewing the enormous scope of his work Gibbon at the very end concludes that the historian may applaud the importance and variety of his subject but while he is conscious of his own imperfections he must often accuse the deficiency of his materials Because of the scarcity of authentic memorials he tells us in another place the historian finds it hard to preserve a clear and unbroken thread of narration Surrounded with imperfect fragments always concise often obscure and sometimes contradictory he is reduced to collect to compare and to conjecture and though he ought never to place his conjectures in the rank of facts yet the knowledge of human nature and of the sure operation of its fierce and unrestrained passions might on some occasions supply the want of historical materials

Clearly the historians have different criteria of relevance in determining the selection and rejection of materials and different principles of interpretation in assigning the causes which explain what happened These differences are reflected in the way each historian constructs from the facts a grand story conceives the line of its plot and the characterization of its chief actors Herodotus for example has been compared with Homer as writing in an epic manner Thucydides with the dramatic writers of

tragedy Even if they all agreed on the verity of fact the great historians would differ from one another as the great poets do each has a style and a vision as personal and poet as Homer or Virgil Melville or Tolstoy

ONLY ONE OF THE great books is by title and design devoted entirely to the philosophy of history—to the formulation of a theory which embraces the whole of man's career on earth This is Hegel's *Philosophy of History* Augustine's *City of God* presents an equally comprehensive vision but a comparison of the two suggests that they differ from one another as philosophy from theology

The point of this comparison is not that God and His providence are omitted from the philosopher's view On the contrary Hegel regards the history of the world as a process of development and the realization of Spirit—this is the true theodicy the justification of God in History Only this insight can reconcile Spirit with the History of the World—that what has happened and is happening every day is not only not without God but is essentially His Work

The difference is rather to be found in the ultimate source of insight concerning human development and destiny Augustine sees everything in the light of God's revelation of His plan in Holy Writ Hegel and other philosophers of history from Vico to Toynbee seek and sometimes claim to find in the records of history itself the laws which govern and the pattern which inheres in the procession of events from the beginning to the end of human time

For Augustine the great epochs of history are defined religiously They are stages in the development of the city of God on earth not the city of man Man is viewed as dwelling on earth under four distinct dispensations from God (1) in Paradise before the Fall (2) in the world after expulsion from Eden and before the Promise and the Law were given to the Jews (3) under the Law and before the coming of Christ (4) between the first and second coming under the dispensation of grace

Augustine sometimes makes other divisions of history but they are always primarily religious For example he divides all of time into

ven acts, corresponding to the seven days of creation. The first act was the first day ex-  
-tending from Adam to the deluge; the second  
was the deluge to Abraham. From Abra-  
ham to the advent of Christ there are as the  
evangelist Matthew calculates three periods,  
each of which are fourteen generations—  
a period from Abraham to David, a second  
from David to the captivity, a third from the  
captivity to the birth of Christ in the flesh.  
There are thus five acts in all. The sixth is now  
present and cannot be measured by any num-  
ber of generations. After this period God  
shall rest as on the seventh day when He shall  
give us (who shall be the seventh day) rest in  
Himself. The seventh shall be our Sabbath,  
which shall be brought to a close not by an  
evening but by the Lord's day as an etern-  
al and eternal day consecrated by the resurrec-  
tion of Christ and preparing the eternal re-  
pose not only of the spirit but also of the body.

This is what shall be in the end without  
end.

The same prediction of history—in all es-  
sentials, at least—is laid before Adam by  
the archangel Michael in Milton's *Paradise Lost* just before Adam leaves the Garden of  
Eden.

Unlike the four major dispensations of which  
Augustine and Milton speak, Hegel's four  
stages of the world are epochs in the development  
of Spirit as manifested in the State. They  
are secularly defined as the Oriental, the Greek,  
the Roman, and the German world and are seen as a  
process of the consciousness of Free-  
dom. The various grades in the coarse outlines  
of Freedom, Hegel writes, supply us with  
the central division of universal History.  
The Orientals have not attained the knowledge  
that *Spirit-Man as such* is free and because  
they do not know this, they are not free. They  
only know that *one is free*—that one is there-  
fore only a Despot, not a free man. The con-  
sciousness of Freedom first arose among the  
Greeks, and therefore they were free but they  
and the Romans likewise knew only that some  
are free—not man as such. The Greeks,  
therefore, had slaves and their whole life and  
the maintenance of their splendid liberty was  
impeded with the institution of slavery.  
The German nations, under the influence of

Christianity, were the first to attain the con-  
sciousness that man as man is free."

With the complete emancipation of man in  
the German-Christian world history is con-  
summated for Hegel. "The grand principle of  
being is realized, he declares, consequently  
the end of days is fully come." Another sign  
of the finality of the German-Christian world  
seems to be its reconciliation of Church and  
State. European history is the exhibition of  
the growth of each of these principles severally

in a of an antithesis on the part of both  
lastly of the harmonizing of the antithesis.  
In the German-Christian world the secular  
and the religious modes of life are ultimately  
harmonized fused in a single order of rational  
Freedom.

Apart from the opposition between the philo-  
osophical and theological approaches, here rep-  
resented by Hegel and Augustine there seem  
to be two main issues in the general theory of  
human history. The first concerns the pattern  
of change, the second, the character of the  
causes at work.

The pattern most familiar because of its  
prevalence in modern speculations is that of  
progress or evolution. The progress may be  
conceived as a dialectical motion in the realm  
of Spirit contrasted by Hegel with the realm  
of Matter or Nature according as the essence  
of Matter is Gravity and the essence of  
Spirit is Freedom." But it may also be thought  
to occur as in the dialectical materialism of  
Marx and Engels, through the resolution of  
conflicting material or economic forces.

"The whole history of mankind," Engels  
writes in his preface to the *Communist Ma-  
nifesto*, since the dissolution of primitive tribal  
societies holding land in common ownership  
has been a history of class struggles, contests  
between exploiting and exploited, ruling and  
oppressed classes. The history of these class  
struggles forms a series of evolutions in which  
now and then, a stage has been reached where the  
exploited and oppressed class, the proletariat  
cannot attain its emancipation from the sway  
of the exploiting and ruling class, the hour  
grasps without at the same time and once for  
all, emancipating society at large from all  
exploitation, oppression, class-distinction and

class struggle. The four great economic systems—the systems of slave labor, feudal serfdom, industrial capitalism and the communistic or classless society—are thus seen as the stages of progress toward an ultimate perfection in which history comes to rest because it has at last fully realized its controlling tendency.

The pattern of progress may be conceived not as a dialectical motion involving conflict and synthesis but rather as by Kant in terms of an increasing actualization of the potentialities for good in human life. Giving the name of *culture* to the production in a rational being of an aptitude for any ends whatever of his own choosing, Kant declares, "it is only culture that can be the ultimate end which we have cause to attribute to nature in respect of the human race." The progressive realization of culture consists in the liberation of the will from the despotism of desires whereby in our attachment to certain natural things we are rendered incapable of exercising a choice of our own. In these terms history moves toward a perfection which can never be fully achieved on earth for man's own nature is not so constituted as to rest or be satisfied in any possession or enjoyment whatever.

As conceived by the evolutionist, progress may or may not attain its limit but in either case its manifestation in human history appears to be analogous to as well as an extension of the line of development along which the world or all of living nature has gradually advanced.

THESE VIEWS ARE given further discussion in the chapters on EVOLUTION, PROGRESS and WORLD. Whether or not the same pattern of change obtains in the historical order of nature as in the history of man and society is a question to be answered by those who deny as well as by those who affirm progress. There is cyclical change in nature, the same pattern of birth, growth, decay and death repeating itself generation after generation. That history too repeats itself with the rise and decline of cities and civilizations seems to be the ancient view. It reappears in our day with Spengler and somewhat qualified by the possibility of progress with Toynbee.

The cities which were formerly great, Herodotus observes, have most of them be-

come insignificant and such as are at present powerful were weak in olden time. I shall therefore discourse equally of both convinced that prosperity never continues long in one stay. Lucretius finds the cyclical pattern both in the succession of worlds and in the succession of civilizations. The myth of the golden age of Kronos and the earth bound age of Zeus, which Plato tells in the *Statesman*, also applies both to nature and society.

According to the myth, there is a time when God himself guides and helps to roll the world in its course and there is a time on the completion of a certain cycle when he lets go, and the world being a living creature and having originally received intelligence from its author and creator turns about and by an inherent necessity revolves in the opposite direction. Thus the history of the world runs through infinite cycles of years and one age succeeds another in an endless round.

There is still a third view which sees history as neither cyclical nor simply progressive. Virgil reverses the order of the Platonic myth by placing the golden age in the future. It dawns with Rome where in the words of the 4th Eclogue, the majestic roll of circling centuries begins anew. Justice returns, returns old Saturn's reign with a new breed of men sent down from heaven, and the iron shall cease the golden race arise.

Rome for Virgil is not only the beginning of the golden age; it is also the consummation of history. In the *Aeneid* Jupiter himself declares that he has given the Romans dominion without end—that he has ordained for them neither period nor boundary of empire. The gowned race of Rome shall be the lords of the world, then war shall cease and the iron ages soften. Thus Jupiter says, "is it willed and so a day will come in the lapse of cycles. The perpetuity of Rome seems to leave little room for any further essential progress and no chance for another cycle of decay and regeneration."

The Christian dogma of the fall of man from grace and his return through divine mediation to grace and salvation seems to give history a pattern that is partly Platonic in the sequence which makes the loss of a golden age the occasion for striving to regain it. But it also seems

to be Virgilian in part. The epochal transitions of history happen only once. The coming of Christ is an absolutely singular event after which there is no essential progress in man's condition until the Last Judgment at the end of the world.

Common to these diverse conceptions of the pattern of history is the problem concerning the causes which are at work as history unfolds. Whatever the factors they will operate in the future as they have in past unless the millennium is already upon us or about to dawn. From the knowledge of their own past or from their dim perception of divine Providence men derive a sense of the future but they look forward to that future differently according as some part of it will stem from choices freely made or according as all of it is inexorably determined by causes beyond their control.

The basic alternatives of fate and freedom of necessity and contingency God's will and man's choice are considered in the chapters on CHANCE, FATE, and NECESSITY AND CONTINGENCY. Sometimes the issue is resolved in the same way for the course of nature and the course of history necessity reigns in both as there is contingency in the events of nature so there is freedom in the acts of history. Sometimes the processes of nature and history are distinguished the motions of matter are governed by inscrutable laws whereas the motions of men are directed by laws which leave them free to work out a destiny which is determined by rather than determines the human spirit.

Those who do not deny freedom entirely in the realm of history seldom give it unlimited scope. What men can do is conditioned from below by the operation of material forces and from above by what Hegel calls God's purpose with the world. The vast arena web of Universal History is woven by the interaction between God's will (the Absolute Idea) and human purposes or interests which Hegel calls the complex of human passions.

History for him is the union of Freedom and Necessity where the latent abstract process of Spirit is regarded as Necessity while that which exhibits itself in the conscious will of men, as the interest belongs to the domain of freedom. But this freedom which coheres

with necessity seems to belong more to the human race as a whole than to individual men. The individual man is tossed aside if he tries to obstruct the path of history. He is powerless to change its course.

Not even great men can make or determine history. They are great only because sensing the next phase of the historical process they identify themselves with the wave of the future and conform their purposes to the march of events—the dialectical development of the Absolute Idea. A few men thus become world historical individuals because their own particular aims involve those large issues which are the will of the World Spirit. They have an insight into the requirements of the time—what was ripe for development—the very Truth for their age for their world the species next in order so to speak and which was already formed in the womb of time.

Like Hegel and unlike the ancient historians Tolstoy also regards the leadership of great men as illusory. To believe in the efficacy of heroes or great men he thinks is to commit the fallacy of the man who watching the movements of a herd of cattle and paying no attention to the varying quality of the pastureage in different parts of the field or to the driving of the herdsman attributes the direction the herd takes to the animal which happens to be at its head.

Great men are only celebrated puppets, pushed ahead on the moving front of history. The motion of history derives its force and direction from the individual acts of the innumerable nameless men who comprise the human mass. The act of the individual counts little. The mass motion is a complex resultant of slight impulses tending in many directions. But however slight the impulse each man gives his contribution to history is a free act conditioned only by the circumstances under which he makes a choice and by the divine Providence which grants him the freedom to choose. Like every human action, history according to Tolstoy thus "appears to us as a certain combination of freedom and inevitability."

DIFFERENT FROM speculations on a grand scale concerning the whole historical process is that

class struggle' The four great economic systems—the systems of slave labor feudal serfdom industrial capitalism and the communistic or classless society—are thus seen as the stages of progress toward an ultimate perfection in which history comes to rest because it has at last fully realized its controlling tendency.

The pattern of progress may be conceived not as a dialectical motion involving conflict and synthesis but rather as by Kant in terms of an increasing actualization of the potentialities for good in human life. Giving the name of *culture* to the production in a rational being of an aptitude for any ends whatever of his own choosing Kant declares it is only culture that can be the ultimate end which we have cause to attribute to nature in respect of the human race. The progressive realization of culture consists in the liberation of the will from the despotism of desires whereby in our attachment to certain natural things we are rendered incapable of exercising a choice of our own. In these terms history moves toward a perfection which can never be fully achieved on earth for man's own nature is not so constituted as to rest or be satisfied in any possession or enjoyment whatever.

As conceived by the evolutionist progress may or may not attain its limit but in either case its manifestation in human history appears to be analogous to as well as an extension of the line of development along which the world or all of living nature has gradually advanced.

THESE VIEWS ARE given further discussion in the chapters on EVOLUTION PROGRESS and WORLD. Whether or not the same pattern of change obtains in the historical order of nature as in the history of man and society is a question to be answered by those who deny as well as by those who affirm progress. There is cyclical change in nature the same pattern of birth growth decay and death repeating itself generation after generation. That history too repeats itself with the rise and decline of cities and civilizations seems to be the ancient view. It reappears in our day with Spengler and somewhat qualified by the possibility of progress with Toynbee.

The cities which were formerly great Herodotus observes have most of them be-

come insignificant and such as are at present powerful were weak in olden time I shall therefore discourse equally of both convinced that prosperity never continues long in one stay. Lucretius finds the cyclical pattern both in the succession of worlds and in the succession of civilizations. The myth of the golden age of Kronos and the earth bound age of Zeus which Plato tells in the *Statesman* also applies both to nature and society.

According to the myth there is a time when God himself guides and helps to roll the world in its course and there is a time on the completion of a certain cycle when he lets go and the world being a living creature and having originally received intelligence from its author and creator turns about and by an inherent necessity revolves in the opposite direction. Thus the history of the world runs through infinite cycles of years and one age succeeds another in an endless round.

There is still a third view which sees history as neither cyclical nor simply progressive. Virgil reverses the order of the Platonic myth by placing the golden age in the future. It dawns with Rome where in the words of the 4th Eclogue the majestic roll of circling centuries begins anew Justice returns returns old Saturn's reign with a new breed of men sent down from heaven and the iron shall cease the golden race arise.

Rome for Virgil is not only the beginning of the golden age it is also the consummation of history. In the *Aeneid* Jupiter himself declares that he has given the Romans dominion without end—that he has ordained for them neither period nor boundary of empire. The gowned race of Rome shall be the lords of the world then war shall cease and the iron ages soften. Thus Jupiter says is it willed and so a day will come in the lapse of cycles. The perpetuity of Rome seems to leave little room for any further essential progress and no chance for another cycle of decay and regeneration.

The Christian dogma of the fall of man from grace and his return through divine mediation to grace and salvation seems to give history a pattern that is partly Platonic in the sequence which makes the loss of a golden age the occasion for striving to regain it. But it also seems

to be Virgilian in part. The epochal transitions of history happen only once. The coming of Christ is an absolutely singular event after which there is no essential progress in man's condition until the Last Judgment at the end of the world.

Consonant to these diverse conceptions of the pattern of history is the problem concerning the causes which are at work as history unfolds. Whatever the factors, they will operate in the future as they have in past unless the millennium is already upon us or about to dawn. From the knowledge of their own past or from their dim perception of divine providence men derive a sense of the future but they look forward to that future differently according as some part of it will stem from choices freely made or according as all of it is inexorably determined by causes beyond their control.

The basic alternatives of fate and freedom of necessity and contingency God's will and man's choice are considered in the chapters on CHANCE, FATE, and NECESSITY AND CONTINGENCY. Sometimes the issue is resolved in the same way for the course of nature and the course of history necessity reigns in both as there is contingency in the events of nature so there is freedom in the acts of history. Sometimes the processes of nature and history are distinguished the motions of matter are governed by invariable laws whereas the motions of men are directed by laws which leave them free to work out a destiny which is determined by rather than determines, the human spirit.

Those who do not deny freedom entirely in the realm of history seldom give it unlimited scope. What men can do is conditioned from below by the operation of material forces and from above by what Hegel calls God's purpose with the world. The vast arena web of Universal History is woven by the interaction between God's will (the Absolute Idea) and human purposes or interests, which Hegel calls the complex of human passions.

History for him is "the union of Freedom and Necessity where the latent abstract process of Spirit is regarded as Necessity while that which exhibits itself in the conscious will of men, as their interest belongs to the domain of freedom. But this freedom which coheres

with necessity seems to belong more to the human race as a whole than to individual men. The individual man is tossed aside if he tries to obstruct the path of history. He is powerless to change its course.

Not even great men can make or determine history. They are great only because sensing the next phase of the historical process they identify themselves with the wave of the future and conform their purposes to the march of events—the dialectical development of the Absolute Idea. A few men thus become "world historical individuals" because their own particular aims involve those large issues which are the will of the World Spirit. They have "an insight into the requirements of the time—what was ripe for development—the very Truth for their age, for their world, the species next in order so to speak, and which was already formed in the womb of time."

Like Hegel and unlike the ancient historians, Tolstoy also regards the leadership of great men as illusory. To believe in the efficacy of heroes or great men he thinks is to commit the fallacy of the man who, watching the movements of a herd of cattle and paying no attention to the varying quality of the pasturage in different parts of the field or to the driving of the herdsman attributes the direction the herd takes to the animal which happens to be at its head.

Great men are only celebrated puppets, pushed ahead on the moving front of history. The motion of history derives its force and direction from the individual acts of the innumerable nameless men who comprise the human mass. The act of the individual counts little. The mass motion is a complex resultant of slight impulses tending in many directions. But however slight the impulse each man gives his contribution to history is a free act conditioned only by the circumstances under which he makes a choice and by the divine providence which grants him the freedom to choose. Like every human action history according to Tolstoy thus "appears to us as a certain combination of freedom and inevitability."

DIFFERENT FROM speculations on a grand scale concerning the whole historical process is that

## THE GREAT IDEAS

type of philosophizing about history which considers its place in education—the light it affords to the mind and the lessons it teaches for the guidance of conduct

Montaigne for example makes the reading of history and biography the window through which a man looks out upon the world. This great world he writes is the mirror wherein we are to behold ourselves to be able to know ourselves as we ought to do in the true bias. Only against the large scene history reveals and amidst the variety of human nature it exhibits can a man truly know himself and his own time. In a similar vein Gibbon declares that the experience of history exalts and enlarges the horizon of our intellectual view. Hegel on the other hand insists that what experience and history teach us is that peoples and governments never have learned anything from history or acted on principles deduced from it.

On the practical side political writers like Machiavelli Montesquieu and the Federalists use history to exemplify or confirm their generalizations. They agree with Thucydides that an exact knowledge of the past is an aid to the interpretation of the future which in the course of human things must resemble if it does not reflect it. Most men adds Tacitus learn wisdom from the fortunes of others.

It is on these grounds that the great books of history belong with treatises on morals and politics and in the company of philosophical and theological speculations concerning the nature and destiny of man. Liberal education needs the particular as well as the universal and these are combined in the great historical narratives. Apart from their utility they have the originality of conception the poetic quality the imaginative scope which rank them with the great creations of the human mind.

## OUTLINE OF TOPICS

	PAGE
1 History as knowledge and as literature its kinds and divisions its distinction from poetry myth philosophy and science	719
2 The light and lesson of history its role in the education of the mind and in the guidance of human conduct	720
3 The writing of history research and narration	
3a The determination and choice of fact the classification of historical data	721
3b The explanation or interpretation of historic fact the historian's treatment of causes	
4 The philosophy of history	722
4a Theories of causation in the historical process	
(1) The alternatives of fate or freedom necessity or chance	
(2) Material forces in history economic physical and geographic factors	723
(3) World history as the development of Spirit the stages of the dialectic of history	
(4) The role of the individual in history the great man hero or leader	
4b The laws and patterns of historical change cycles progress evolution	
4c The spirit of the time as conditioning the politics and culture of a period	724
5 The theology of history	
5a The relation of the gods or God to human history the dispensations of providence	
5b The city of God and the city of man church and state	725

## REFERENCES

To find the passages cited, use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example in 4 HOMER *Illiad* BK II [265 283] 12d, the number 4 is the number of the column in the set, the number 12d indicates that the passage is in section d of page 12.

**P + Sections** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page; the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b-164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**Actus o + D 111015** One or more of the main divisions of a work (such as PART I BK CH 1-2 SECT) are sometimes included in the reference line numbers in brackets, as given in certain cases e.g. *Iliad* 4.1 [265 283] 12d.

**BIBLE READING** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT ACT OF A HAMMATH 7:45-(D) II Esd 6:7:45

**SYNOPSIS** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole section. Passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of References Style for general guidance in the use of The Great Ideas; consult the Preface.

## Chapter 35 HONOR

### INTRODUCTION

THE notions of honor and fame are sometimes used as if their meanings were interchangeable and sometimes as if each had a distinct connotation. In the tradition of the great books both usages will be found. It is seldom just a matter of words. The authors who see no difference between a man's honor and his fame are opposed on fundamental issues of morality to those who think the standards of honor are independent of the causes of fame. This opposition will usually extend to psychological issues concerning human motivation and to political issues concerning power and justice. It entails contrary views of the role of rewards and punishments in the life of the individual and of society.

Praise and blame seem to be common elements in the significance of fame and honor. The meaning of honor seems to involve in addition the notion of worth or dignity. But whether a man is virtuous or not, whether he deserves the good opinion of his fellow men does not seem to be the indispensable condition on which his fame or infamy rests. Nor does his good or ill repute in the community necessarily signify that he is a man of honor or an honorable man.

The connection and distinction of these terms would therefore appear to be the initial problem of this chapter. Any solution of the problem must consider the relation of the individual to the community and the standards by which the individual is appraised—by himself and his fellow men. Honor and fame both seem to imply public approval but the question is whether both presuppose the same causes or the same occasions for social esteem.

The manifestation of the value we set on one another writes Hobbes is that which is commonly called Honoring and Dishonoring. To value a man at a high rate is to honor him

at a low rate is to dishonor him. But high and low in this case is to be understood by comparison to the rate that each man setteth on himself. Does Hobbes mean that the value a man sets on himself is the true standard of his worth? Apparently not. Let men he says rate themselves at the highest value they can yet their true value is no more than it is esteemed by others. What then is the measure of such esteem? The value or worth of a man answers Hobbes is as of all other things his price that is to say so much as would be given for the use of his power and therefore is not absolute but a thing dependent on the need and judgment of another.

Here then honor is not what a man has in himself but what he receives from others. Honor is paid him. He may think himself dishonored if others do not pay him the respect which accords with his self respect but their evaluation of him is somehow independent of the standard by which he measures himself. It depends on the relation in which he stands to them in terms of his power and their need. Virtue and duty—considerations of good and evil right and wrong—do not enter into this conception of honor. The distinction between honor and fame tends to disappear when honor reflects the opinion of the community based on the political utility rather than the moral worth of a man.

THERE IS ANOTHER conception of honor which not only separates it from fame but also makes it independent of public approbation. This is not an unfamiliar meaning of the term. The man who says on my honor or my word of honor may not be an honest man but if he is he pledges himself by these expressions to fulfill a promise or to live up to certain expectations. He is saying that he needs no ex-

ternal check or sanction. A man who had to be compelled by threat or force to honor his obligations would not be acting from a sense of honor.

It is not for outward show that the soul is to play its part. Montaigne writes, but for ourselves within where no eyes can pierce but our own, there she defends us from the fear of death of pain, of shame itself; there she arms us against the loss of our children, friends and fortunes and when opportunity presents itself she leads us on to the hazards of war. Not for any profit but for the honor of honesty it self.

A sense of honor thus seems to function like a sense of duty. Both reflect the light of conscience. Both operate through an inner determination of the will to do what reason judges to be right in the particular case. If there is a difference between them it is not so much in their effects as in their causes.

Duty usually involves obligations to others but a man's sense of honor may lead him to act in a certain way though the good of no other is involved. To maintain his self respect he must respect a standard of conduct which he has set for himself. Accordingly a man can be ashamed of himself for doing or thinking what neither injures any one else nor ever comes to the notice of others. A sense of shame—the reflex of his sense of honor—torments him for having fallen short of his own ideal for being loyal to his own concepts of what is good or right and his shame may be even more intense in proportion as the standard he has isolated is not one shared by others, but is his own measure of what a man should be or do.

Dmitri Karamazov exhibits these mixed feelings of honor and shame when he declares at the preliminary, legal investigation: You have to deal with a man of honor, a man of the highest honor, above all—don't lose sight of it—a man who's done a lot of nasty things but has always been and still is, honorable at bottom in his inner being. That's just what's made me wretched all my life that I yearned to be honorable that I was so to say a martyr to a sense of honor seeking for it with a lantern with the lantern of Diogenes, and yet all my life I've been doing filthy things."

The sense of honor and the sense of duty differ in still another respect. Duty presupposes law. The essence of law is its universality. A sense of duty therefore leads a man to do what is expected of him but not of him alone for he is no different from others in relation to what the law commands. In contrast a sense of honor presupposes self consciousness of virtue in the individual. It binds him in conscience to live up to the image of his own character insomuch as it has lineaments which seem admirable to him.

Without some self respect a man can have no sense of honor. In the great tragic poems the hero who dishonors himself in his own eyes dies spiritually with the loss of his self respect. To live on in the flesh thereafter would be almost a worse fate than the physical demise which usually symbolizes the tragic ending.

THE SENSE IN WHICH A MAN CAN HONOR OR DISHONOR HIMSELF IS CLOSELY AKIN TO THE SENSE IN WHICH HE CAN BE HONORED OR DISHONORED BY OTHERS. BOTH INVOLVE A RECOGNITION OF VIRTUE OR ITS VIOLATION. BUT THEY DIFFER IN THIS THAT A MAN'S PERSONAL HONOR IS AN INTERNAL CONSEQUENCE OF VIRTUE AND INSEPARABLE FROM IT, WHEREAS PUBLIC HONOR BESTOWED UPON A MAN IS AN EXTERNAL REWARD OF VIRTUE. IT IS NOT ALWAYS WON BY THOSE WHO DESERVE IT. WHEN IT IS, IT IS GIVEN TO A MAN AS AQUINAS POINTS OUT ON ACCOUNT OF SOME EXCELLENCE IN HIM AND IS A SIGN AND TESTIMONY OF THE EXCELLENCE THAT IS IN THE PERSON HONORED.

THERE CAN BE NO SEPARATION BETWEEN WHAT A COMMUNITY CONSIDERS HONORABLE AND WHAT IT CONSIDERS VIRTUOUS OR EXCELLENT IN MIND OR CHARACTER. BUT IT DOES NOT NECESSARILY FOLLOW THAT THE MAN WHO IS ACTUALLY VIRTUOUS WILL ALWAYS RECEIVE THE HONOR WHICH IS DUE HIM. PUBLIC HONOR CAN BE MISPLACED—EITHER UNDESERVINGLY GIVEN OR UNJUSTLY withheld. THE VIRTUOUS SHOULD BE PREPARED FOR THIS IN THE JUDGMENT OF AQUINAS SINCE HONOR IS NOT THE REWARD FOR WHICH THE VIRTUOUS WORK, BUT THEY RECEIVE HONOR FROM MEN BY WAY OF REWARD AS FROM THOSE WHO HAVE NOTHING GREATER TO OFFER. HAPPINESS HE GOES ON TO SAY IS THE TRUE REWARD FOR WHICH THE VIRTUOUS WORK FOR IF THEY WORKED FOR HONOR IT WOULD NO LONGER BE VIRTUE BUT AMBITION.

Tolstoy however deplores the injustice of the honor given Napoleon and the dishonor in which Kutuzov was held. Napoleon he writes that most insignificant tool of history who never anywhere even in exile showed human dignity—Napoleon is the object of adulation and enthusiasm he is grand. But Kutuzov—the man who from the beginning to the end of his activity in 1812 never once swerving by word or deed from Borodino to Vilna presented an example exceptional in history of self sacrifice and a present consciousness of the future importance of what was happening—Kutuzov seems to them something indefinite and pitiful and when speaking of him and of the year 1812 they always seem a little ashamed.

Kutuzov later received some measure of honor when he was presented with the rarely awarded Order of St George. But what is perhaps a much higher honor came to him after his death when Tolstoy enthroned him as one of the heroes of *War and Peace*. Sometimes the virtuous or truly honorable man living in a bad society goes without honor in his own time to be honored only by posterity. He may even be dishonored by a society which has contempt for virtue. Sometimes a man of indifferent character and achievement or even one who is actually base and ignoble wins honor through cleverly simulating the possession of admirable traits.

It seems appropriate to consider the proportion between a man's intrinsic worth and the honor he receives. The distribution of honors raises questions of justice—in fact it is thought to be one of the chief problems of distributive justice. For those who hold that honor and fame are utterly distinct in principle this is the clear mark of their difference. Justice does not require that fame be proportionate to virtue. Though there is a sense in which fame may not be deserved the qualities in a person which justify fame are of a different order from those which honor should reward. Fame belongs to the great the outstanding the exceptional without regard to virtue or vice. Infamy is fame no less than good repute. The great scoundrel can be as famous as the great hero. Existing in the reputation a man has regardless of his character or accomplishments fame does not

tarnish as honor does when it is unmerited. But for the same reason fame is often lost as fortuitously as it is acquired. Fame has no stability. Aquinas observes it is easily ruined by false report. And if it sometimes endures this is by accident.

The distinction between honor and fame is not acknowledged by those who ignore merit as a condition of praise. Machiavelli for example places fame—or as he sometimes calls it glory—in that triad of worldly goods which men want without limit and without relation to justice. If the aim of life is to get ahead in the world money fame and power are the chief marks of success. A man is deemed no less successful if he acquires power by usurping it or gains it by foul means rather than fair so too if he becomes famous through chicanery or deception and counterfeits whatever form of greatness men are prone to praise.

Along with riches fame says Machiavelli is the end which every man has before him. This men seek to obtain by various methods—one with caution another with haste one by force another by skill one by patience another by its opposite and each one succeeds in reaching the goal by a different method. Some methods he admits in another place may gain empire but not glory such as to slay fellow citizens to deceive friends to be without faith without mercy without religion. Nevertheless he declares Let a prince have the credit of conquering and holding a state the means will always be considered honest and he will be praised by everybody.

Because fame seems to be morally neutral it replaces honor in the discussions of those who measure men in terms of success instead of virtue duty or happiness. Because it is morally neutral it is the term used by those who wish to judge not men but the impression they make. What counts is the magnitude of that impression not its correspondence with reality.

To be famous is to be widely not necessarily well spoken of by one's fellow men now or hereafter. The man who stands above the herd whose outlines are clear and whose deeds are memorable takes his place among the famous of his time or of all times. Plutarch the moralist certainly does not regard the men whose lives

he writes as paragons of virtue. On the contrary he plainly indicates that many of them are examples of extraordinary depravity. But Plutarch the biographer treats them all as famous. He takes that as a matter of historic fact not of moral judgment. Good or bad they were acknowledged to be great men leaders, figures of eminent proportions, engaged in momentous exploits. They were not all vicious. Few if any were successful in all that they attempted or were able to preserve what successes they achieved. But each ventured beyond the pale of ordinary men and each succeeded at least in becoming a symbol of great deeds, a monument in human memory.

The opposite of fame is anonymity. In Dante's moral universe, only the Trimmers on the rim of Hell are totally anonymous neither good nor bad they lack name and fame. Because they lived without infamy and without praise Hell will not receive them for the damned would be some boast of them. To them alone no fame can be allowed. Honor and glory belong only to the blessed but the damned in the pits of Hell by the record that is left for men to revile are as well remembered, and hence as famous, as the saints in Heaven.

THAT MEN NORMALLY desire the esteem of their fellow men seems to be undisputed. He must be of a strange and unusual constitution Locke writes, who can content himself to live in constant disgrace and disrepute with his own particular society. Solitude many men have sought and been reconciled to but nobody that has the least thought or sense of a man about him, can live in society under the constant dislike and ill opinion of his familiar, and there he continues with This is a burden too heavy for human suffering.

A society of misanthropes, despising each other is as unthinkable as an economy of misery. The social nature of man requires sympathy and fellow feeling love and friendship and all of these involve some measure of approval based on knowledge or understanding. According to one theory the highest type of individual pratings from mutual admiration, the respect which men have for one another. The old saying that "there is honor among thieves" suggests that even among bad men there is a

desire to hold the approbation of those who share a common life. With this in mind apparently William James describes fame and honor as a man's image in the eyes of his own set which exists or condemns him as he conforms or not to certain requirements that may not be made of one in another walk of life.

Though Pascal regards the pursuit of glory as the greatest baseness of man he must admit that it is also the greatest mark of his excellence for whatever possessions he may have on earth whatever health and essential comfort he is not satisfied if he has not the esteem of men. He values human reason so highly that whatever advantages he may have on earth he is not content if he is not also ranked highly in the judgment of man. Those who most despise men and put them on a level with brutes, yet wish to be admired and beloved by men and contradict themselves by their own feelings.

BUT IS THIS UNIVERSAL DESIRE FOR THE ESTEEM OF OTHERS A DESIRE FOR HONOR OR A DESIRE FOR FAME? Does it make any difference to our conception of happiness whether we say that men cannot be happy without honor or that they cannot be happy unless they are famous?

Even those who do not distinguish between honor and fame are led by these questions to discriminate between fame and infamy. As we have already noted fame and infamy are alike since both involve the notoriety enjoyed by the outstanding, the exceptional, the great whether good or bad. If that men desire is simply to be known by others and to have a kind of immortality through living or in the memory of later generations then it will serve as well as good repute. All that matters is the size of the reputation and its value. But if the desire is for approbation or praise, good opinion alone will suffice and then the question becomes whether the object is fame or honor. Which does Iago have in mind when he says, Good name in man and woman that my Lord is the immediate jewel of their souls?"

Opposite answers seem to be determined by opposite views of human nature and human happiness. Those who, like Plato, think that virtue is an indispensable ingredient of happiness, include honor among the good things

which the virtuous man will seek in the right way. Possession of good things by itself is not sufficient. Socrates says in the *Euthydemus*: A man must also use them and use them well for the wrong use of a thing is far worse than the non use. Applied to honor this would seem to mean that the virtuous man will not seek praise for the wrong reasons—either for that which is not praiseworthy in himself or from others whose lack of virtue disqualifies them from giving praise with honesty. The virtuous man will not seek fame or be unhappy lacking it for fame like pleasure or wealth can be enjoyed by bad men as well as good and be sought for wrong as well as right reasons or in the wrong as well as the right way. Virtue according to the moralists protects a man from the seductions of money, fame and power—the things for which men undisciplined by virtue seem to have an inordinate desire.

In the theory of virtue honor unlike fame belongs only to the good and is always a good object worthy of pursuit. Honor is in fact the object of two virtues which Aristotle defines in the *Ethics*. One of these virtues he calls ambition and the Greek name for the other which is literally rendered by high mindedness is sometimes translated by the English word magnanimity and sometimes by pride. The Christian connotation of pride makes it a difficult word to use as the name for a virtue but it can nevertheless be so used when it is understood to mean a justifiable degree of self respect—not conceit but a middle ground between undue self esteem and inordinate self depreciation. When the Aristotelian names for these two vices are translated in English by vanity and humility it is again necessary to point out that humility must be understood not in its Christian significance as meaning the virtue of the truly religious man but rather as signifying an exaggerated meekness or pusillanimity.

The difference between pride and ambition lies in the magnitude of the other virtues they accompany and the scale of honor with which they are concerned. Both are concerned with honor which Aristotle calls the greatest of external goods. In both cases honor is the prize of virtue and it is to the good that it is rendered. The proud man is one who being

truly worthy of great things also thinks himself worthy of them for he who does so beyond his deserts is a fool but no virtuous man is foolish or silly. The proud man will be pleased only by honors that are great and that are conferred by good men. Honor from casual people and on trifling grounds he will utterly despise since it is not this that he deserves.

Humility and vanity are according to Aristotle the vices of defect and excess which occur when a man fails to be proud. The unduly humble man underestimating his worth does not seek the honor he deserves. The vain man at the other extreme overestimates himself and wants honor out of proportion to his qualities. Honor like any other external good may be desired more than is right or less or from the right sources and in the right way. We blame both the over ambitious man as aiming at honor more than is right and from the wrong sources and the unambitious man as not willing to be honored even for noble reasons.

However words are used the point seems to be clear. It is possible for men to desire honor more than they should and less. It is also possible for honor to be rightly desired. Honor desired to excess or in the wrong way may be called fame even as the excessive desire for honor is sometimes regarded as the vice of ambition or an aspect of the sin of pride. The word pride seems to have both a good and a bad connotation. But the point remains that the difference between these two meanings of pride like the difference between honor and fame is understood by moralists in terms of virtue and it is discounted by those who reject the relevance of virtue.

THOUGH HONOR MAY be regarded as inseparable from virtue in moral theory certain political philosophers make its separation from virtue the principle of a type of government.

In Plato's *Republic* monarchy and aristocracy are defined in terms of the virtue of the rulers—either of the one wise man or of the excellent few. Government by the few is oligarchy rather than aristocracy when wealth rather than virtue is the principle of their selection. Plato sees the possibility of an intermediate between these two which occurs as a kind of transitional form when aristocracy

tends to degenerate into oligarchy. He calls that intermediate "timocracy" and describes it as a mixture of good and evil" in which the ruler is a lover of power and a lover of honor claims to be a ruler not because he is eloquent, or on any ground of that sort, but because he is a soldier and has performed feats of arms." In such a state he claims, "one thing and one thing only is predominantly seen—the spirit of contention and ambition and these are due to the prevalence of the passionate or spirited element." In a timocracy in other words, honor is divorced from virtue and wisdom and becomes the only qualification for public office.

With Montesquieu, the situation is quite reversed. For him, virtue is absolutely requisite in popular government or democracy and to a less extent in that other form of republic which he calls "aristocracy." As virtue is necessary in a republic, so is honor in a monarchy. Honor—that is, the prejudice of every person and rank—supplies the place of political virtue. A monarchical government supposes pre-eminences and ranks, as likewise a noble descent. Since it is the nature of honor to aspire to preferments and titles, it properly placed in this government."

Though Montesquieu and Plato differ in their classification of the forms of government they seem to agree that honor divorced from virtue is a counterfeit. Honor identified with ranks and titles, honor which moves individuals to serve the public good in order to promote their own interests. Montesquieu admits as a false honor "but even this false honor is as useful to the public as true honor could possibly be to private persons." Considered, the laws of education characteristic of monarchical governments, Montesquieu points out that it is not in colleges or academies, but in the world itself which is the school of honor that the subjects of monarchy are chiefly trained. "Here the actions of men are judged, not as virtuous, but as human—not as just but as great, not as reasonable but extraordinary."

Honor is discussed in the chapter on COUNTRY, and the role of the hero—the leader or great man—in the chapter on HISTORY. Here we are concerned with the hero in the extreme of

his fellow men, the symbol of human greatness and the object of human admiration.

Honor fame and glory combine in various proportions to constitute the heroic figures of classical antiquity. Honor to the extent that none is without some virtue and each possesses certain virtues at least to a remarkable degree. Fame, because they are the great among men outstanding and well known godlike in their pre-eminence and glory almost in the theological sense inasmuch as the heroes celebrated by Homer and Virgil are beloved by the gods.

It is not accidental that the central figure in the Greek tragedies is called a "hero," since in the ancient view the tragic character must necessarily belong to a great man—a man of noble proportions, one who is "better than the ordinary man," says Aristotle. If he also has some fault or flaw it is a consequence of strength misused not a mark of individual weakness. Such weakness as he has is the common frailty of man.

In the modern world heroism and the heroic are more difficult to identify or define. We tend to substitute the notion of genius in considering the exceptionally gifted among men. Glory is dimly recognized and honor takes second place to fame. That portion of modern poetry which deals in heroes—as, for example, the tragedies and historical plays of Shakespeare—borrows them from, or models them on, legendary figures. The great modern novels, counterparts of the epic poems of antiquity, portray exceptional men and women without idealizing them to heroic stature. One of these novels, Tolstoy's *War and Peace* seeks to deflate the fame of great men. They do not deserve even their reputation for great deeds, much less the honor owed the truly great.

"If we assume as historians do that great men lead humanity to the attainment of certain ends . . . then it is impossible," Tolstoy declares, "to explain the series of history without introducing the conceptions of chance and genius." But in Tolstoy's opinion "the words chance and genius do not denote any really existing thing and therefore cannot be defined." We can dispense with these meaningless words, he thinks, if we are willing to renounce our claim to discern a purpose immediately intelligible to us and admit "the ultimate purpose to be beyond

our ken. Then not only shall we have no need to see exceptional ability in Napoleon and Alexander but we shall be unable to consider them to be anything but like ordinary men and we shall not be obliged to have recourse to chance for an explanation of those small events which made these people what they were but it will be clear that all those small events were inevitable.

This view of history with its emphasis on impersonal forces finds another expression in Marxist theory. The machine and the proletariat at mass are the heroes of history or of the revolution. Yet the modern period is not without an opposite strain of thought. Machiavelli calls for a great man a hero to become the liberator of Italy who shall yet heal her wounds and put an end to the ravaging and plundering of Lombardy to the swindling and taxing of the kingdom and of Tuscany and cleanse those sores that for long have festered. His maxims for the prince may be read not merely as advice for getting and holding power but as preparing for an heroic effort in which the prince's power and fame will be used for liberty. The great man has the historic mission of a pioneer not the role of a puppet.

Even in the Renaissance however Machiavelli is answered by Montaigne who prizes moderation too much to praise heroism more than a little. Comparing Socrates and Alexander Montaigne places all of the latter's actions under the maxim Subdue the world whereas Socrates he says acts on the principle that it is wise to carry on human life conformably with its natural condition. To Montaigne the virtue of the soul does not consist in flying high but in walking orderly its grandeur does not exercise itself in grandeur but in mediocrity.

The mediaeval Christian conception of heroism centers on the practice of heroic virtue by which the theologian defines sanctity. In the calendar of saints there is every type of spiritual excellence but all alike—martyrs, virgins, confessors, doctors—are regarded as having with God's grace superhuman strength. The saints not only perform acts of exemplary perfection they are godlike men in their exemption from the frailties of human flesh.

The heroes of antiquity also wear an aspect

of divinity but like Achilles each has a weakness in his armor. Moreover the heroes of the *Iliad*, the *Odyssey*, and the *Aeneid* are men of overweening pride. They are relentlessly jealous of their honor. They strive not so much for victory as for the due meed of honor which is its fruit. Nothing grieves them so much as to have their deeds go unrequited by abundant praise. In the contribution made by this love of praise to the growth of the Roman empire Augustine sees the providential working of God. In order that that empire might overcome the grievous evils which existed among other nations he writes God purposely granted it to such men as for the sake of honor and praise and glory consulted well for their country in whose glory they sought their own and whose safety they did not hesitate to prefer to their own suppressing the desire of wealth and many other vices for this one vice namely the love of praise.

To Augustine however this glory found in human praise is far removed from the true glory. It is in fact a sin. So hostile is this vice to pious faith he writes if the love of glory be greater in the heart than the fear or love of God that the Lord said How can ye believe who look for glory from one another and do not seek the glory which is from God alone?

The Christian hero consequently seeks not his own glory but the glory of God and in contrast to the pagan hero he is great not in pride but in humility. His model is seen in the Apostles who according to Augustine amidst maledictions and reproaches and most grievous persecutions and cruel punishments were not deterred from the preaching of human salvation. And when great glory followed them in the church of Christ they did not rest in that as in the end of their virtue but referred that glory itself to the glory of God. For their Master had taught them not to seek to be good for the sake of human glory saying Take heed that ye do not your righteousness before men to be seen of them but Let your works shine before men that they may see your good deeds, and glorify your Father who is in heaven.

The word glory in its theological connotation thus has a meaning distinct from and even opposed to the sense in which it is sometimes

used as a synonym for "fame." In the liturgy of the church, the psalms and hymns (especially those of the doxology which sing the glories Patri and the glories *in excelsis Deo*) render unto God the homage which is due His infinite goodness, the radiative splendor of which is the divine glory. As in the strict moral sense honor on the human plane is due to virtue alone so in a strict theological sense glory belongs only to God.

Strictly God's glory cannot be increased by human merit or action. Yet even a t of religious devotion is said to redound to the greater glory of God and to diffuse His glory among creatures through the divinity they acquire when they love God and are beloved by Him. God is all

fullness in Himself and the height of all perfection" nevertheless, Montaigne writes, His praise may be augmented and increased by the blessing and praise we attribute to His exterior works."

According to Dante "the glory of Him who moves everything, penetrates through the universe and is resplendent in one part more and in another less. In his journey through Paradise he beholds the saints whom God loves especially each with a distinct degree of glory according to the proximity with which he approaches the presence of God. Their halos and aureoles, in the imagery of Christian art, are the symbols of the glory in which they are bathed as in reflected light.

## OUTLINE OF TOPICS

1. The relation of honor and fame: praise and reputation	732
- Honor and fame in the life of the individual	736
- 1. The sense of honor and of shame: loyalty to the good 2. Honor as an object of desire and as a factor in virtue and happiness 3. Honor as our self-respect: magnanimity or proper pride 4. Honor or fame as a mark of immortality 5. Honor as the pledge of friendship: the codes of honor among social equals	737
3. The social realization of honor and fame	740
3 <sup>a</sup> The reaction of the community to its good or great men 3 <sup>b</sup> The conditions of honor or fame and the causes of dishonor or infamy	741
4. Honor in the political community and in government	742
4 <sup>a</sup> Honor as a principle in the organization of the state: timocracy and monarchy 4 <sup>b</sup> The seal of honor in the organization of the state: the just distribution of honors 4 <sup>c</sup> Honor as a political technique: the uses of praise, prestige, public opinion	743
5. Hero, fame, and the heroic	744
5 <sup>a</sup> Honor as a motivation of heroism 5 <sup>b</sup> Hero-worship: the exaltation of heroism 5 <sup>c</sup> The occasions of heroism in war and peace 5 <sup>d</sup> The estimation of the role of the hero in his age	745
6. The idea of glory: its distinction from honor and fame	746
6 <sup>a</sup> The glory of God: the signs and the praise of the divine glory 6 <sup>b</sup> The reflected glory of the angels and saints	746

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad* BK II [265-283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS.** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters a and b refer to the upper and lower halves of the left hand side of the page; the letters c and d to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR & DIVISIONS.** One or more of the main divisions of a work (such as PART, BK, CH, SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e.g. *Iliad* BK II [265-283] 12d.

**BIBLE REFERENCES.** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. *Old Testament Nehemiah* 7:45-(D) *II Esdras* 7:46.

**SYMBOLS.** The abbreviation esp. calls the reader's attention to one or more especially relevant parts of a whole reference. Passim signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

## REFERENCES

To find the passages cited use the numbers in heavy type which are the volume and page numbers of the passages referred to. For example, in 4 HOMER *Iliad* BK II [265-283] 12d the number 4 is the number of the volume in the set the number 12d indicates that the passage is in section d of page 12.

**PAGE SECTIONS** When the text is printed in one column the letters a and b refer to the upper and lower halves of the page. For example in 53 JAMES *Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns the letters c and d refer to the upper and lower halves of the left hand side of the page the letters e and f to the upper and lower halves of the right hand side of the page. For example in 7 PLATO *Symposium* 163b 164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**AUTHOR'S DIVISIONS** One or more of the main divisions of a work (such as PART BK CH SECT) are sometimes included in the reference line numbers in brackets are given in certain cases e.g. *Iliad* BK II [265-283] 12d

**BIBLICAL REFERENCES** The references are to book chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses the King James version is cited first and the Douay indicated by a (D) follows e.g. OLD TESTAMENT *Nehemiah* 7:45-(D) *II Esdras* 7:46

**SYMBOLS** The abbreviation esp calls the reader's attention to one or more especially relevant parts of a whole reference *passim* signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references see the Explanation of Reference Style for general guidance in the use of *The Great Ideas* consult the Preface.

# Chapter 36 HYPOTHESIS

## INTRODUCTION

A COMPARISON of their Greek and Latin roots shows that the English words hypothesis and supposition are synonymous. To hypothesize or to suppose is to place under— to make one thing the basis of another in the process of thought.

The word hypothesis is today often popularly misapplied to mean a guess or hunch. The sleuth in a detective story speaks of having an hypothesis about who committed the crime. The popular notion of what it means to suppose something or to entertain a supposition more accurately reflects the meaning of hypothesis in logic, mathematics, and scientific or philosophical method.

A supposition is generally understood to be something taken for granted—something assumed for the purpose of drawing implications or making inferences. What is supposed is not known to be true; it may be true or false. When we make a supposition our first concern is to see what follows from it and only then to consider its truth in the light of its consequences. We cannot reverse this order when we employ suppositions and ask first about their truth.

The word if expresses the essence of supposing. The word then or the phrase it follows that introduces the consequences for the consideration of which we make the supposition. We are not interested in the if for its own sake but for the sake of what it may lead to. In any statement of the "if—then" sort it is the if-clause which formulates the supposition or the hypothesis, the other part of the statement, the then-clause, formulates the consequences or implications. The whole complex statement which makes an if the logical basis for a then is not an hypothesis. Rather it is what is traditionally called in logic a hypothetical proposition.

THERE IS ONE USE of the word hypothesis in mathematics which seems at odds with the foregoing summary. In Euclid's *Elements* for example an hypothesis is that which is given not as the basis from which the conclusion is drawn or proved but as a condition of solving the geometric problem under consideration. Let us take Proposition 6 of Book I. It reads: If in a triangle two angles be equal to one another then the sides which subtend the equal angles will also be equal to one another. In the demonstration of this theorem a triangle having two equal angles is regarded as given or granted. That figure or geometrical condition is a fact obtained by hypothesis. It is the fact stated in the hypothesis or the if clause of the theorem.

If the geometrical reality of that fact itself is questioned the answer would have to be obtained by a prior proof that such a figure conforming to the definition of an isosceles triangle can be constructed by the use of no other instruments than a straight edge and a compass. The construction is not made however as part of the proof of Theorem 6 any more than is the demonstration of an antecedent theorem, which may have to be used in the proof of Theorem 6. In the proof of Theorem 6 the first line beginning with the word let declares that the constructibility of the figure is to be taken for granted as a matter of hypothesis.

The whole problem of Theorem 6 is to prove that the then-clause follows from the if-clause. Euclid appears to accomplish this by introducing other propositions—drawn from his axioms, definitions, postulates, or theorems previously demonstrated—which establish this connection and so certify the conclusion as following from the hypothesis. Two points about this procedure should be noted.

First the conclusion does not follow from

the hypothesis directly for if that were so the if then proposition would be self evident and would need no proof The mind which sees immediately that the sides opposite to the equal angles in an isosceles triangle are necessarily equal does not need any demonstration of the connection between equal angles and equal sides The Euclidean demonstration consists in making this connection which is not immediately evident meditatively evident that is evident through the mediation of other propositions It is not the hypothesis alone which proves the conclusion but the hypothesis in the company of other propositions which serve to take the mind step by step from the hypothesis granted to the conclusion implied

Second the proposition with the truth of which the reasoning seems to end is not the proposition to be proved The Q E D at the end of a Euclidean demonstration does not apply to the last proposition in the line of proof but to the theorem itself for that is the proposition to be proved The last proposition in the reasoning is merely the consequent which according to the theorem is proposed as following from the hypothesis When he is able to verify the proposed connection between the hypothesis and its conclusion or consequent Euclid says Q E D to the theorem as a whole—the whole if then statement

The process of proof seems to be the same when the theorem is stated categorically rather than hypothetically For example Theorem 6 might have been stated as other Euclidean theorems are in the following manner The sides subtended by equal angles in a triangle are also equal to one another This variation in mode of statement raises a question not about the meaning of by hypothesis in Euclidean proof but about the difference between hypothetical and categorical propositions which we will consider later

THE EUCLIDEAN USE of a given (that is a constructible) figure as an hypothesis does not seem to be a method of making a supposition in order to discover its implications Nor does it seem to be a way of testing the truth of an hypothesis by reference to its consequences Both of these aspects of hypothetical reasoning do appear however in Plato's dialogues

In the *Meno* for example Socrates proposes at a certain turn in the conversation about virtue and knowledge that he and Meno entertain the hypothesis that virtue is knowledge Socrates immediately inquires about the consequences If virtue is knowledge he asks, will it be taught? Since Meno already understands that knowledge is teachable he answers the question affirmatively The utility of advancing the hypothesis that virtue is knowledge gradually appears in the next phase of the dialogue wherein it is discovered that virtue is not teachable at all or at least not in the way in which the arts and sciences are teachable The discovery throws some doubt on the truth of the hypothesis that virtue is knowledge at least it does not seem to be knowledge in the same sense as science or art

This mode of reasoning exemplifies the use of an hypothesis to test its truth in terms of its consequences The underlying logical principle is that the denial of the consequences requires a denial of the antecedent hypothesis just as an affirmation of the antecedent would require an affirmation of the consequent Nothing follows logically from a denial of the hypothesis, or from an affirmation of its consequences

This example from the *Meno* also illustrates the difference between Euclid's and Plato's use of hypotheses Socrates is not here trying to prove that if virtue is knowledge then virtue is teachable The validity of the foregoing if then statement is already understood in terms of the fact that knowledge is teachable With the if-then statement accepted as valid Socrates uses it for the purpose of ascertaining whether or in what sense virtue is knowledge It is not the hypothetical or if then statement which is proved but the hypothesis—the antecedent in that statement—which is tested

The same general method of employing hypotheses and testing them is found in the empirical sciences In medical practice the physician according to Hippocrates must be able to form a judgment from having made himself acquainted with all the symptoms and estimating their powers in comparison with one another he should then cultivate prognosis since he will manage the cure best who has foreseen what is to happen from the present state of matters

The preliminary diagnosis states an hypothesis (what the disease may be) and the prognosis foresees a set of consequences (what is likely to happen if the diagnosis is correct). Observation of the course of the symptoms and the patient's changing condition will either confirm or invalidate the prognosis. Confirmation leaves the diagnosis a lucky guess but fails to prove it. If the disease does not run the predicted course however the diagnosis on which the prognosis was based can be dismissed as a false hypothesis.

WHEN AN HYPOTHESIS takes the form of a prediction of what should happen if the hypothesis is true the failure of the consequences to occur refutes the hypothesis. Though discussions of scientific method frequently speak of prediction and verification it would seem as though prediction can only lead to the refutation of an hypothesis rather than to its verification. An hypothesis is overthrown when its prediction fails but it is not verified when its prediction comes true. To think that it can be verified in this way is to commit the logical fallacy of arguing from the truth of a conclusion to the truth of its premises. How then do empirical scientists prove an hypothesis to be true? What do they mean by prediction and verification in relation to the use of hypothesis?

There seem to be two possible ways in which an hypothesis can be proved by empirical or experimental research. One way can be used when we know that the consequences implied follow only from the truth of the hypothesis. Should the consequences implied be impossible unless the supposed condition exists, then the confirmation of the prediction verifies the hypothesis.

The other possible method of verification has come to be called the method of multiple working hypotheses. The validity of this method depends on our knowing that the several hypotheses being entertained exhaust all the relevant possibilities. Each hypothesis generates a prediction and if upon investigation the observed facts negate every prediction except one then that one remaining hypothesis is verified. If negative instances have eliminated the false hypotheses, the hypothesis remaining must be true on the condition of course that it is the only possibility which is left.

Both of these methods seem to be valid only if a prerequisite condition is fulfilled. To verify one of a series of multiple hypotheses through the elimination of the others the scientist must know that the hypotheses enumerated are truly exhaustive. In the verification of a single hypothesis by the confirmation of its prediction the scientist must know that the observed consequences can follow from no other supposition. Since such knowledge is often unavailable probability rather than complete proof results from the testing of hypotheses by observation or experiment.

In his *Treatise on the Vacuum* Pascal offers a summary of the logical situation by distinguishing the true, the false, and the doubtful or probable hypothesis. Sometimes its negation brings a conclusion of obvious absurdity and then the hypothesis is true and invincible. Or else one deduces an obvious error from its affirmation and then the hypothesis is held to be false. And when one has not been able to find any mistake either in its negation or its affirmation then the hypothesis remains doubtful so that in order that the hypothesis may be demonstrable it is not enough that all the phenomena result from it but rather it is necessary if there ensues something contrary to a single one of the expected phenomena that this suffice to establish its falsity.

BOTH THE USE OF HYPOTHESES and the method of verifying them vary from science to science according as the character of the science happens to be purely empirical (e.g. the work of Hippocrates, Darwin, Freud) or experimental (e.g. the work of Harvey and Faraday) or a combination of experimentation with mathematical reasoning (e.g. the work of Galileo, Newton, Fourier). Not all scientific work is directed or controlled by hypotheses but in the absence of well formulated hypotheses, the research can hardly be better than exploration.

A well-constructed experiment especially what Bacon calls an *experimentum crucis* derives its demonstrative character from the hypothetical reasoning which formulates the problem to be solved. The value of such a crucial experiment appears in Bacon's reasoning about the rise and fall of the tides. If it be found he writes, that during the ebb the surface of the

waters at sea is more curved and round from the waters rising in the middle and sinking at the sides or coast and if during a flood it be more even and level from the waters returning to their former position, then assuredly by this decisive instance the raising of them by a magnetic force can be admitted if otherwise it must be entirely rejected.

In the field of mathematical physics and particularly in astronomy, the meaning of hypothesis is both enlarged and altered. So far we have considered hypotheses which are single propositions implying certain consequences. But in mathematical physics a whole theory—a complex system of propositions—comes to be regarded as a single hypothesis.

In his preface to the work of Copernicus Osiander says that the task of the astronomer is to use painstaking and skilled observation in gathering together the history of the celestial movements and then—since he cannot by any line of reasoning reach the true causes of these movements—to think up or construct whatever causes or hypotheses he pleases such that by the assumption of these causes those same movements can be calculated from the principles of geometry for the past and for the future too. The elaborate system constructed by Copernicus and the system constructed by Ptolemy which Copernicus hopes to replace are sometimes called the Copernican hypothesis and the Ptolemaic hypothesis and sometimes these two theories are referred to as the heliocentric hypothesis and the geocentric hypothesis.

A whole theory regarded as an hypothesis must be tested in a different way from a single proposition whose implication generates a prediction. As rival hypotheses one theory may be superior to another in internal consistency or in mathematical simplicity and elegance. Kepler is thus able to argue against Ptolemy by appealing to criteria which Ptolemy accepts pointing out that Ptolemy himself wishes to construct hypotheses which are as simple as possible if that can be done. And so if anyone constructs simpler hypotheses than he—understanding simplicity geometrically—he on the contrary will not defend his composite hypotheses.

But even if the Copernican hypothesis is superior on the grounds of being geometrically

simpler it must meet another test. As indicated in the chapter on ASTRONOMY mathematical theories about physical phenomena must be more than ideal constructions of possible universes. They must try to account for this on real world and are therefore subject to the test of their applicability to reality. However elegant it may be mathematically an hypothesis—when considered from the point of view of physics—is satisfactory only if it accounts for the phenomena it was invented to explain. In the words of Simplicius it must save the appearances.

An hypothesis can therefore be tested for its application to reality by the way in which it fits the observed facts. In those sciences where mathematical demonstrations are applied to natural phenomena Galileo writes the principles which are the foundations of the entire superstructure must be established by well chosen experiments. By such means Galileo chooses between the hypothesis that the uniform acceleration of a freely falling body is proportional to the units of space traversed and the hypothesis that it is proportional to the units of time elapsed.

To borrow Plato's expression in the *Timaeus* the mathematical consistency of a theory makes it a likely story. The theoretical integrity of the hypothesis makes it credible. But when competing credible hypotheses exist each saving the relevant appearances equally well which is to be believed? The fact that one of them as in the case of the Copernican Ptolemaic controversy is mathematically superior cannot decide the question since the question is Which is true of reality?

Sometimes a single fact such as the phenomenon of the Foucault pendulum may exercise a decisive influence if one of the two competing theories finds that fact congenial and the other leaves it inexplicable. Sometimes as appears in the discussion of the Copernican hypothesis in the chapter on ASTRONOMY of two hypotheses which are equally satisfactory so far as purely astronomical phenomena are concerned one may have the additional virtue of covering other fields of phenomena which that hypothesis was not originally designed to explain.

As interpreted by Kepler and as developed in Newton's theory of universal gravitation

the Copernican hypothesis brings the terrestrial phenomena of the tides and of falling bodies under the same set of laws which applies to the celestial motions. The hypothesis then has the amazing quality of consilience—a bringing together under one formulation of phenomena not previously thought to be related. This seems to be what Huygens has in mind when he considers the degree of probability that is attainable through experimental research. We have scarcely less than complete proof, he writes when things which have been demonstrated by the principles assumed correspond perfectly to the phenomena which experiment has brought under observation and further principally when one can imagine and foresee new phenomena which ought to follow from the hypotheses which one employs and when one finds that therein the fact corresponds to our provision.

Then in common parlance we say that it is no longer a theory but has become a fact. Yet the question remains whether the empirical tests which eliminate the less satisfactory hypothesis can ever make the more satisfactory hypothesis more than a likely story.

In the *Mathematical Principles of Natural Philosophy*, Newton says: I have not been able to discover the cause of those properties of gravity from phenomena and I frame no hypotheses for whatever is not deduced from the phenomena is to be called an hypothesis and hypotheses whether metaphysical or physical, either of occult qualities or mechanical, have no place in experimental philosophy. The context of this passage and of a similar statement at the end of the *Opticks* as well as the association in Newton's mind of hypotheses with occult qualities substantial forms, and hidden causes seems to indicate a special meaning of hypothesis.

Newton entitles the vortices in the physics of Descartes on the ground that it is unnecessary to appeal to occult or unobservable entities in order to explain natural phenomena. The Cartesian vortices like the substantial forms of Aristotle are for Newton hypotheses in a very special sense. They are *hypothetical entities*. They are not inferred from the phenomena. Although treated as if they were realities under-

lying the phenomena they are as Gilbert says of the *primum mobile* a fiction something not comprehensible by any reasoning and evidenced by no visible star but purely a product of imagination and mathematical hypothesis.

There is almost a play on words in this identification of hypotheses with imaginary entities to which reality is attributed for in their Greek and Latin roots the words hypothesis and hypostasis, supposition and substance are closely related. The first word in each of these pairs refers to a *proposition* which underlies reasoning the second to a *reality* which underlies observable qualities or phenomena. To make hypotheses in the sense in which Newton excludes them from experimental philosophy is to *hypostatize* or to *reify*, that is, to make a thing out of or to give reality to a fiction or construction of the mind.

It has seemed to some critics that no less than the Cartesian vortices, the ether in Newton's theory of light is an hypothesis in precisely this sense—an imaginary entity. For many centuries the atoms and molecules postulated to explain chemical combinations and changes were attacked as fictions and defended as useful hypotheses. On the one hand there is an issue concerning the theoretic usefulness of such constructions on the other a question concerning their counterparts in reality.

It is sometimes thought that fictions are useful for purposes of explanation even when their unreality is admitted. Rousseau for example explicitly denies any historical reality to the idea of man living in a state of nature prior to the formation of society by the social contract. In this matter he says we can lay facts aside as they do not affect the question. These related notions—the state of nature and the social contract—are rather calculated to explain the nature of things, than to ascertain their actual origin just like the hypotheses which our physicists daily form respecting the formation of the world.

Similarly Lavoisier posits the existence of "caloric" for its explanatory value. It is difficult" he writes "to comprehend these phenomena without admitting them as the effects of a real and material substance or very subtle fluid which insinuating itself between the particles of bodies separates them from each

other and even allowing the existence of this fluid to be hypothetical we shall see in the sequel that it explains the phenomena of nature in a very satisfactory manner

ONE OTHER MEANING of hypothesis remains to be considered It is the sense in which postulates or assumptions are distinguished from axioms in the foundations of a science In Euclid's geometry as in Descartes both sorts of principles appear The axioms or common notions are those propositions which are immediately seen to be true without proof The postulates or assumptions are hypotheses in the sense that their truth is taken for granted without proof

Both sorts of propositions serve as principles or starting points for the demonstration of theorems or the conclusions of the science Both are principles of demonstration in that they are used to demonstrate other propositions without themselves being demonstrated But axioms are traditionally regarded as intrinsically indemonstrable whereas hypotheses—postulates or assumptions—may not be indemonstrable They are simply asserted without demonstration

The possibility of demonstrating an hypothesis gives it the character of a provisional assumption In the *Discourse on Method* Descartes refers to certain matters assumed in his *Dioptrics* and *Meteors* and expresses his concern lest the reader should take offence because I call them hypotheses and do not appear to care about their proof He goes on to say

I have not named them hypotheses with any other object than that it may be known that while I consider myself able to deduce them from the primary truths which I explained above yet I particularly desired not to do so in order that certain persons may not for this reason take occasion to build up some extravagant philosophical system on what they take to be my principles

The distinction between axioms and postulates or hypotheses raises two issues The first concerns the genuineness of the distinction it self Axioms self evident propositions or what William James calls necessary truths have been denied entirely or dismissed as tautologies The only principles of science must then be

hypotheses—assumptions voluntarily made or conventionally agreed upon This issue is more fully discussed in the chapter on PRINCIPLE The other issue presupposes the reality of the distinction but is concerned with different applications of it in the analysis of science

Aristotle for example defines scientific knowledge in terms of three elements one of which consists of the *primary premises* upon which demonstrations rest The principles of a particular science may be axioms in the strict sense of being self evident truths and hence absolutely indemonstrable or they may be provisional assumptions which though not proved in this science can nevertheless be proved by a higher science as in the application of geometrical demonstrations to theorems in mechanics or optics or of arithmetical demonstrations to those of harmonics The latter are not axioms because they are demonstrable yet in a particular science they may play the role of axioms insofar as they are used without being demonstrated to demonstrate other propositions

Reasoning which rests either on axioms or on demonstrable principles Aristotle calls *scientific* but reasoning which rests only on hypotheses he regards as *dialectical* Reasoning results in scientific demonstration according to Aristotle when the premises from which the reasoning starts are true and primary or are such that our knowledge of them has originally come through premises which are primary and true In contrast reasoning is dialectical if it reasons from opinions that are generally accepted and Aristotle explains those opinions are generally accepted which are accepted by everyone or by the majority or by the philosophers—*i.e.* by all or by a majority or by the most notable and illustrious of them In an other place he adds one important qualification In defining a dialectical proposition as one that is held by all men or by most men or by the philosophers he adds provided it be not contrary to the general opinion for a man would assent to the view of the philosophers only if it were not contrary to the opinions of most men

For Aristotle dialectical reasoning or argument moves entirely within the sphere of opinion Even an opinion generally accepted not only by the philosophers but also by most

men, remains an opinion. The best opinions are probabilities—propositions which are not self evident and which cannot be proved. They are not merely provisional assumptions. Resting on assumptions which cannot ever be more than probable the conclusions of dialectical reasoning are also never more than probable. Since they lack the certain foundation which axioms give they cannot have the certitude of science.

Plato, on the other hand, seems to think that the mathematical sciences are hypothetical in their foundation, and that only in the science of dialectic, which he considers the highest, does the mind rise from mere hypotheses to the ultimate principles of knowledge. The students of geometry, arithmetic, and the kindred sciences," Socrates says in the *Republic*, "assume the odd and the even, and the figures and the three kinds of angle and the like in their several branches of science; these are their hypotheses, which they and every body are supposed to know, and therefore they do not design to give an account of them either to themselves or others." There is a higher sort of knowledge, he goes on, "which reason herself attains by the power of dialectic using the hypotheses not as first principles, but only as hypotheses—that is to say as steps and points of departure into a world which is above hypotheses, in order that she may soar beyond them to first principles.

The issue between Plato and Aristotle may be only a hal—a difference in the use of such words as "science" and "dialectic." Whether it is verbal or real is considered in the chapters on Dialectic and Metaphysics. In any case, the issue throws light on the difference between an hypothesis as a mere provisional assumption, susceptible to proof by higher principles, and an hypothesis as a probability taken for granted for the purposes of argument which is itself incapable of being proved.

For us we come to the meaning of "hypothetical" in the analysis of propositions and judgments. The distinction between the categorical and the hypothetical proposition or judgment, briefly touched on in Aristotle's *Organon*, is developed in the tradition of logic which begins with that book.

In his work on Interpretation he dis-

tinguishes between simple and compound propositions. The compound proposition consists of several simple propositions in some logical relation to one another. In the tradition of logical analysis, three basic types of relation have been defined as constituting three different kinds of compound proposition. One type of relation is the *conjunction*: it is signified by the word "and." Another is the *disjunction*: it is signified by the words "either . . . or . . ." The third type is the *hypothetical* and is signified by the words "if . . . then . . ."

To take an example we have already used: "Virtue is knowledge" and "Virtue is teachable" are simple propositions. In contrast the statement, "If virtue is knowledge then virtue is teachable" is a compound proposition hypothetical in form. If the proposition were stated in the sentence "either virtue is knowledge or it is not teachable" it would be disjunctive in form. If stated in the sentence "If virtue is knowledge and virtue is teachable" it would be conjunctive in form. In each of these three cases, the compound proposition consists of the two simple propositions with which we began though in each case they appear to be differently related.

Whereas Aristotle divides propositions into simple and compound Kant divides all judgments into the categorical, the hypothetical, and the disjunctive. In the categorical judgment, he says, "we consider two concepts in the hypothetical, 'two judgements' in the disjunctive "several judgements in their relation to one another." As an example of the hypothetical proposition he offers the statement "If perfect justice exists, the obstinately wicked are punished." As an example of the disjunctive judgment we may say "[that] the world exists either by blind chance or by internal necessity or by an external cause." Each of these three alternatives, Kant points out "occupies a part of the sphere of all possible knowledge with regard to the existence of the world while all together occupy the whole sphere." The hypothetical judgment does no more than state the relation of two propositions. Whether both these propositions are true remains unsettled. It is only the consequence," Kant says, "which is laid down by this judgement."

other and even allowing the existence of this fluid to be hypothetical we shall see in the sequel that it explains the phenomena of nature in a very satisfactory manner.

ONE OTHER MEANING of hypothesis remains to be considered. It is the sense in which postulates or assumptions are distinguished from axioms in the foundations of a science. In Euclid's geometry as in Descartes' both sorts of principles appear. The axioms or common notions are those propositions which are immediately seen to be true without proof. The postulates or assumptions are hypotheses in the sense that their truth is taken for granted without proof.

Both sorts of propositions serve as principles or starting points for the demonstration of theorems or the conclusions of the science. Both are principles of demonstration in that they are used to demonstrate other propositions without themselves being demonstrated. But axioms are traditionally regarded as intrinsically indemonstrable whereas hypotheses—postulates or assumptions—may not be indemonstrable. They are simply asserted without demonstration.

The possibility of demonstrating an hypothesis gives it the character of a provisional assumption. In the *Discourse on Method* Descartes refers to certain matters assumed in his *Dioptrics* and *Meteors* and expresses his concern lest the reader should take offence because I call them hypotheses and do not appear to care about their proof. He goes on to say

I have not named them hypotheses with any other object than that it may be known that while I consider myself able to deduce them from the primary truths which I explained above yet I particularly desired not to do so in order that certain persons may not for this reason take occasion to build up some extravagant philosophical system on what they take to be my principles.

The distinction between axioms and postulates or hypotheses raises two issues. The first concerns the genuineness of the distinction it self. Axioms self evident propositions or what William James calls necessary truths have been denied entirely or dismissed as tautologies. The only principles of science must then be

hypotheses—assumptions voluntarily made or conventionally agreed upon. This issue is more fully discussed in the chapter on PRINCIPLE. The other issue presupposes the reality of the distinction but is concerned with different applications of it in the analysis of science.

Aristotle for example defines scientific knowledge in terms of three elements one of which consists of the *primary* premises upon which demonstrations rest. The principles of a particular science may be axioms in the strict sense of being self evident truths and hence absolutely indemonstrable or they may be provisional assumptions which though not proved in this science can nevertheless be proved by a higher science as in the application of geometrical demonstrations to theorems in mechanics or optics or of arithmetical demonstrations to those of harmonics. The latter are not axioms because they are demonstrable yet in a particular science they may play the role of axioms insofar as they are used without being demonstrated to demonstrate other propositions.

Reasoning which rests either on axioms or on demonstrable principles Aristotle calls *scientific* but reasoning which rests only on hypotheses he regards as *dialectical*. Reasoning results in scientific demonstration according to Aristotle when the premises from which the reasoning starts are true and primary or are such that our knowledge of them has originally come through premises which are primary and true. In contrast reasoning is dialectical if it reasons from opinions that are generally accepted and Aristotle explains those opinions are generally accepted which are accepted by everyone or by the majority or by the philosophers—*i.e.* by all or by a majority or by the most notable and illustrious of them. In an other place he adds one important qualification. In defining a dialectical proposition as one that is held by all men or by most men or by the philosophers he adds provided it be not contrary to the general opinion for a man would assent to the view of the philosophers only if it were not contrary to the opinions of most men.

For Aristotle dialectical reasoning or argument moves entirely within the sphere of opinion. Even an opinion generally accepted not only by the philosophers but also by most

## REFERENCES

To find the passages cited, use the numbers in heavy type, which are the volume and page numbers of the passage referred to. For example in *4 Homer Iliad*, BK II [26, 29] 12d, the number 4 is the number of the volume in the set; the number 12d indicates that the passage is in section d of page 12.

**PAGE 5** **CITATIONS** When the text is printed in one column, the letters a and b refer to the upper and lower halves of the page. For example, in *53 James Psychology* 116a 119b the passage begins in the upper half of page 116 and ends in the lower half of page 119. When the text is printed in two columns, the letters a and b refer to the upper and lower halves of the left hand side of the page, the letters c and d to the upper and lower halves of the right hand side of the page. For example, in *7 Pl. to Symposium* 163b-164c the passage begins in the lower half of the left hand side of page 163 and ends in the upper half of the right hand side of page 164.

**Author's Editions** One or more of the main editions of a work (such as P. AT. BE. CH. SECT.) are sometimes included in the reference line numbers, in brackets, after certain cases e.g. *Iliad* BK II [26, 29] 12d.

**BIBLE REFERENCES** The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a (D) follows e.g. *Old Test. MINT v. Aeneas* 7-45-(D) *II Esdras* 7-46

**Symbols** The abbreviation "esp." calls the reader's attention to one or more especially relevant parts. If a whole reference "passim" signifies that the topic is discussed intermittently rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style for general guidance in the use of *The Great Ideas*; consult the Preface.

In the *Prior Analytics* Aristotle distinguishes between the categorical and the hypothetical syllogism. The following reasoning is categorical in form. Knowledge is teachable, virtue is knowledge, therefore virtue is teachable. The following reasoning is hypothetical in form. If virtue is knowledge it is teachable, but virtue is knowledge, therefore it is teachable or If virtue is knowledge it is teachable, but virtue is not teachable, therefore it is not knowledge.

The basic issue with respect to the distinction between categorical and hypothetical syllogisms is whether the latter are always reducible to the former. One thing seems to be clear. The rules for the hypothetical syllogism formally parallel the rules for the categorical syllogism. In hypothetical reasoning the consequent must be affirmed if the antecedent is affirmed; the antecedent must be denied if the consequent is denied. In categorical reasoning the affirmation of the premises requires an affirmation of the conclusion and a denial of the conclusion requires a denial of the premises.

With respect to the distinction between the categorical and hypothetical proposition there is also an issue whether propositions stated in one form can always be converted into propositions having the other form of statement. In modern mathematical logic for example general propositions such as All men are mortal are sometimes expressed in hypothetical form

If anything is a man it is mortal. Logicians like Bertrand Russell think that the hypothetical form is more exact because it explicitly refrains from suggesting that men exist; it merely states that if the class man should have any existent members they will also belong to the class mortal.

Apart from the question whether a universal proposition should or should not be interpreted as asserting the existence of anything there seems to be a formal difference between the categorical and hypothetical proposition. This is manifest only when the hypothetical is truly a compound proposition, not when it is the statement of a simple proposition in hypothetical form as for example the simple proposition All men are mortal is stated in hypothetical form by If anything is a man it is mortal. Because it is truly a compound proposition and not merely the hypothetical statement of a general proposition, the proposition

If virtue is knowledge then virtue is teachable cannot be restated in the form of a simple categorical proposition.

A simple proposition whether stated categorically or hypothetically may be the conclusion of either a categorical or a hypothetical syllogism. But the hypothetical statement which is really a compound proposition can never be the conclusion of any sort of syllogism though it may be one of the premises in hypothetical reasoning.

# Chapter 37 IDEA

## INTRODUCTION

AS the topical analysis or outline in each chapter indicates, the great ideas are not simple objects of thought. Each of the great ideas seems to have a complex interior structure—an order of parts involving related meanings and diverse positions which, when they are opposed to one another determine the basic issues in that area of thought.

The great ideas are also the conceptions by which we think about things. They are the terms in which we state fundamental problems; they are the notions we employ in defining issues and discussing them. They represent the principal content of our thought. They are what we think as well as what we think about.

If, in addition to its objects and content we wish to think about *thought* itself—its acts or processes—we shall find in the tradition of the great books a number of related terms which indicate the scope of such inquiry. Some of them are idea, judgment, understanding and reasoning, perception, memory and imagination on sense and mind. Here we are concerned with one of these—the idea Idea. It is probably the most elementary of all these related terms, for according to different conceptions of the nature and origin of idea, the analysis of thought and knowledge will vary. Different positions will be taken concerning the faculties by which men know the acts and processes of thinking and the limits of human understanding.

Does the word idea when it is used in the technical discourse of metaphysics or psychology signify that which is known or understood? Does it signify not the object of thought but the thought itself? Or both? Certainly in popular speech the word is used both ways for men speak of understanding an idea and note differences in their understanding of the same

idea and they also say that they have different ideas about the same thing meaning that they understand the same thing differently.

The word idea has many other oppositions of meaning in its tremendous range of ambiguity. It is sometimes used exclusively for the eternal types in the divine mind or the intelligible forms that exist apart from material things which are their copies sometimes for concepts in the human mind abstracted from sense-experience sometimes for the seeds of understanding which belong innately to the intellect and do not need to be derived from sense. Sometimes idea means a sensation or a perception as well as an abstract thought and then its connotation extends to almost every type of mental content sometimes it is denied that there are any abstract or general ideas and sometimes "idea" has the extremely restricted meaning of an image which is the memory of a sense-impression.

Kant vigorously protests against what he thinks is a needless abuse of the term idea. I beg those who really have philosophy at heart he writes, to exert themselves to preserve to the expression idea its original signification. There is, he insists, no want of words to denote adequately every mode of representation without encroaching upon terms which are proper to others.

Kant proposes a graduated list of such terms. He begins with perception which he divides into *sensation* and *cognition* according as it is subjective or objective. A cognition, he then goes on, is either an *intuition* or a *concept*, according as it has either an immediate or a mediate relation to its object. Dividing conceptions into the empirical and the pure Kant finally reaches the term idea as one subdivision of pure conception. If the pure conception has its origin in the understanding

tion which would destroy the universe of discourse. There is a slender thread of meaning which ties all the elements of the tradition together—not in a unity of truth or agreement but in an intelligible joining of issues.

This unity can be seen in two ways. It appears first in the fact that any consideration of ideas—whether as objects or contents of the mind—implies a theory of knowledge. This much is common to all meanings of idea.

Those like Plato and Berkeley, for whom ideas constitute a realm of intelligible or sensible being, make knowledge of reality consist in the apprehension or understanding of ideas. Those like Aristotle and James, for whom ideas have no being except as perceptions or thoughts, make them the instruments whereby reality is known. On either view, knowledge involves a relationship between a knower and a known or between a knowing faculty and a knowable entity, but on one view ideas are the reality which is known and on the other they are the representations by which is known a reality that does not include ideas among its constituents. These two views do not exhaust the possibilities.

Ideas are sometimes regarded both as objects of knowledge and as representations of reality. Some writers (as for example Plato) distinguish two orders of reality—the sensible and the intelligible—and two modes of apprehension—sensing and understanding and they use the word idea for both the intelligible object and the understanding of it. Locke beginning the reader's pardon for his frequent use of the word idea says that it is the term which serves best to stand for whatever is the object of the understanding when a man thinks. But Locke also distinguishes between knowledge of real existences through ideas that the mind has of things as they are in themselves and knowledge of the relations among our own ideas, which the mind gets from their comparison with one another. For Hume too, ideas as well as impressions are involved in our knowledge of matters of fact but relations between ideas may also be objects of knowledge as in the sciences of geometry, algebra and arithmetic.

This double use of idea is sometimes accompanied as in Aquinas, by an explicit ac-

knowledgement and ordering of the two senses. For Aquinas concepts are primarily the means of knowledge not the objects of knowledge. A concept Aquinas writes is not what is actually understood but that by which the intellect understands—that by which something else is known. Secondly however concepts become that which we know when we reflexively turn our attention to the contents of our own mind. Using the phrase "intelligible species" to signify concepts Aquinas explains that since the intellect reflects upon itself by such reflection it understands not only its own act of intelligence but also the species by which it understands. Thus the intelligible species is that which is understood secondarily but that which is primarily understood is the object of which the species is the likeness.

It is possible therefore to have ideas about things or ideas about ideas. In the vocabulary of this analysis by Aquinas, the ideas or concepts whereby real things are understood are sometimes called the first intentions of the mind. The ideas whereby we understand these ideas or first intentions are called the mind's second intentions. An idea is always a mental intention—an awareness or representation never an independent reality for the mind to know.

Locke's differentiation between ideas of sensation and ideas of reflection seems to parallel the mediaeval distinction between first and second intentions but whereas second intentions are ideas engaged in a reflexive understanding of ideas as objects to be understood Locke's ideas of reflection comprise the perception of the operations of our own mind with in us as it is employed about the ideas it has got. A closer parallel perhaps is to be found in Locke's distinction between our knowledge of reality or of real existences and our knowledge of the relations existing between our own ideas.

The second way of setting a connection among meanings of idea depends on recognizing what is common to contrary views.

The word pen is utterly equivocal as we have noted, when it names a writing instrument and an animal enclosure. Hence men

alone and is not the conception of a pure sensuous image it is a *notio* or notion and a conception formed from notions which transcends the possibility of experience is an idea or a conception of reason

According to Kant anyone ' who has accustomed himself to these distinctions will find it quite intolerable to hear the representation of the color red called an idea. Tolerable or intolerable the word idea has been used quite persistently with the very meaning that Kant abominates as well as with a variety of others. The reader of the great books must be prepared for all these shifts in meaning and with them shifts in doctrine for according to these differences in meaning there are different analyses of the nature or being of ideas different accounts of their origin or their coming to be in the human mind and different classifications of ideas. These three questions—what ideas are how ideas are obtained and of what sorts they are—are so connected that the answer given to one of them tends to circumscribe the answers which can be given to the other two.

THE UNITY OF EACH chapter in this guide to the great books depends on some continuity of meaning in its central term some common thread of meaning however thin or tenuous which unites and makes intelligible the discussions of various authors about the same thing. Without this they would not move in the same universe of discourse at all. Nor could they even disagree with one another if the words they used were utterly equivocal as for example the word pen is equivocal when it designates a writing instrument and an enclosure for pigs.

The extraordinary ambiguity of the word idea as it is used in the great books puts this principle to the test. Are Plato and Hume talking about the same thing at all when the one discusses ideas as the only intelligible reality and the other treats ideas as the images derived through memory from the original impressions of sense experience? Is there any common ground between Aristotle and Berkeley—between the identification of human ideas with abstract or general conceptions quite distinct from the perceptions or images of sense and the

identification of ideas with particular perceptions accompanied by a denial of abstract or general notions?

Do writers like Locke or William James for whom ideas of sensation and abstract ideas (or percepts and concepts) belong to the one faculty of understanding or to the single stream of consciousness communicate with writers like Plotinus Descartes and Spinoza for whom ideas belong to the intellect or to the thinking being separate from matter and from sensations which are only bodily reactions? Or with writers like Aristotle and Aquinas for whom there is a sharp distinction between the faculties of sense and intellect? Can Aristotle and Aquinas in turn explain the origin of concepts or intelligible species by reference to the intellect's power of abstracting them from experience or sensible species and still carry on discussion with Plato Augustine and Descartes who regard the intellect as in some way innately endowed with ideas with the principles or seeds of understanding?

The foregoing is by no means an exhaustive inventory. It fails for example to ask about the sense in which the theologians speak of ideas in the mind of God and of the illumination of the angelic or the human intellect by ideas divinely infused (What is the common thread of meaning between such discourse and that concerned with the formation of abstract concepts or with the revival of sense impressions in images?) It fails also to question the meaning of idea in Kant's tripartite analysis of the faculties of intuition judgment and reasoning or in Hegel's ultimate synthesis of all nature and history in the dialectical life of the Absolute Idea (What do these meanings of idea have in common with the sense in which Freud distinguishes between conscious and unconscious ideas?)

The inventory is also incomplete in that it does not indicate the many divergent routes taken by authors who seem to share a common starting point. Even those who on certain points seem to talk the same language appear to have no basis for communication on other points in the theory of ideas. But the questions which have been asked suffice for the purpose at hand. However great the ambiguity of idea it does not reach that limit of equivoca-

Just as the extreme version of the first position is taken by those who identify ideas with perceptions, so here the opposite extreme consists in the denial of any connection between ideas and all the elements of sense-experience. Ideas in the divine mind, or the ideas introduced by God into the angelic intellects, have no origin in experience nor any need for the perceptions, memories, or images of sense. They are not abstract ideas, that is, they are not concepts abstracted from sense materials.

"Our intellect," Aquinas writes, "abstracts the intelligible species from the undividuating principles"—the material conditions of sense and emanation. But the intelligible species in the divine intellect "he continues, is immaterial not by abstraction, but of itself. The divine ideas, Aquinas quotes Augustine as saying, "are certain original forms or permanent and immutable models of things which are contained in the divine intelligence." Following Augustine's statement that each thing was created by God according to the idea proper to it, Aquinas restricts the word "idea" to the exemplars existing in the divine mind and to the species of things with which God informs the angelic intellects. He uses the word "concept" where others speak of "ideas" in the human mind.

Descartes, on the other hand endows the human mind with ideas—not concepts abstracted from and dependent on sense, but intuitive apprehensions which, since they cannot be drawn in any way from sense-experience, must be an innate property of the human mind. He does not however always use the word "idea" in this strict sense. Some ideas, he says, "appear to be innate some adventurous, and others to be formed or invented by myself." The ideas called "adventitious" are those which seem to come from the outside, as when "I hear some sound or see the sun or feel heat." Those which we form or invent ourselves are "constructions of the imagination. Only innate ideas, in Descartes' view are truly ideas in the sense of being the elements of certain knowledge and the sources of intellectual intuition. By intuition," he says, "I understand, not the fluctuating testimony of the senses, nor the misleading judgment that proceeds from the huddled constructions of the imagination."

but "the undoubtless conception of an unclouded and attentive mind which springs from the light of reason alone."

As mind and body are separate substances for Descartes—mind being conceived by him as a *res cogitans* or thinking substance quite separate from a *res extensa* or the extended matter of a bodily substance—so ideas and sensations are independent in origin and function. Like infused ideas in the angelic intellect innate ideas in the human mind are not abstract for they are not abstracted. But unlike the angelic intellect the human mind even when it employs innate ideas, is discursive or cognitive. It is never conceived as entirely free from the activities of judgment and reasoning even when its power is also supposed to be intuitive—that is, able to apprehend intelligible objects without analysis or without recourse to the representations of sense.

The doctrine of innate ideas does not always go as far as this in separating intellectual knowledge—or knowledge by means of ideas—from sense-experience. In the theories of Plato and Augustine for example sense-experience serves to awaken the understanding to apprehend the intelligible objects for the intuition of which it is innately equipped.

To learn those things which do not come into us as images by the senses," Augustine writes, "but which we know within ourselv[es] without images . . . is in reality only to take things that the memory already contains scattered and unarranged . . . and by thinking bring them together." Moreover the memory contains, not only "images impressed upon it by the senses of the body but also the natures of the very things themselves, which notions we never received by any avenue of the body."

This process of learning by remembering appears to be similar to the process which Plato also calls "recollection" or reminiscence. In the *Meno* Socrates demonstrates that a slave-boy who thinks he knows no geometry can be led simply by questioning to discover that he knew all the while the solution of a geometric problem. "There have always been true thoughts in him," Socrates tells Meno thoughts "which only needed to be awakened into knowledge by putting questions to him. Hence "his soul must always have possessed this knowledge."

cannot contradict one another no matter what opposite things they may say about pens in one sense and pens in the other. The two meanings of pen are not even connected by being opposed to one another. But all the meanings of idea do seem to be connected by opposition at least so that writers who use the word in its different senses and have different theories of idea cannot avoid facing the issues raised by their conflicting analyses.

The root of this opposition lies in the positive and negative views of the relation of ideas to sensations—or more generally to sense and the sensible. Though there are different analyses of sensation one or both of two points seems to be agreed upon that sensations are particular perceptions and that sensations result from the impingement of physical stimuli upon the sense organs of a living body.

Berkeley insists upon the first point while emphatically denying the second. Ideas or sensations are always particulars but he says the various sensations or ideas imprinted on the sense however blended or combined together (that is whatever objects they compose) can not exist otherwise than in a mind perceiving them and their cause is neither physical matter nor the perceiving mind but some other will or spirit that produces them. Others like Lucretius and Hobbes who regard sensations as particular perceptions do not use the word idea as Berkeley does for perceptions of external origin but restrict it to inner productions of the mind itself in its acts of memory or imagination.

The various theories of idea thus range from those which identify an idea with a sensation or perception or with the derivatives of sensation to those which deny the identity or even any relationship between ideas and sensations or images of sense.

**THE FIRST POSITION** is taken by writers who conceive mind or understanding in men or animals as the only faculty of knowledge. It performs all the functions of knowing and thinking. It is sensitive as well as reflective. It perceives and remembers as well as imagines and reasons.

Within this group of writers there are differences. Berkeley for example thinks the ob-

jects of human knowledge include either ideas actually imprinted on the senses or else such as are perceived by attending to the passions and operations of the mind or lastly ideas formed by the help of memory and imagination—either compounding dividing or barely representing those originally perceived in the aforesaid ways. Hume on the other hand divides all the perceptions of the mind into two classes or species which are distinguished by their different degrees of force or vivacity. The less forcible and lively are commonly denominated *Thoughts or Ideas*. The other species want a name in our language and in most others.

Let us therefore use a little freedom and call them *Impressions*. By this term Hume explains I mean all our more lively perceptions when we hear or see or feel or love or hate or desire or will.

Another use of terms is represented by Locke who distinguishes between ideas of sensation and reflection simple and complex ideas particular and general ideas and uses the word idea both for the original elements of sense experience and for all the derivatives produced by the mind's activity in reworking these given materials whether by acts of memory imaginative construction or abstraction. Still another variation is to be found in William James. Despite the authority of Locke he thinks that the word idea has not domesticated itself in the language so as to cover bodily sensations. Accordingly he restricts the word idea to concepts and never uses it for sensations or perceptions. Nevertheless like Locke he does not think that the development of concept from percept needs the activity of a special faculty. Both concept and percept belong to the single stream of thought and are states of consciousness.

**THE SECOND POSITION** is taken by writers who in one way or another distinguish between sense and intellect and regard them as quite separate faculties of knowing. The one is supposed to perform the functions of perception imagination and memory the other the functions of thought—conception judgment and reasoning or if not these then acts of intellectual vision or intuition. Here too there are differences within the group.

the Ideas or Forms apart from both matter and mind. It is in the context of this argument that the traditional epithet realism gets one of its meanings, when it signifies the view that ideas or universals have an independent reality of their own. The various opponents of this view are not called idealists. If they deny any existence to universal ideas outside the mind they are usually called conceptualists; if they deny the presence of universals even in the mind they are called "nominalists." These doctrines are more fully discussed in the chapters on SAME AND OTHER, UNIVERSAL AND PARTICULAR.

The controversy about the being of ideas has another phase that has already been noted in this chapter and it is in this connection that the epithet "idealism" gets one of its traditional meanings. The doctrine is not that ideas have real existence outside the mind. On the contrary it is that the only realities are mental—either minds or the ideas in them.

Berkeley's famous proposition—*esse est percipi*—to be is to be perceived—seems intended to permit only one exception. The perceiving mind has being without being perceived but nothing else has. Everything else which exists is an idea, a being of and in the mind. According to this doctrine (which takes different forms in Berkeley and in Hegel for example) the phrase "*idea of*" is meaningless. *Nothing exists of which an idea can be a representation.* There is no meaning to the distinction between thing and idea. The real and the ideal are identical.

Plato is sometimes called an "idealist" but not in this sense. He has never been interpreted as completely denying reality to the changing material things which imitate or copy the eternal ideas, the unmutable archetypes or Forms. Applied to Plato or to Plotinus, idealism seems to signify the superior reality of ideal (as opposed to material or physical) existence. Just as idealism has three widely divergent meanings, so does realism when it designates, on the one hand those who attribute independent reality to ideas and on the other hand those who affirm the existence of an order of real existences independent of the ideas which represent them in the mind.

Workers who distinguish between things and ideas, or between the order of reality and the

mind's conception of it face the problem of differentiating between these two modes of being. To say that ideas or concepts exist only in the mind is not to say that they do not exist at all but only that they do not exist in the same way as things outside the mind.

Does an entity in its real existence apart from knowledge have the same character that it has when as an object known it somehow belongs to the knowing mind? Is there a kind of neutral essence which can assume both modes of existence—real existence independent of mind and ideal existence or existence in the mind as an object conceived or known? Is an idea or concept in the mind nothing but the real thing objectified or transformed into an object of knowledge or is the real thing the thing in itself, utterly different from the objects of experience or knowledge—neither knowable nor capable of representation by concepts?

These questions, relevant to the consideration of ideas as representations of reality are of course also relevant to problems considered in the chapters on BEING, EXPERIENCE, and KNOWLEDGE. The issues indicated are there discussed.

Intimately connected with them are questions about the truth of ideas. Can ideas or concepts be true or false in the sense in which truth and falsity are attributed to propositions or judgments? Under what conditions is an idea true? In what does its truth consist and what are the signs or marks of its truth? These matters are discussed in the chapter on TRUTH. Here it is sufficient to point out that the traditional distinction between adequate and inadequate ideas, and the comparison of clear and distinct with obscure and confused ideas are used to determine the criteria of truth. It may be the truth of a concept taken by itself or of the judgment into which several concepts enter. To the extent that ideas are regarded as representative their truth (or the truth of the judgments they form) seems to consist in some mode of agreement or correspondence with the reality they represent or as Spinoza says *its ideatum*.

If thus the conceptual or mental order it self, there is a further distinction between ideas which do not perform a representative function and those which do. The former are treated as

Learning according to this doctrine of innate ideas must therefore be described as an attempt to recollect not what you do not know but rather what you do not remember

Learning by recollection or reminiscence seems to be a process in which latent ideas (whether they are retained by the soul from a previous life or are part of the soul's endowment at its creation) become active either through the questioning of a teacher or through being awakened by the perceptions of the bodily senses. Though such bodily stimulation of thought implies a functional connection between body and soul nevertheless both Plato and Augustine hold that ideas are independent in origin. They are not derived from sense though their appearance may be occasioned by events in the world of sense.

ONE OTHER VIEW still remains to be considered. It denies that ideas are innate in the human mind at the same time that it distinguishes between the intellect and the senses as separate faculties of knowing. Having to explain whence the intellect gets its ideas writers like Aristotle and Aquinas attribute to the human intellect an abstractive power by which it draws the intelligible species from sensory images which Aquinas calls phantasms.

The concepts by which our intellect understands material things we obtain by abstracting the form from the individual matter which is represented by the phantasms. Through the universal concept thus abstracted we are able Aquinas holds to consider the nature of the species apart from its individual principles. It should be added here that abstractions are not vehicles of intuitive apprehension. Conception which is the first act of the mind yields knowledge only when concepts are used in subsequent acts of judgment and reasoning.

Abstract or universal concepts are as different from the ideas which belong to intellects separate from bodies—the divine or angelic intellects—as they are different from the particular perceptions or images of sense. They occupy an intermediate position between the two just as according to Aquinas the human intellect holds a middle place between angelic intellects and corporeal sense. On the one hand the human intellect is for Aquinas an incorporeal power; on the other hand it functions only in cooperation with the corporeal powers of sense and imagination. So the concepts which the human intellect forms being universal are immaterial but they are also dependent in origin and function on the materials of sense. Not only are universal concepts abstracted from the phantasms but for the intellect to understand physical things it must of necessity Aquinas writes turn to the phantasms in order to perceive the universal nature existing in the individual.

This theory of abstract ideas seems not far removed from the position of Locke who distinguishes between particular and general ideas (which he calls abstract) or that of William James who distinguishes between universal concepts and sense perceptions. Yet on one question the difference between them is radical namely whether particular sensations and universal ideas belong to the same faculty of mind or to the quite distinct faculties of sense and intellect.

This difference seems to have considerable bearing on the way in which these writers explain the process of abstraction or generalization with consequences for certain subtleties acknowledged or ignored in the analysis of the grades of abstraction. Nevertheless the resemblance between the positions of Locke and Aquinas or those of William James and Aristotle each affirming in his own way that the mind contains nothing not rooted in the senses serves to mediate between the more extreme positions.

THE DISPUTE ABOUT INNATE IDEAS AND THE CONTROVERSY OVER ABSTRACT IDEAS ARE ISSUES IN PSYCHOLOGY inseparable from fundamental differences concerning the nature and operation of the faculty or faculties of knowing. There are other issues which concern the being or the truth of ideas. Here the first question is not whether ideas are objects of knowledge but whether the existence of ideas is real or mental—outside the mind or in it.

One aspect of this controversy is considered in the chapter on FORMS in the argument between Aristotle and Plato about the being of

less inclusive classes. What seems to be peculiar to Aristotle's analysis of species and genera is the setting of upper and lower limits to the hierarchy of universal terms, with a small number of irreducible categories (or *ta tēres genēs*) under which all species fall, and at the other extreme with a tiny number of lowest (or *mētēres*) species which are incapable of subsuming other species.

The terms which fall under the lowest species must either be particular or accidental classes. Those which seem to be predictable of the categories themselves, such as *being* or *one*, cannot be genera. These are the terms which Aristotle's mediaeval followers call "transcendental" and "alogical." Using the word "transcendental" in a different sense, Kant enumerates a set of concepts which bear some resemblance to Aristotle's *ta tēres genēs* but which he treats as transcendental categories.

The difference among concepts with respect to generality is of interest to the psychologist as well as the logician, for it raises the problem

of whether the more or the less general takes precedence in the order of learning. The order and relation of ideas is even more the common ground of both logic and psychology. Both for example deal with the position and sequence of terms or concepts in reasoning though the logician aims to prescribe the forms which reasoning must take in order to be valid whereas the psychologist tries to describe the steps by which thinking actually goes on.

Only the logician, however, is concerned with the way in which terms are ordered to one another as positive and negative or as contraries just as from Aristotle to Freud only the psychologist deals with the association of ideas in the stream of thought by relationships of contiguity and succession, similarity and difference. According as the logical connection of ideas or their psychological association is made the primary fact radically divergent interpretations are given of the nature of mind, the life of reason and the process of thought.

## OUTLINE OF TOPICS

### 1. Doctrines of idea

PAC

774

1.2 Ideas, or relations between ideas, as objects of thought or knowledge the ideas as eternal forms

774

1.4 Ideas or conceptions as that by which the mind thinks or knows

1.6 Ideas as the data of sense-experience or their residues

1.8 Ideas as the pure concepts of reason regulative principles

1.9 Ideas as the order of supra-human intelligence or spirit the eternal exemplars and archetypes the modes of the divine mind

1.5 Ideas as the unity of determinate existence and concept the Absolute Idea

773

### - The origin or derivation of ideas in the human mind

-> The infusion of ideas divine illumination

1. The innate endowment or retention of ideas the activation of the mind's native content or structure by sense by memory or by experience

-> The acquirement of ideas by perception or intuition simple ideas or forms as direct objects of the understanding

4. Reflection as source of ideas the mind's consideration of its own acts or content

774

-> The genesis of ideas b. the recollection of sense-impressions the images of sense

3. The production of ideas by the reworking of the materials of sense the imagination & construction of concepts or the formation of complex from simple ideas

fantasies fictions or chimeras the latter are called by contrast real ideas or ideas having some reference to reality The question of the reality of ideas takes precedence over the question of their truth at least for those who regard the division into true and false as applicable only to representations Yet the criteria of the distinction between the real and the imaginary are difficult to separate from the criteria of true and false The separation is made most readily by those who use idea to mean memory image They can test the reality of an idea by tracing it back to the impression from which it originated

Another sort of test is applied by those who measure the reality of abstract ideas by their fidelity to the sense perceptions from which they were abstracted Still another criterion proposed by William James is that of freedom from contradiction An idea has truth and its object has reality if it remains uncontested The idea of a winged horse illustrates the point

If I merely dream of a horse with wings James writes my horse interferes with nothing else and has not to be contradicted But if with this horse I make an inroad into the world otherwise known and say for example That is my old mate Maggie having grown a pair of wings where she stands in her stall the whole case is altered for now the horse and place are identified with a horse and place otherwise known and what is known of the latter objects is incompatible with what is perceived with the former

**THE CONSIDERATION** of ideas or concepts belongs to logic as well as to psychology and metaphysics The logician sometimes deals with concepts directly and with the judgments into which they enter sometimes he deals with them only as they find verbal expression in terms and propositions

The distinction between concepts and judgments (or between terms and propositions) is discussed in the chapter on JUDGMENT There also we see that the classification of judgments or propositions depends in part on the acceptance or rejection of the notions of subject and predicate in the analysis of concepts or terms and if they are accepted on the way in which

terms are distinguished both as subjects and as predicates

This in turn depends upon certain traditional divisions which are applicable to terms if not always to concepts such as the familiar distinctions between concrete and abstract and particular and universal terms When the concept which is sometimes called the mental word is regarded as by its very nature abstract and universal these distinctions are applicable only to the physical words which are terms Concrete and particular terms are then treated as verbal expressions of sense perceptions or images abstract and universal terms as verbal expressions of ideas or concepts But when ideas are identified with sense perceptions or images and abstract concepts are denied the existence of general names in ordinary discourse suffices for the distinction between particular and universal terms even though the latter do not express any actual content of the mind

Unlike the foregoing other divisions of terms as for example the distinction between the univocal and the analogical or between species and genera do not occur throughout the tradition of logic They tend to be characteristic of the logic of Aristotle and its mediaeval development Of these two distinctions that between univocal and analogical terms or concepts appears explicitly so far as this set of great books is concerned only in the *Summa Theologica* Nevertheless Aquinas does have some background for his special theory of analogical terms in Aristotle's treatment of univocal and equivocal names and in his separation of terms which predicate a sameness in species or genus from those which predicate a sameness by analogy The analysis of these distinctions is undertaken in the chapters on SAME AND OTHER and SIGN AND SYMBOL

Other writers in dealing with universal terms recognize that they have different degrees of generality They sometimes formulate this as an order of more and less inclusive classes Sometimes they refer to the intension and extension or connotation and denotation of terms The more general terms have a less restricted connotation and hence represent more extensive or inclusive classes The more specific terms have a more determinate meaning and so also have a narrower denotation and represent

## REFERENCES

To find the passages cited, use the numbers in **heavy type** which are the volume and page numbers of the passage referred to. For example, in **4 Hours**, **I-1d, BK II** [6], **3312d**, the number **4** is the number of the volume in the set; the number **12d** indicates that the passage is in section **d** of page **6**.

**P OF SECTIONS.** When the text is printed in one column, the letters **a** and **b** refer to the upper and lower halves of the page. For example, in **33 James Psychology** **116a-119b** the passage begins in the upper half of page **116** and ends in the lower half of page **119**. When the text is printed in two columns, the letters **a** and **b** refer to the upper and lower halves of the left hand side of the page, the letters **c** and **d** to the upper and lower halves of the right hand side of the page. For example, in **7 PLATO Symposium** **163b-164c** the passage begins in the lower half of the left hand side of page **163** and ends in the upper half of the right hand side of page **164**.

**ACTS &c DIVISIONS.** One or more of the main divisions of a work (such as **PART**, **BOOK**, **CHAPTER**, **SECT**) are sometimes included in the reference. The numbers, in brackets, are given in certain cases, e.g. **I-1d, BK II** [265-283] **12d**.

**B & RE REFERENCES.** The references are to book, chapter and verse. When the King James and Douay versions differ in title of books or in the numbering of chapters or verses, the King James version is cited first and the Douay indicated by a **(D)** follows, e.g. **Old Test MT + Nehemiah, 7-4-(D) II Exodus 7-6**.

**SYMBOLS.** The abbreviation "esp." calls the reader's attention to one or more especially relevant parts of a whole reference. "passim" signifies that the topic is discussed throughout the text rather than continuously in the work or passage cited.

For additional information concerning the style of the references, see the Explanation of Reference Style; for general guidance in the use of *The Great Ideas*, consult the Preface.

## 1 Doctrines of idea

12 Ideas & relations between ideas as objects of thought & knowledge; the ideas as eternal forms

## ADDITIONAL READINGS

Listed below are works not included in Great Books of the Western World but relevant to the idea and topics with which this chapter deals. These works are divided into two groups:

- I Works by authors represented in this collection
- II Works by authors not represented in this collection

For the date, place, and other facts concerning the publication of the works cited, consult the Bibliography of Additional Readings which follows the last chapter of *The Great Ideas*.

of consideration the theme of immortality is never merely a matter of speculative interest; never merely a question of spiritual substances and their substance. It is always a problem for the moralist.

Is this earthly life and its brief temporal panem nobis for the aspirations of the human spirit and for its striving toward a perfection of knowledge of love and of repose? If external sanctions are needed to support the voice of conscience are earthly rewards and punishments—either humanly dispensed or capriciously distributed by chance or fortune—sufficient sanction for the moral law? Can perfect justice be done unless there is a divine law and a divine judge—a judge who can see beyond the acts of men into their hearts, from whose judgment no one escapes, and whose rewards and punishments are supernaturally established states of blessedness and misery for the soul?

Whether or not God, freedom, and immortality are, as Kant suggests, the three great objects of speculative thought, they do seem to form the basis of religious beliefs. In the religions of the west these beliefs take various forms, but the belief in immortality is seldom if ever found separate from belief in a supernatural order in gods or a God to whom man owes certain duties and before whom man stands to be judged as a responsible moral agent who was free to obey or disobey the divine commands. But this fact admitted, the question remains whether the principles of morality can be adequately stated or made effective in the regulation of human conduct without a religious foundation, or at least without reference to God and immortality.

On this the moralists disagree. The argument in Plato's *Gorgias* is exemplified about whether it is better to do a suffer injustice ends with a myth which tells of the soul standing naked before its divine judge after a man's death, showing no marks of the evil the individual has suffered during his life but only of the evil he has done. The reader who thinks the myth is necessary to complete the argument concerning justice and punishment, takes one position on the question. He adopts the view that without the judgment of souls *as such* after life justice cannot be done.

The preoccupation with immortality is a

great many of Plato's dialogues is not always based upon moral considerations. It appears as frequently in discussions of the relation between the soul and the objects of its knowledge. If, to be proper objects of knowledge, the Ideas must be eternal, the soul which knows them must also be immortal. But when the discussion of immortality involves a comparison of this life and the life to come it usually turns on conceptions of goodness rather than of knowledge and truth. For Kant, if not for Plato, immortality is almost entirely a moral matter and where the Platonic myth deals with just rewards and punishments in an after life the Kantian argument is concerned with the achievement of moral perfection.

In his *Critique of Practical Reason*, Kant affirms immortality along with the existence of God and the freedom of the will as necessary practical postulates—indispensable conditions of the moral life. The perfect accordance of the will with the moral law, Kant writes, is holiness, a perfection of which no rational being of the sensible world is capable at any moment of his existence. It can only be found in a process *ad infinitum* towards that perfect accordance. It is necessary to attain such a practical progress as the real object of our will. The realization of happiness, or the sum *mors bonorum*, Kant concludes, is only possible practically on the supposition of the immortality of the soul."

The opposite view appears to be taken in Aristotle's Ethics and Mill's Utilitarianism. The summum bonum is a temporal happiness, a perfection attainable on earth and by purely natural means. In those passages in which Aristotle defines happiness in terms of contemplation etc. etc. he also speaks of it as a godlike life and before one which has a touch of immortality. Man is able to lead such a life, he writes, only "in so far as something divine is present in him. To lead the life of reason which is divine in comparison with any other mode of human life we must," he says, "so far as we can, make ourselves immortal, and strain every nerve to live in accordance with the best thing in us."

But to be immortal in this way seems to mean the possession of a godlike quality in this life rather than the promise of a life hereafter.

## Chapter 38 IMMORTALITY

---

### INTRODUCTION

THE mortality of man defines by contrast the immortality which some men hope for some men fear some men scoff at but no man ever fails sooner or later to consider The life of man like that of other animals moves through a normal span of years between birth and death Legend tells of certain heroes upon whom the immortal gods bestowed immortal life gracing them with an aspect of their own divinity Jewish and Christian faith holds that Adam with all his posterity would never have suffered disease or death if he had restrained from sin But according to the theologians the imperishability of the bodily frame of man in a state of grace is a preternatural condition Except then for the miraculous or the supernatural death follows birth and life that which comes to be passes away all things of flesh and blood perish

The proposition All men are mortal has been repeated during centuries of lessons in logic Its truth has never been seriously challenged even by those who have criticized the syllogism which reaches the conclusion that since he is a man Socrates is mortal But throughout the same period the great books of poetry and religion of philosophy and theology have recorded the qualifications which men have placed upon this truth

Man dies in the flesh to be reborn in the spirit Man composite of soul and body perishes as do all things which are subject to dissolution but the soul itself a simple spiritual substance is immortal living on after its union with the body is dissolved The immortal soul is sometimes conceived as having many incarnations inhabiting now this body now that in an endless pilgrimage through endless time and sometimes as in the Christian faith each soul has only one embodiment on earth It is specially created by God to inform the body of a human

being It is destined to be his immortal spirit in a future which belongs to eternity rather than to time

Except for the form it takes in the doctrine of reincarnation or the transmigration of souls the idea of immortality is usually attended by conceptions of an after life in another world—the life of the shades in the Elysian Fields or in Hades the life of the blessed in Heaven or of the damned in Hell The after life is never merely a continuation of the life begun on earth The other world is not just an abode for the disembodied soul It is a place of judgment of rewards and punishments in which the soul realizes the good or pays the penalty for the evil toward which its earthly career inclined The connection of immortality with rewards and punishments appears even in the theory of reincarnation for as the soul passes from one embodiment to another it enjoys or suffers the consequences befitting its previous existence

STATED AS A speculative problem the question of immortality is traditionally formulated as a question about the soul or the spirit of man whether it exists by itself either before or after its conjunction with a human body and if so in what manner it subsists For those who affirm the soul's separate existence there seems to be no question about its everlasting endurance either without beginning at all or from the moment of its creation But the manner of the soul's subsistence leads to speculation concerning an after life or an other life in a world of spirits or in realms as far apart as Heaven and Hell

We shall presently consider to what extent such speculations have been submitted to argument and to what extent they have been matters of religious belief But in both these modes

of Hades and dread Prosperine we are told that the Theban prophet Teiresias alone has his reason still unshaken All the other ghosts flit about aimlessly The shades of good men and bad alike languish in the domain of darkness Tityus Tantalus and Sisyphus are subjected to special punishments for their grievous sins and transgressions but all the shades—even of those men whom the gods loved and honored—seem to be in a state of misery Though they are not all beset with torments and agonies, none seems to be overcome with joy or to have reached contentment

Those whom the gods love do not join the denizens on Mount Olympus When they enter the somber realm of Pluto—the deity of the underworld—they like all the other shades whom Charon ferries across the river Styx are more remote from the gods than are mortal men on earth The only exception perhaps is Heracles whom Odysseus meets in Hades or rather his phantom only for he is feasting ever with the immortal gods and has lovely Hebe to wife

The general attitude of all who dwell in the underworld is summed up by Achilles when he tells Odysseus Say not a word in death's favor I would rather be a paid servant in a poor man's house and be above ground than king of kings among the dead And the mother of Odysseus describes the condition of the dead in the abode of darkness as one in which the unweary no longer hold the flesh and bones together these perish in the fierceness of consuming fire as soon as life has left the body and the soul flies away as though it were a dream

Among other ancient peoples such as the Egyptians the Babylonians and the Persians Herodotus found other views of immortality than those which prevailed in Greece He reports for example the doctrine of transmigration or reincarnation—a doctrine which also appears in the myth of Er at the end of Plato's Republic and is alluded to elsewhere in the Platonic dialogues The Egyptians Herodotus writes were the first to broach the opinion that the soul of man is immortal and that when the body dies it enters into the form of an animal which is born at the moment it hence passing on from one animal into another until it has circled through the forms of all creatures

which tenant the earth the water and the air after which it enters again into a human frame and is born anew

Herodotus however seems more interested in the effect of such beliefs on the practices of the living especially their funeral rites and other devotions than he is with the truth of conflicting theories of immortality

The doctrine of a future state according to Gibbon was scarcely considered among the devout polytheists of Greece and Rome as a fundamental article of faith Before the time of Christ the description of the infernal regions had been abandoned to the fancy of painters and of poets who peopled them with so many phantoms and monsters who dispensed their rewards and punishments with so little equity that a solemn truth the most congenial to the human heart was oppressed and disgraced by the absurd mixture of the wildest fictions Lacking an acceptable or satisfying belief yet inclined to believe in as men are inclined to hope for a better life the pagan world Gibbon thinks could not long resist the appeal of Christian teaching When the promise of eternal happiness was proposed to mankind on condition of adopting the faith and of observing the precepts of the Gospel it is no wonder he declares that so advantageous an offer should have been accepted by great numbers of every religion of every rank and of every province in the Roman empire

THE ARGUMENTS for personal immortality which Christian theologians draw from the nature of the human soul do not differ essentially from the proofs offered by philosophers without recourse to religious faith This applies to arguments advanced before Christianity by Plato and Plotinus as well as to those developed by philosophers like Descartes and Locke who belong to the Christian community The exclusively theological aspects of the Christian doctrine of immortality are those matters which since they are beyond the reach of reason belong to faith alone

The doctrine that the individual soul is created and that it has a unique affiliation with one human body is not capable of being proved or defended by reason against the quite opposite theory that the soul has always existed and

Aristotle demands only a complete term of life as a necessary condition for the complete happiness of man. He passes lightly over the question whether the dead share in any good or evil. So far as he considers a *blessedness* which the gods can add to human happiness it does not belong to an after life but consists rather in the good fortune which the gods grant to some men and which increases and secures their happiness beyond that which is attainable by virtue alone.

The moral issue concerning immortality is more explicitly faced by Mill in his examination of the need for religious or supernatural sanctions. While he does not admit their indispensability, neither does he deny their utility. 'There is evidently no reason,' he declares, 'why all these motives for observance should not attach themselves to the utilitarian morality as completely and as powerfully as to any other.' Yet he himself stresses the possibility of giving to the service of humanity even without the aid of belief in a Providence both the psychological power and the social efficacy of a religion.

Mill does not go as far as Lucretius in regarding the belief in immortality with the attendant possibility of everlasting torment for the soul as itself an *immortal doctrine*. For Lucretius it is a nightmare which haunts the waking hours of men filling them with false fears and putting future pains in the way of present pleasures. He dedicates his poem to driving headlong forth that dread of Acheron troubling as it does the life of man from its inmost depths and overspreading all things with the blackness of death allowing no pleasure to be pure and unauoyed.

Where others see in man's fear of death his natural desire for immortality Lucretius thinks it is the dread of immortality which causes man's fear of death. We have nothing to fear after death he says if death is the end. He who exists not cannot become miserable.

IN THE GREAT POEMS of antiquity we find the imagery and detail of the pagan conception of the life hereafter. Both Odysseus and Aeneas visit the underworld. They see the shades of the departed heroes all that is visible to the bodily eye are shimmering wreaths. They talk with the

departed listen to their memories or hear them speak prophetically of the future. From Anchises his dead father Aeneas learns his destiny and Odysseus hears in Hades what has befallen his companions at Troy and his family at home during his years of wandering.

Yet there is a striking difference between Virgil's poem and Homer's with respect to the after life. The division which Virgil makes between Elysium and Tartarus corresponds much more closely than anything in Homer—or for that matter in the other Greek poets—to the Christian distinction between Heaven and Hell. Though Elysium and Tartarus both belong to the underworld one is the abode of the blessed the other a place of torment for sinners.

In the sixth book of the *Aeneid* the Sibyl explains the topography of the underworld to Aeneas. There is a place where splits the road in twain she says

The right leads to the giant walls of Dis  
Our way to Elysium but the left wreaks doom  
On sinners and to guilty Tartarus sends

Tartarus the abode of the condemned is surrounded by a fierce torrent of billowy fire and is filled with the noise of punishment. Elysium on the other hand is

The happy region and green pleasures  
Of the blest woodlands the abode of joy  
An ampler ether with purpureal light  
Clothes here the plain another sun than ours  
And other stars they know

Its inhabitants in sharp contrast with the unfortunate in Tartarus seem to pass their time in peace and pleasure.

Homer makes no such sharp division between the realm of the blessed and the realm of the condemned. Plutarch speaks of the isles of the blessed celebrated by Homer but the reference cannot be substantial. In one passage in the *Iliad* Menelaus is promised that he will be taken to the Elysian plain which is at the end of the world. There fair haired Rhadamanthus reigns and men lead an easier life than anywhere else in the world for in Elysium there fails not rain nor hail nor snow. But even this seems to describe a different life rather than an after life.

So far as the underworld is described on the occasion of Odysseus' descent into the house

of Hades and dread Prospetime we are told that the Theban prophet Teiresias alone has his reason still unshaken All the other ghosts fit about aimlessly The shades of good men and bad alike languish in the domain of darkness Tityus Tantalus, and Sisyphus are subjected to special punishments for their grievous sins and transgressions but all the shades—even of those men whom the gods loved and honored—seem to be in a state of misery Thou b they are not all beset with torments and agonies, none seems to be overcome with joy or to have reached contentment

Those whom the gods love do not join the deities on Mount Olympus When they enter the somber realm of Pluto—the deity of the underworld—they like all the other shades whom Charon ferries across the river Styx are more remote from the gods than are mortal men on earth The only exception perhaps is Heracles, whom Odysseus meets in Hades or rather his phantom only for he is feasting eternally with the immortal gods, and has lovely Hebe to wife.

The general attitude of all who dwell in the underworld is summed up by Achilles when he tells Odysseus "Say not a word in death's face I would rather be a paid servant to a poor man's house and be above ground than king of kings among the dead" And the mother of Odysseus describes the condition of the dead in the abode of darkness as one in which the shades no longer hold the flesh and bones together these perish in the fierceness of consuming fire as soon as life has left the body and the soul flies away as though it were a dream.

Among other ancient peoples such as the Egyptians, the Babylonians, and the Persians, Herodotus found other signs of immortality than those which prevailed in Greece He reports, for example the doctrine of transmigration or reincarnation—a doctrine which also appears in the myth of Er at the end of Plato's *Republie* and is alluded to elsewhere in the Platonic dialogues The Egyptians Herodotus writes, were the first to broach the opinion that the soul of man is immortal, and that when the body dies, it enters into the form of an animal which is born at the moment thence passing on from one animal into another until it has circled through the forms of all creatures

which tenant the earth the water and the air after which it enters again into a human frame and is born anew

Herodotus, however seems more interested in the effect of such beliefs on the practices of the living especially their funeral rites and other devotions than he is with the truth of conflicting theories of immortality

The doctrine of a future state according to Gibbon was scarcely considered among the devout polytheists of Greece and Rome as a fundamental article of faith Before the time of Christ the description of the infernal regions had been abandoned to the fancy of painters and of poets who peopled them with so many phantoms and monsters who dispensed their rewards and punishments with so little equity that a solemn truth the most congenial to the human heart was oppressed and disgraced by the absurd mixture of the wildest fictions Lacking an acceptable or satisfying belief yet inclined to believe in as men are inclined to hope for a better life the pagan world Gibbon thinks, could not long resist the appeal of Christian teaching When the promise of eternal happiness was proposed to mankind on condition of adopting the faith and of observing the precepts of the Gospel it is no wonder he declares that so advantageous an offer should have been accepted by great numbers of every religion, of every rank, and of every province in the Roman empire

THE ARGUMENTS for personal immortality which Christian theologians draw from the nature of the human soul do not differ essentially from the proofs offered by philosophers without recourse to religious faith This applies to arguments advanced before Christianity by Plato and Plotinus as well as to those developed by philosophers like Descartes and Locke who belong to the Christian community The exclusively theological aspects of the Christian doctrine of immortality are those matters which since they are beyond the reach of reason belong to faith alone.

The doctrine that the individual soul is created and that it has a unique affiliation with one human body is not capable of being proved or discredited by reason against the quite opposite theory that the soul has always existed and

inhabits any number of bodies in the course of many reincarnations. The existence of Hell, Purgatory and Heaven as supernatural states of the soul, the time place and manner of the Last Judgment, the resurrection of the body and the difference between the bodies reunited with the souls of the blessed and the damned, the joy of eternal happiness and the misery of eternal damnation—these dogmas of Christian orthodoxy go far beyond all merely philosophical attempts to prove the soul's immortality or to consider its life apart from the body.

The great theologians undertake to do more than expound these articles of faith. Reason asks questions which the man of faith must try to answer defending his faith not by proof but by overcoming doubts by answering objections & making dogmas intelligible. Yet the great theologians admit an irreducible core of mystery. The joy of the soul united to God in the beatific vision surpasses temporal understanding. The mysteries of Hell are perhaps even greater.

The deprivation of God's love and exclusion from His presence constitute a spiritual misery comparable to the beatitude of beholding God and being within the circle of the divine light. One is an infinite anguish of frustration and loss, the other an infinite rest of peace and fulfillment. But the theologians also teach that the damned suffer the pains of sense in Hell as well as the pains of depravation. That hell which also is called a lake of fire and brimstone Augustine says will be material fire and will torment the bodies of the damned. When hell fire and the expiatory punishments of Purgatory are not merely symbols for the imagination they raise extraordinarily difficult questions as both Augustine and Aquinas admit.

Dante asks us to read the descriptions he gives of Hell, Purgatory and Paradise in the *Dante Comedy* in a strictly literal sense as well as in several symbolic meanings such as the moral and the allegorical. But he explains in his own commentary on the poem that the literal meaning also involves symbolism inssofar as the things that the words refer to when taken in their literal sense are themselves the symbols of other things. In any case the poet may be more successful than the theologian in making intelligible through symbol and metaphor what

in its literal significance is strictly unimaginable. The imagery of darkness, sultriness, noise and heaviness which grows more intense as the descent proceeds in the *Inferno* does more than the anguished outcries of the damned to convey the reality of Hell.

The metaphors of music and agility express the harmony of Heaven. But it is especially the symbolism of light which captures the invisible in terms of vision except perhaps when it reaches a climax in the blinding effulgence at the end of the *Paradiso*. As Dante moves upward in the realm of love where courtesy prevails in every speech and charity suffuses every will he sees the mystic rose of Heaven entirely through reflected light. The saints and especially those glorious spirits who instruct his progress become pale mirrors of the ineffable vision which they themselves behold.

Milton too pictures Heaven and Hell but in *Paradise Lost* the destiny of the immortal soul remains a prophecy a consequence of the earthly immortality which Adam lost. Except for the Prologue Hell and Heaven are offstage in Goethe's *Faust* though they are the main implications of the wager Faust makes with Mephistopheles which puts his immortal soul in the balance.

The philosophical issue concerning immortality cannot be separated from issues concerning the existence and nature of man's soul. The various arguments for immortality seem to rest not merely on the reality of the distinction between soul and body but more precisely on the immateriality of the soul. Lucretius for example does not deny the existence of soul nor does he fail to differentiate the soul from the body wherein it is located. The soul according to Lucretius like everything else in the universe consists of atoms. They differ from those of the body by their roundness, smoothness and mobility. They are much smaller than those of which our body and flesh are formed; they are also much fewer in number and are disseminated merely in scanty number through the frame.

On this view of the soul as material in nature and as constituted of many quite separable parts the soul is necessarily as perishable as the rest of the body. When the body has been

shattered by the mastering might of time Lucretius writes, and the frame has drooped with its forces dulled it naturally follows then that the whole nature of the soul is dissolved like smoke into the thin air since we see it is begotten along with the body and grows up along with it and breaks down at the same time worn out with age

It should be observed however that it is not the materiality of the soul but rather its divisibility into parts which accounts for its mortality The atoms after all are material but since as the ultimate units of matter they are simple bodies and so are absolutely indivisible they cannot perish Only the simple is imperishable

The perishability of the simple (i.e. of that which has no parts) occurs as a premise in one of the great arguments for the immortality of the soul In Plato's *Phaedo* which formulates this argument as immortality is discussed in the prison cell where Socrates awaits his execution two assumptions seem to be made first that the soul is the principle of life in animate bodies, for as Socrates says whatever the soul possesses, to that she comes bearing life and second, that as an immaterial being, the soul must be simple for only bodies are composite and "changing"

From the first of these assumptions the argument proceeds in terms of what it means for bodies to be alive or dead Socrates argues from example If any one asks you he says what that is, of which the inherence makes the body hot you will reply not heat but fire Or if any one asks you why a body is diseased you will not say from disease but from fever So if any one asks, what is that of which the inherence will render the body alive? the answer is not life but "the soul As the principle of life itself the soul will never receive the opposite of what she brings, namely death Therefore the soul is immortal.

On the second assumption the endless duration of the soul follows from its simplicity as an immaterial and immutable being The compound or composite Socrates says may be supposed to be naturally capable as of being compounded so also of being dissolved but that which is uncompounded and that only, must be, if anything is, indissoluble When the

soul leaves the body for which it has been both motor and pilot the body ceases to be alive and perishes in the manner of material things the soul lives on freed from temporary bondage to the body its prison house It departs to the invisible world—to the divine and immortal and rational.

The argument from simplicity as repeated in Moses Mendelssohn's *Phaedon* is criticized by Kant Admitting that a truly simple being cannot cease to exist Kant contends that the knowable soul—which is for him the empirical ego or consciousness—may have intensive though it lacks extensive quantity It would therefore be capable of diminution in reality and so it can become less and less through an infinite series of smaller degrees

With regard to the soul as an immaterial and simple substance (i.e. the transcendental ego) Kant is willing to affirm that immortality necessarily belongs to such a nature But he denies that we can have any knowledge of the soul except as a phenomenon of experience There can be no valid theoretic argument for immortality precisely because there can be no scientific knowledge of the nature of transcendental objects—beings beyond all possible experience What Kant calls the paradoxisms of rational psychology are offered to show the dialectical futility of proofs or disproofs of immortality in the same way that the cosmological antinomies attempt to expose the untenability of arguments for or against the infinity of time and space, the infinite divisibility of matter, the existence of a free will and of God

Without deciding whether Kant's theory of experience and knowledge is true thus much we can learn from him about the issue of immortality Those philosophers who like Descartes and Locke think they have grounds for affirming the existence of the soul (or mind or spirit) as an immaterial substance also have grounds for affirming its immortality Those who like Lucretius and Hobbes think they have grounds for denying the existence of anything except material particles also have grounds for denying either the existence of the soul or its having a permanence not possessed by other material wholes And those who, like Hume think there are no grounds for affirming the existence of any kind of enduring substance material or

spiritual—even to the point of doubting personal identity from moment to moment—can admit no grounds for affirming a substantial much less an immortal soul.

ONE OTHER POSITION remains to be considered. Though it does not fall outside the foregoing alternatives Aristotle's theory represents an important variation on one of them. As against Hume or Kant Aristotle holds that substances exist and are knowable. The sensible material things of experience are such substances. But according to Aristotle these substances are not exclusively material. They are composed of two principles matter and form neither of which is a substance capable of existing by itself. As the exposition of this theory (in the chapters on FORM and MATTER) tries to make plain form and matter exist only in union with one another. It is the composite substance resulting from their union which exists in and of itself.

The form which enters into the composition of a substance can be called its substantial form. In relation to the matter with which it is united the substantial form is the actualization of the potentiality in matter to exist as a substance of a certain kind. Not all substances are of the same kind. Some are alive some inanimate and inert. In the case of living substances the substantial form according to Aristotle confers upon matter not only the act of existing as a substance but also the act of being alive. Because it thus differs from the form of an inanimate substance Aristotle gives a special name to the substantial form of a living thing. Because the word soul has long been used to designate the principle of life in living things Aristotle feels justified in using it as the name for the substantial forms of plants and animals as well as men.

This theory and its principal opposite (which regards the human soul as a complete substance not a substantial form) are more fully discussed in the chapter on SOUL. Here we are concerned only with the consequences of Aristotle's theory for human immortality. If as he seems to hold substantial forms exist only insofar as they exist in the substances of which they are the forms then when a composite substance perishes through the decomposition of its matter and

form the form perishes also. Souls—the substantial forms of living things—would seem to be no exception. The soul Aristotle writes, is inseparable from its body or at any rate certain parts of it are (if it has parts)—for the actuality of some of them is nothing but the actualities of their bodily parts. Yet some may be separable because they are not the actualities of any body at all.

The exception which Aristotle seems to have in mind is that part of the human soul which is the intellect. It differs from other powers of the soul he suggests as the eternal from the perishable. It alone he says is capable of existence in isolation from all other psychic powers. He argues that in so far as the realities it knows—or at least some of them—are capable of being separated from their matter, so is it also with the power of the mind.

What is the significance for the immortality of the human soul of the supposed ability of the intellect to act independently of the body? Aristotle answers in terms of the principle that if there is any way of acting or being acted upon proper to soul soul will be capable of separate existence if there is none its separate existence is impossible. If we consider nutrition sensation and emotion there seems to be he admits no case in which the soul can act or be acted upon without involving the body. The one possible exception may be thinking but Aristotle adds at once that if this too proves to be a form of imagination or to be impossible without imagination it too requires a body as a condition of its existence.

Later when he is discussing the power of thought Aristotle flatly insists that the soul never thinks without an image and that no one can learn or understand anything in the absence of sense for when the mind is actively aware of anything it is necessarily aware of it along with an image. According to his own principles it would seem to follow that since thinking proves to be impossible without imagination it too requires a body as a condition of its existence. Hence the intellect is not separable from matter nor is the human soul of which the intellect is the highest power.

Nevertheless Aristotle declares in a passage which has become famous that mind as the active power of thinking is separable un-

possible uncaused and with this declaration of the intellect's separability from matter he seems to affirm immortality at least for the intellectual part of the soul. When mind is set free from its present conditions, he writes, it appears as just what it is and nothing more; thus alone is immortal and eternal.

THE PASSAGES QUOTED have been subject to conflicting interpretations. The Arabic commentators on Aristotle notably Averroes find in them no basis for the immortality of the individual human soul. The texts according to their view support the theory of a single active intellect which exists apart from the minds of individual men—almost a divine principle in the universe which acting on the rational souls of individual men enables them to think and understand. Aquinas argues against them to the opposite conclusion.

Again the Averroists Aquinas contends that if the individual man Socrates can be said to think then whatever powers are required for thinking must belong to his individual nature. The powers required for thinking are according to Aquinas twofold: an active intellect able to abstract the intelligible forms of things from their material representation in sensory images; and a possible or potential intellect capable of receiving these forms when separated from matter by the act of abstraction.

The theory of knowledge and thought which involves us is discussed in the chapters on FORM IDEA MIND and UNIVERSAL AND PARTICULAR. Here we are concerned only with the point which Aquinas makes that since thinking involves universal notions and since forms can be universal only apart from matter the intellect which abstracts and receives abstractions must itself be immaterial. The intellectual powers do not operate through a bodily organ as the power of nutrition operates through the alimentary system or the power of vision through the eye. The brain in other words is not the organ of understanding or thought but rather along with the external sense-organs it is the material organ of perception memory and imagination.

The argument for the immortality of the human soul then proceeds on the premise that that which can exist apart from matter can also

exist apart from matter. The intellectual principle which we call the mind or the intellect has an operation *per se* apart from the body. Now only that which subsists can have an operation *per se* for nothing can operate but what is actual wherefore a thing operates according as it is. Hence Aquinas concludes that the human soul which is called the intellect or mind is something incorporeal and subsistent. The attribution of subsistence to the human soul means that although it is the substantial form of the human body it is also capable of existing in and of itself as if it were a simple substance.
